

FINAL

**ENVIRONMENTAL CONDITION OF PROPERTY
REPORT**

**QUINTA-GAMELIN
U.S. ARMY RESERVE CENTER (RI001)
ASYLUM ROAD
BRISTOL, RI 02809-1221**

Prepared For:

**U.S. Army Corps of Engineers – Louisville District
Engineering Division – Environmental Engineering Branch
600 Dr. Martin Luther King, Jr. Place
Louisville, Kentucky 40202-2232**

MARCH 2007

Certification

All information/documentation provided accurately reflects the environmental condition of the property. This ECP report is in general accordance with the U.S. Department of Defense (DoD) requirements for completion of an Environmental Condition of Property (ECP) report.

GARY PURYEAR
Chief, Environmental Division
94th Regional Readiness Command

DATE

The undersigned certifies the contents of this report are in general accordance with DoD policies for the completion of an ECP.

LENARD GUNNELL, P.G.

Executive Summary

CH2M HILL, under contract to the U.S. Army Corps of Engineers, Louisville District, has prepared this Environmental Condition of Property (ECP) report for the Quinta-Gamelin U.S. Army Reserve (USAR) Center (Facility ID RI001), hereafter referred to as the "Property" or "USAR Center." The Property is on the west side of the city of Bristol, Rhode Island and encompasses approximately 5 acres.

This ECP report was conducted in conformance with the Department of Defense's (DoD's) Base Redevelopment and Realignment Manual, DoD 4165.77-M (BRRM), Army Regulation 200-1, and the American Society for Testing and Materials (ASTM) Designation D6008-96 (2005), *Standard Practice for Conducting Environmental Baseline Surveys*.

This ECP report details the history of the property, including the USAR and any prior tenant uses of the Property and the resulting environmental condition of the property.

In support of the ECP report, CH2M HILL inspected the Property and performed a reconnaissance of the surrounding area on August 1, 2006.

Two permanent structures are onsite - the current U-shaped building surrounding the drill hall, and a two-bay Organizational Maintenance Shop (OMS) building. Various units of USAR have occupied the USAR Center at different times; the 2nd Simulation Unit is currently occupying the Property. Since the U.S. Government acquired the property in 1956 from the Town of Bristol, the Property has served as a USAR Center.

Areas of potential environmental concern on the Property were reviewed and CH2M HILL found a release causing documented stressed vegetation on the north side of OMS building; the wash rack that was known to have received POL products and possibly hazardous substances, that has a failed drain that was replaced and a crack in the pad in the vicinity of the drain; lack of verified closure information for USTs; and possible impacts from an adjacent property undergoing remediation. Additional evaluations also may be needed regarding the alleged landfill that is on the northern part of the Property; and to verify there are no environmental issues associated with the septic system, which was connected to floor drains.

In accordance with DoD policy defining the classifications (see Sherri Goodman memorandum dated 21 October 1996), the Property has been classified as Type 7. This classification does not include categorizing the property based on de minimis conditions that generally do not present material risk of harm to the public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

UST	underground storage tank

1 Introduction

CH2M HILL, under contract to the U.S. Army Corps of Engineers (USACE) Louisville District Engineering Division was authorized to conduct an Environmental Condition of Property (ECP) report for the Quinta-Gamelin U.S. Army Reserve (USAR) Center (RI001). The facility is located on Asylum Road, Bristol, Bristol County, Rhode Island, and is hereafter referred to as the Property or USAR Center. CH2M HILL prepared this ECP report under contract number W912QR-04-D-0020, Task Order No. 0018, with the Louisville District USACE.

A visual non-intrusive reconnaissance of the Property was conducted on August 1, 2006, in support of the ECP. The reconnaissance purpose was to visually obtain information indicating the likelihood of recognized environmental conditions associated with the Property or adjacent properties.

In preparing this ECP report, CH2M HILL gathered information from available records and previous work from others, interviews with individuals purporting to be familiar with the Property, and observations from a site reconnaissance. The accuracy of the information obtained from these sources was not verified by CH2M HILL. As such, CH2M HILL will make no warranty, expressed or implied, relative to the accuracy, completeness, or reliability of the information used to create the records and reports prepared by others.

1.1 Purpose of Environmental Condition of Property

The Military Department with real property accountability shall assess, determine and document the environmental condition of all transferable property in an ECP report. This ECP report is based on reasonably available information. Pursuant to the Department of Defense's (DoD's) policy, set forth in the Base Redevelopment and Realignment Manual (DoD 4165.66-M, March 1, 2006) Section C8.3 (BRRM), the primary purposes of the ECP report include the following:

- Provide the Army with information it may use to make disposal decisions
- Provide the public with information relative to the environmental condition of the property
- Assist in community planning for the reuse of Base Realignment and Closure (BRAC) property
- Assist federal agencies during the property screening process
- Provide information for prospective buyers
- Assist prospective new owners in meeting the requirements under U.S. Environmental Protection Agency's (USEPA's) "All Appropriate Inquiry" regulations
- Provide information about completed remedial and corrective actions at the property

- Assist in determining appropriate responsibilities, asset valuation, and liabilities with other parties to a transaction

The ECP report contains the information required to comply with the provisions of 40 Code of Federal Regulations (CFR) Part 373, which require that a notice accompany contracts for the sale of, and deeds entered into, for the transfer of federal property on which any hazardous substance was stored, released, or disposed of. The Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Section 120(h) stipulates that a notice is required if certain quantities of designated hazardous substances have been stored on the property for 1 year or more—specifically, quantities exceeding 1,000 kilograms (kg) or the reportable quantity, whichever is greater, of the substances specified in 40 CFR 302.4 or 1 kg of acutely hazardous waste as defined in 40 CFR 261.30. A notice also is required if hazardous substances have been disposed of or released on the property in an amount greater than or equal to the reportable quantity. Army Regulation (AR) 200-1 requires that the ECP report address asbestos, lead-based paint (LBP), radon, and other substances potentially hazardous to human health.

This ECP report used the American Society for Testing and materials (ASTM) Designation D6008-96 (2005), *Standard Practice for Conducting Environmental Baseline Surveys*, the BRRM, CERCLA §120, and AR 200-1.

1.2 Scope of Services

This ECP report covers the site survey and assessment of the environmental condition of the 5.3-acre Quinta-Gamelin USAR Center located on Asylum Road, Bristol, Rhode Island. All site maps, figures, and aerial photographs referenced herein are provided in Appendix A, while Appendix B contains the photographs taken during the August 1, 2006, site reconnaissance. Property warranty deeds and chain of title information, and lease or permit agreements if applicable are provided in Appendix C when they are available. Relevant historical environmental documents and reports are provided in Appendix D, while Appendix E contains the Environmental Data Resources, Inc. (EDR) radius search reports commissioned for this effort.

This ECP report classifies the property into one of seven DoD Environmental ECP categories as defined by the DoD policy issued in October 1996 on the categorization of property to be transferred using BRAC procedures (see Sherri Goodman memorandum dated 21 October 1996) and using for additional guidance the ASTM Designation D5746-98 (2002), *Standard Classification of Environmental Condition of Property Area Types for Defense Base Closure and Realignment Facilities*. The property classification categories are as follows:

- ECP Area Type 1—An area or parcel of real property where no release or disposal of hazardous substances or petroleum products or their derivatives has occurred (including no migration of these substances from adjacent properties).
- ECP Area Type 2—An area or parcel of real property where only the release or disposal of petroleum products or their derivatives has occurred.

- ECP Area Type 3— An area or parcel of real property where release, disposal, or migration, or some combination thereof, of hazardous substances has occurred, but at concentrations that do not require a removal or remedial action.
- ECP Area Type 4— An area or parcel of real property where release, disposal, or migration, or some combination thereof, of hazardous substances has occurred and all remedial actions necessary to protect human health and the environment have been taken.
- ECP Area Type 5— An area or parcel of real property where release, disposal, or migration, or some combination thereof, of hazardous substances has occurred and removal or remedial actions, or both, are underway, but all required actions have not yet been taken.
- ECP Area Type 6— An area or parcel of real property where release, disposal, or migration, or some combination thereof, of hazardous substances has occurred, but required response actions have not yet been initiated.
- ECP Area Type 7— An area or parcel of real property that is unevaluated or requires additional evaluation.

2 Site Location and Physical Description

2.1 Site Location

The Quinta-Gamelin USAR Center is located in Bristol County, on the west side of the city of Bristol, Rhode Island, along Asylum Road (Figure 1, Appendix A). The 5.3-acre parcel is situated on the north side of Asylum Road and is surrounded on other property boundaries by unimproved land and a cemetery. Colt State Park and the East Bay Bike Path (former railroad bed) are west of the Property.

The Property is on a peninsula between Narragansett Bay and Bristol Harbor. It is approximately 0.4 mile east of Narragansett Bay and 0.3 mile north of Bristol Harbor.

2.2 Asset Information

Facility Name and Address:	Quinta-Gamelin U.S. Army Reserve Center Asylum Road Bristol, Rhode Island
Property Owner:	United States Government
Date of Ownership:	1956
Current Occupant:	2nd Simulation Unit
Zoning:	R-10, Residential
County, State:	Bristol, Rhode Island
USGS Quadrangle(s):	Bristol, Rhode Island
Latitude/Longitude:	41°41'15.1"N, 71°17'09.4"W
Legal Description:	The transfer authorization document containing the legal description is included in Appendix C.

2.3 Physical Description

The USAR Center contains two permanent structures and three parking lots (Figure 2, Appendix A). Construction of the main building was originally completed in 1957, but it was demolished, and a new 14,755-square-foot facility to serve the same purpose was constructed in 1988. Construction of the 2,688-square-foot, two-bay Organizational Maintenance Shop (OMS) building was completed in 1959. Both structures are on concrete foundations and consist of concrete block walls covered with a brick exterior.

The main building is a U-shaped one-level structure around a two-story drill hall. The building's interior consists of office space, classrooms, kitchen area (including grease trap),

storage, former indoor firing range, boiler room, and a drill hall. The north wall of the drill hall contains a roll-type garage door for vehicle access and a personnel door.

The OMS building, a 50-foot by 46-foot structure, is located about 50 feet north of the rear of the drill hall. There are two roll-type garage doors on the south side of the building that open into two bays previously used for light vehicle maintenance. One personnel door is located on the west side and one is on the east side of the building.

The vehicle wash rack area is located adjacent to the western wall of the OMS building. It consists of a concrete pad sloping from all sides toward the center (Photograph 2, Appendix B). At the center of the pad is a drain. There is no oil/water separator (OWS) associated with this drain. A 1996 floor drain survey (ENSR, 1996) could not identify the outfall for the drain.

A military equipment parking (MEP) area and a privately owned vehicle (POV) parking area also are contained within the Property. Chain-link security fencing topped with barbed wire encloses the MEP and POV areas to the west of the OMS building. The main building, OMS building, and POV area in front of the main building are open to Asylum Road through a paved driveway.

Impervious surface features such as asphalt parking areas, driveways, concrete walkways, and building footprints cover approximately half of the Property. The remaining land is grassed with a sparse population of evergreen trees clustered in the west and northwest of the Property.

2.4 Site Hydrology and Geology

The USAR Center and Bristol are located within the Atlantic Seabed Lowland Region of New England Physiographic Province. The geomorphic province of southern New England is known as the Atlantic Coastal Plain Province, and it is characterized by diverse surficial and bedrock geology (RI Project Facilities, date unknown). Surface elevations range from 100 feet above mean sea level (msl) to 40 feet above msl in the Bristol area. The topography at the Property is uneven, with a general decrease in elevation toward the southwestern corner of the parcel. The original topography was altered somewhat during building construction to create a terrace for the buildings, by cutting into the south side of a hill on the Property.

2.4.1 Surface Water Characteristics

The Property is located within the Narragansett Bay drainage basin. Figure 9 in Appendix A provides a portion of the 1970 Bristol, Rhode Island United States Geological State (USGS) topographic map, which includes the Property. As shown, the Property is situated at an elevation of approximately 47 feet above msl and is located on the south side of a hill adjacent to Colt State Park and the Poppasquash Farms National Historic District. The hill slopes gently toward Bristol Harbor in the southwest direction. The closest major surface water features to the Property are Narragansett Bay and Bristol Harbor, which are located approximately 0.4 mile due west and 0.3 mile due south, respectively.

The only surface water feature located in the immediate vicinity of the Property is a seasonal pond on the west side of the Property, as identified in historical records. At the time of the site reconnaissance, the pond to the west of the Property did not have water, and site personnel interviewed think the pond is on Colt State Park property and not part of the USAR Center (Photograph 9, Appendix B).

There are three outfalls (OF 1, OF 2, and OF 3) through which stormwater leaves the facility (Figure 2, Appendix A). Surface water runoff in the MEP area and POV parking areas flows to storm drains located in these areas. The storm drains are connected to OF 2, which discharges to the seasonal pond located to the west of the Property.

Surface water runoff from the grassy area located at the northern end of the Property beyond the POV area collects in a ditch that discharges to OF 1 in the northwestern corner of the Property. OF 1 also discharges to the seasonal pond. Surface water runoff from the grassy area to the east and northeast corner temporarily collects in a low-lying area in the northeast corner (Photograph 10, Appendix B) before flowing southward through a ditch in the eastern end of the Property to OF 3. OF 3 is a culvert pipe in the median between the westbound and eastbound lane of Asylum Road, and this outfall discharges to Narragansett Bay.

According to the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map, Community Panel 44001C0013F, the Property is not included in the 100-year floodplain elevation. Figure 4 in Appendix A provides a map depicting the extent of the nearest 100-year floodplain in relation to the Property.

2.4.2 Hydrogeological Characteristics

Bedrock under the facility is the Rhode Island Formation of Pennsylvanian age and consists of sedimentary sandstone, shale, conglomerate, and meta-anthracite coal beds. Glacial till plains from the Wisconsin Stage comprise the surficial geology. They consist of unconsolidated materials such as unsorted glacial till and well-sorted sand, gravel, and silt (RI Project Facilities, date unknown).

According to information acquired from the Soil Conservation Service's State Soil Geographic Database (STATSGO) and EDR data search for Bristol County, specific types of soil at the Property are from the Pittstown and Urban Land Series. The Pittstown and Urban Land Series are both listed as partially hydric soils.

The undisturbed surface soils are generally silty loams and were formed on glacial upland hills. These soil types have slow infiltration rates with layers impeding downward movement of water and are characterized as soils with fine textures. In a typical profile, the surface layer is approximately 8 inches thick and is a silty loam. The subsoil is approximately 20 inches thick and is silty loam. The lower horizon channey-silt loam (granular material of silty or clayey gravel and sand) is encountered at depths ranging from 28 to 60 feet.

The near-surface groundwater occurs under generally unconfined conditions at depths approximately 3 to 6 feet below the surface. From the topography and surface water body locations, groundwater flow direction is southwest toward Narragansett Bay and Bristol Harbor.

2.5 Site Utilities

Water Service—The City of Bristol provides potable water service to the Property.

Sanitary Sewer System—The Property has its own septic tank and leach field. The primary source of wastewater that is directed to the septic tank and leach field includes non-process wastewater (bathrooms, sinks, etc.), and water from the floor drains. Though not confirmed, the septic tank also may receive rinse water from the wash rack.

Gas and Electric—Facility Management buys propane gas from different independent suppliers to fill onsite propane tanks, while National Grid Electric Company provides electric service to the Property.

2.6 Water Supply Wells and Septic Systems

Based on a review of available historical site and agency records and interviews with site personnel, there are no water supply wells located currently or historically at the Property. Potable water is supplied by the City of Bristol.

Twelve floor drains were noted in the *Floor and Storm Drain Inventory and Natural Resource Inventory* (ESNR, 1996). With the exception of the floor drain in the arms vault, which had been removed, all floor drains were verified as still in use and discharged to the leach field.

All buildings on the Property are serviced by a septic tank system and leach field. The system is designed for a normal sewage load from the office and classroom restrooms, plus some cooking oil and grease from the kitchenette. All the floor drains are designed to connect to the leach field, according to plans reviewed during the 1994 floor drain inventory. A telephone conversation with the Superintendent of the City of Bristol Water Pollution Division on September 1, 2006, confirmed that there is no record indicating the USAR Center is connected to the city's sanitary system.

Conflicting information exists in the 1994 drain inventory (ESNR, 1994) for drains in the OMS building. Page 1 of the inventory indicates that no floor drains exist in the OMS building. Under Section 7.1.m., the same report states, "OMS work pits were inventoried as containing a floor drain based on information from facility personnel. The presence of a floor drain in the work pit could not be confirmed by visual observation because the work pits [Photograph 5, Appendix B] were either cemented in, covered by equipment, filled with water, or the sump of the work pit was covered by a grate which could not be removed." If the floor drain existed, oil, grease, and cleaning solvents may have been directed from the floor drain in the vehicle maintenance shop to the septic system. At the time of the 1994 drain survey, the facility was still connected to its own septic tank and leach field. ESNR confirmed this information with the local water and sewer board. A reference also was found that indicated a new septic system was installed in 1988 (ECAS, 1993).

Because of this conflicting information, RRC staff provided photographs of a typical work pit constructed for the 94th RRC. These work pits contained a sump without a floor drain. Although it cannot be confirmed if this work pit had only a sump, since it has been filled in, this work pit was most likely constructed in a similar manner to the other 94th RRC work pits, and therefore did not have a drain to the septic tank.

3 Site History

3.1 History of Ownership

Review of available historical records (chain of titles for the Property and deed of transfer dated September 4, 1956 [Appendix C]) indicated that the U.S. Government purchased the 5.3 acres of land from the Town of Bristol on September 4, 1956. The Town of Bristol acquired the Property from Lebaron B. Church and William B. Church on July 14, 1866. It has remained an asset of the Government to the present day without interruption.

3.2 Past Uses and Operations

A review of the 1951 aerial photograph and the 1955 topographic map (Figures 3 and 8, Appendix A) indicates that the land was used for farming before the USAR Center was constructed. Construction of the main building was completed in 1957, and the OMS building was completed in 1959. The Property has served as a reserve and mobilization center for USAR since the U.S. Government acquired the land.

The Property primarily functioned as an administrative, logistical, and educational facility, with limited maintenance of military vehicles occurring in the OMS building. The Property was historically used by reservists for drill activities on various weekends throughout the year. The 2nd Simulation Unit is the unit currently occupying the USAR Center. The mission of this unit is to provide tactical training to reservists. At the time of the site reconnaissance, the main building contained various items, including desks, office furniture, and folding tables.

Site records indicate vehicle maintenance was not being performed in the OMS building from 1995 to the present. Site interviews could not confirm the last time vehicle or military equipment maintenance was performed in the OMS building. According to the Rhode Island Historic Preservation and Heritage Commission Historic Property Data Collection Form (PAL, 1995), the OMS building was classified as a motor vehicle garage that was used to perform routine maintenance on assigned unit vehicles and to store the same vehicles. The same report stated that the "types of maintenance included oil changes, lubrication, battery filling, light running repairs, tire changing, light bulb replacement, and minor painting, tuning, and washing. More complicated repairs were sent to a regional facility." Photograph 5 in Appendix B shows a portion of a rectangular outline of a separate concrete pour in the floor of the OMS building (lower right corner of the photograph). The corner of the rectangle is below the ladder shown in the photograph. The outline identifies one corner of a former work pit that was filled in and sealed with a concrete top. By 1995, the OMS building also was used for unit equipment storage, so that most of the unit-assigned vehicles had to be stored outside.

At the time of the site reconnaissance, the OMS building contained dry non-vehicle maintenance supplies. Photographs 5 and 6 in Appendix B shows cages in the OMS building for storing 5-gallon containers of salt melt, electrical bulbs, office stationery, and

personal field equipment of reservists who just returned from active duty. The eastern section of the OMS building has been converted to and is now used as a classroom.

No military vehicles were observed at the time of the Property visit. The unit currently occupying the Property does not have military vehicles assigned to it.

Historical aerial photographs and topographic maps were the primary source of information on the past use and operations at the Property. Figures 3 and 5 through 10 in Appendix A provide USGS topographical maps from 1955, 1970, and 1975 and aerial photographs from 1951, 1976, 1981, and 1992 views of the Property and surrounding areas.

The 1955 USGS topographical map (Figure 8, Appendix A) shows the location of Property and areas to the north, east, west, and south as undeveloped. The only identifiable feature here at this time is the North Cemetery, established in 1822. The city of Bristol is established to the north and southeast. The 1970 and 1975 USGS topographical maps (Figures 9 and 10, Appendix A) show both the L-shaped main building and OMS building.

The 1951 aerial photograph (Figure 3, Appendix A) shows the location of the Property and adjacent properties on all sides as what appears to be farmland. A 1962 aerial photograph shows the old L-shaped administrative building and the OMS building on the Property. Adjacent properties at this time appeared relatively unchanged from the 1951 aerial. The 1972 and beyond aerial photographs show the Property, but adjacent properties look like wooded areas instead of farmland.

The 1992 aerial photograph (Figure 7, Appendix A) shows the present U-shaped main building and the OMS building. The area north and west of the Property is vacant and appears undisturbed.

3.3 Past Use, Storage, Disposal, and Release of Hazardous Substances

3.3.1 Past Use and Storage of Hazardous Substances

Information related to the past use and storage of hazardous substances at the Property was compiled through review of available site records, search of federal and state environmental databases, and interviews with Army Reserve personnel. Common janitorial and building maintenance products (motor oil, heating oil, and paints) were observed during the site reconnaissance, and hazardous substances have historically been stored on the Property. These substances include batteries, paint, pesticides, corrosive materials (a chemical agent training set), and cleaning solvents.

3.3.2 Past Disposal and Release of Hazardous Substances

Information related to past disposal and potential release of hazardous substances at the Property was compiled through review of available site records, search of federal and state environmental databases, and interviews with Army Reserve personnel. According to Army Reserve personnel and site records, onsite storage and an accidental release of hazardous materials or wastes may have occurred at the Property. The basis for this statement is found in the draft environmental compliance assessment survey (ECAS) report (Fort Devens,

1993), which references an observation of stressed vegetation on the north side of the OMS building in December 1992. The problem existed at least since March 1989, when a site investigation was requested to assess the cause of the stressed vegetation. Facility personnel employed at the time indicated that drums of waste automotive products were once stored there.

The second possible release may be associated with the sump area of the wash rack. Apparently there is no OWS, and the outfall for the wash rack area cannot be located (ENSR, 1996). During the 1992 ECAS site visit, team personnel noted that "close examination of the sump area resulted in a pungent diesel odor." During the 2006 site reconnaissance, there was a crack in the concrete extending across the wash rack, adjacent to the drain (Photograph 2, Appendix B). The photograph also shows the area around the drain has been repaired, and based on the elevated level of the current drain, repairs or modifications to the sump are likely to have occurred.

The draft ECAS report (Fort Devens, 1993, Section 1.2.7) also made reference to a past landfill on the site. It states, "The facility has not been screened for past use of hazardous substances and the potential for contamination, especially since a portion of the site is suspected to have been used as a landfill in the past." No additional documentation or proof of the existence of the landfill was found. Available aerial photographs dating back to 1951 were reviewed. Conclusive evidence of whether or not a portion of the property was part of a landfill was not ascertainable from the photographs.

No stained soil or stressed vegetation was observed during the August 2006 site reconnaissance. Additionally, the MEP area and POV parking area did not show any signs of staining, and no noxious or foul odors were noted during the site reconnaissance.

3.4 Past Presence of Bulk Petroleum Storage Tanks

Based on a review of available site records, a search of federal and state environmental databases, and interviews with Army Reserve personnel, three heating oil underground storage tanks (USTs) were previously located at this facility. One of the USTs (a 3,000-gallon tank) was removed in 1988. A no further action (NFA) report was submitted to the Rhode Island Department of Environmental Management (RIDEM), and RIDEM approved the NFA and issued a closure certificate dated May 16, 1988.

In a letter dated September 29, 2000, RIDEM granted approval to the USAR Center to remove the remaining two tanks (3,000-gallon and 1,000-gallon) on October 5, 2000. A record search with the RIDEM UST Office revealed a Closure Inspection Checklist completed on October 5, 2000, for the tank removals. The inspection checklist requested a closure assessment be conducted at the tank removal locations. A follow-up telephone conversation with RIDEM UST program personnel confirmed there is no record to indicate that the request of closure assessment has been performed, and thus, the tanks are not considered closed by his office, as there is no closure certificate for the two tanks.

Three 1,000-gallon propane aboveground storage tanks (ASTs) are located at the Property. The date of installation of these tanks was not immediately available; however, an information plate on one of the tanks indicates the tank's manufacture date of 1998. The ASTs store propane gas for heating the buildings on the Property.

3.5 Review of Previous Environmental Reports

A review of site records produced several reports pertaining to the Property. The following subsections provide a brief summary of these reports. Copies of the reports, unless otherwise specified, are provided in Appendix D.

3.5.1 1992 Environmental Compliance Assessment Report

The Fort Devens 416th Engineer Command performed an internal survey for the USAR Center in 1992, listing and evaluating areas on the Property where environmental concerns were apparent. Several areas were noted as needing correction at the time of the assessment. Examples of concerns listed at the time include absence of tank registration, use of improper petrometer tank level meter, lack of meter calibration, absence of the observed wash rack on the blueprints, observation of asbestos, and stressed vegetation due to past drum storage. According to the report, none of the deficiencies observed posed an immediate risk to the environmental condition at the Property.

3.5.2 1994 Asbestos Survey Report and Operations and Maintenance Plan

Covino Environmental Consultant of Woburn (Covino, 1998), acting on behalf of ABB Environmental Services Inc. of Wakefield, Massachusetts, conducted a survey in late 1994 and prepared a report of asbestos-containing material (ACM) occurrence in the buildings on the Property. Potential types, quantities, locations, and conditions of asbestos were examined in the report.

3.5.3 Floor and Storm Drains Inventory and Natural Resources Inventory

A report entitled *Floor and Storm Drains Inventory and Natural Resources Inventory* was prepared for the 94th Regional Readiness Command (RRC; ENSR, 1996) in an effort to inventory and manage natural resources found at 94th RRC facilities in Rhode Island. The report noted that the Quinta-Gamelin USAR Center did not contain any key rare species, or any endangered or threatened plants and animals. Appendix D contains a copy of the *Floor and Storm Drains Inventory and Natural Resources Inventory*.

The report also identified 12 floor drains, all of which were still in use except for the drain in the arms vault that had been removed. Seven storm drains and a wash rack also were identified. Efforts were made to confirm the outfall and pre-treatment for the wash rack drain, and the outfalls for some of the stormwater drains, but the report authors were unsuccessful in these efforts. They did confirm that the Property has its own septic system. The survey concluded that all the drains were in use and discharged to the leach field. The survey is included in Appendix D.

3.5.4 Archaeological and Historical Survey

Public Archaeology Laboratory, Inc. (PAL, 1995) conducted archaeological and historical surveys for six Rhode Island 94th RRC project facilities, including the Quinta-Gamelin USAR Center. This survey divided the Property into two areas of archaeological sensitivity for intact cultural resources. Only the northeast corner of the Property, which contains undisturbed soil and "original" topographic contour lines, is rated as "moderate to high archaeological sensitivity for containing prehistoric deposits." This area is an estimated

22,600 square feet in size. The remainder of the Property has been too disturbed to be of any archaeological importance.

4 Adjacent Properties

Adjacent property land uses are significant to the ECP process, as these current or past uses may have an environmental impact on the USAR Center. Adjacent properties were included in the EDR report review for this reason. Typically, adjacent properties within 0.25 mile of the USAR Center property boundaries are reviewed and visually surveyed. For the purposes of this ECP, the adjacent property reconnaissance was performed from the USAR Center property boundaries and from public access points. Historical aerial photographs and topographic maps also were reviewed for conditions or activities that may have had an environmental impact on the Property.

4.1 Land Uses

Land use south of the USAR Center is Asylum Road that connects the city of Bristol to Narragansett Bay. The road is divided with a 50-foot grassy median beneath which is a culvert that carries runoff to the bay. A parking lot for Colt State Park visitors is directly south of the USAR Center on the south side of the Asylum Road.

The North Cemetery, established in 1822, is located due east and northeast of the USAR Center.

The property directly north and west of the USAR Center is Colt State Park. The 465-acre park was established in 1965. Within Colt State Park and immediately west and southwest of the Property is Bristol Town Beach and Sport Complex located approximately 0.25 mile west of the Property. The East Bay Bike Path, constructed on a former railroad bed, forms the eastern edge of the park and separates the park from the USAR Center.

4.2 Findings

The EDR database search results and visual survey from public points were used to look for evidence that adjacent properties may have past or present environmental issues that would impact the USAR Center.

According to an EDR report dated July 28, 2006, no activities in any of the adjacent properties have the potential to affect environmental conditions on the Property, with the exception of one leaking underground storage tank (LUST) site, discussed in Section 5. Groundwater in this area is believed to flow southwest from the North Cemetery toward the Property.

Water well databases at the federal and state level were reviewed to identify any water supply source near the Property. No water supply source is located within 1 mile of the Property.

Land uses at adjacent properties appear to have changed significantly over the years, based on a review of available aerial photographs. The Property and areas surrounding it (with the exception of the North Cemetery to the east and northeast) was open fields used for

agricultural purposes in 1951. The 1962 aerial photograph shows development on the Property, with adjacent area land uses remaining unchanged. The 1972 aerial photograph shows a significant difference from the 1962 photograph; trees and wooded areas have replaced farmlands seen in the 1962 photographs. A review of Colt State Park history (<http://www.riparks.com/colthistory.htm>) reveals the 465 acres of land for the park was purchased in 1965. The 1972, 1976, 1981, and 1992 aerial photographs indicated little change in the adjacent property land use. Based on a 1992 aerial photograph and the site survey, no changes from the 1993 aerial were noted.

5 Review of Regulatory Information

An essential component of an ECP is the review of records and databases containing information on the Property and adjacent properties. The review includes reasonably obtainable federal, state, and local government records, and is intended to identify a release or likely release of any hazardous substance or any petroleum product, which is likely to cause or contribute to a release or threatened release of any hazardous substance or any petroleum product to the Property.

The majority of the regulatory information for this ECP was obtained from EDR on July 28, 2006. EDR provides a regulatory database summary that consolidates standard federal, state, local, and tribal environmental record sources based on ASTM-recommended minimum search distances from the Property.

All findings reported in Sections 5.1, 5.2, and 5.3 are from the EDR report unless otherwise noted. A copy of the complete EDR report is included in Appendix E.

5.1 Federal Environmental Records

5.1.1 Federal National Priorities List Sites within 1 Mile

USEPA maintains a record of the nation's worst uncontrolled or abandoned hazardous waste sites, known as the National Priorities List (NPL). Sites on the NPL undergo long-term remedial action under CERCLA. The USAR Center is not an NPL site, nor were any such sites located within 1 mile of the Property.

5.1.2 Federal Comprehensive Environmental Response, Compensation and Liability Act Information System Sites within 0.5 Mile

The CERCLA Information System (CERCLIS) contains data on potentially hazardous waste sites that have been reported to USEPA by state, municipalities, private companies, and private persons, pursuant to Section 103 of the Act. CERCLIS contains sites that either are proposed to be or are on the NPL and sites that are in the screening and assessment phase for possible inclusion on the NPL.

The USAR Center is not a CERCLIS site, and there are no CERCLIS sites located within 0.5 mile of the Property.

5.1.3 Resource Conservation and Recovery Act Corrective Action Sites within 1 Mile

Resource Conservation and Recovery Act (RCRA) corrective action sites (CORRACTS) represent facilities that have generated or managed hazardous wastes and require corrective action. The USAR Center is not a CORRACTS.

One CORRACTS was identified within 1 mile of the USAR Center. Albin Manufacturing Inc. is located within 1 mile of the USAR Center, approximately 3,742 feet northeast of the

Property. While there are violations associated with the hazardous waste satellite accumulation area for this site, there is no ongoing investigation or remediation that indicates offsite migration from this adjacent property that will affect the environmental condition of the Property.

5.1.4 RCRA Treatment, Storage, and/or Disposal Sites within 0.5 Mile

RCRA defines and regulates sites that generate, transport, store, treat, and/or dispose (TSD) of hazardous wastes. The RCRA Information System (RCRIS) includes selective information on these sites.

The USAR Center is not a RCRIS TSD site, and there are no such sites located within 0.5 mile of the Property.

5.1.5 Federal RCRA Small and Large Quantity Generators List within 0.25 Mile

Conditionally exempt small quantity generators are defined as facilities generating less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. RCRA small quantity generators are defined as facilities generating between 100 and 1,000 kg of hazardous waste per month. A facility generating more than 1,000 kg of hazardous waste or over 1 kg of acutely hazardous waste per month is defined as a large quantity generator.

The USAR Center is not listed as an RCRA-registered small or large quantity generator, and there are no such sites located within 0.25 mile of the Property.

5.1.6 Federal Emergency Response Notification System List

The Federal Emergency Response Notification System (ERNS) list maintains information on reported releases of oil and hazardous substances. The USAR Center is not on this notification list.

5.2 State and Local Environmental Records

Most of the information presented in this subsection was obtained from the EDR report. Additional information was obtained from online database searches of the Rhode Island's Web site. Occasionally, state and local agency personnel were interviewed via telephone to answer questions about any database issues.

5.2.1 State Lists of Hazardous Waste Sites within 1 Mile

The USAR Center is not on the state list of hazardous waste sites. Seven adjacent properties within 1 mile of the Property were listed as having a hazardous waste site. None of these sites has violations relating to hazardous waste against it and are thus believed not to pose an environmental threat to the Property.

5.2.2 State-Registered Landfills or Solid Waste Disposal Sites within 0.5 Mile

According to the database search, the USAR Center does not have an active or regulated solid waste landfill, incinerator, or transfer station within the Property boundaries. No adjacent properties within 0.5 mile of the USAR Center have a solid waste landfill, incinerator, or transfer station.

5.2.3 State-Registered Leaking UST Sites within 0.5 Mile

In addition to information obtained from the EDR report, the Rhode Island Division of USTs maintains a comprehensive database of LUST sites. The USAR Center is not listed in the state LUST database.

One LUST site is located within 0.5 mile of the Property. Bristol Express (formerly Sunoco) is located approximately 1,891 feet (0.36 mile) east of the Property on Hope Street and has an active LUST record that requires investigation and remediation. This site is upgradient of the Property, and therefore, any offsite migration from this site may potentially impact the USAR Center. Details of offsite migration, investigation, and remediation at this site were not available for preparation of this report.

5.2.4 State-Registered UST Sites within 0.5 Mile

Review of the EDR report and the state of Rhode Island's UST database indicates that there are no UST sites within 0.5 mile of the USAR Center.

5.2.5 State Spills Incidents

The USAR Center is not listed on the Rhode Island state petroleum spill list.

5.2.6 Records of Contaminated Public Wells within 0.5 Mile

The City of Bristol Water and Sewer Board does not own or operate any municipal water supply wells within 0.5 mile of the USAR Center.

5.2.7 Voluntary Remediation Program Sites within 0.5 Mile

The USAR Center is not listed in Rhode Island's Brownfield Program (the successor to the Voluntary Cleanup Program). No sites located within 0.5 mile of the Property are listed as being in the Brownfield Program, either.

5.2.8 State-Registered Bulk Fertilizer and Pesticide Storage Facilities within 0.25 Mile

The USAR Center is not registered with the state as a bulk fertilizer and pesticide storage facility. Additionally, no adjacent properties within 0.25 mile were registered as one of these facilities.

5.3 Unmapped Sites

Some sites within the databases EDR searches have the same zip code as the USAR Center, but no street address. These sites, known as unmapped or orphan sites, cannot be mapped from the EDR results alone. Additional efforts described herein were made to locate these sites and assess their environmental importance to the USAR Center.

Using the mapping utility provided at maps.google.com, the locations of the orphan sites were identified and mapped. One of the sites, Buttonwood Industrial Park, was found on the Rhode Island State Hazardous Waste Site (SHWS) list, but the site is located approximately 1.3 miles southeast of the Property. This distance is outside the 1-mile ASTM

search radius distance. None of the other orphan sites is listed on any other federal, state, or local environmental databases searched during the data gathering process.

5.4 Summary of Properties Evaluated to Determine Risk to the Property

To summarize Sections 5.1 through 5.3, two separate properties, near or adjacent to the USAR Center, were evaluated as potential risk properties to the Property. These adjacent properties evaluated were identified as a result of information obtained during area reconnaissance, interviews, and regulatory database searches, and are summarized below in Table 1.

Based on an evaluation of available site information and details concerning the properties listed in Table 1, one of the facilities evaluated (Bristol Express) exhibits significant environmental conditions that may affect the environmental conditions at the Property.

TABLE 1
 Properties Evaluated for Potential Environmental Risks
Quinta-Gamelin USAR Center, Bristol, Rhode Island

Company/Site	Database	Elevation Relative to Property?	Potential Impact on the Property?	Comments
Bristol Express (formerly Sunoco)	LUST, UST	Higher	Yes	Active LUST investigation/remediation. No violations associated with USTs.
Albin Manufacturing Inc.	RCRA SQG, FINDS, and CORRACTS	Higher	No	Although violations exist for this site, all violations have been brought into compliance.

CORRACTS—Resource Conservation and Recovery Act corrective action sites
 FINDS—Facility Index System/Facility Registry System
 LUST—leaking underground storage tank
 NFA—no further action
 RCRA SQG—Resource Conservation and Recovery Act small quantity generator
 UST—underground storage tank

6 Site Investigation and Review of Hazards

Findings documented in the following subsections are based on the August 1, 2006, site reconnaissance, a review of available site records, and information obtained from USAR personnel.

6.1 USTs/ASTs

A heating oil UST associated with this facility was removed in 1988, and an NFA report was submitted to RIDEM. The agency approved the NFA and issued a closure certificate dated May 16, 1988.

Two other USTs were removed in 2000, but no closure record was located during this ECP survey. A record search with the RIDEM UST Office revealed a Closure Inspection Checklist completed on October 5, 2000, for the tanks removal. The inspection checklist requested a closure assessment be conducted at the tank removal locations. A follow-up telephone conversation with a Senior Inspector with the RIDEM UST program, confirmed there is no record to indicate that the request of closure assessment has been performed, and thus, the tanks are not considered closed by his office, as there is no closure certificate for the two tanks.

Three 1,000-gallon propane ASTs are located at the Property. The ASTs were installed around 1998 to store propane gas for heating the buildings on the Property. At the time of the reconnaissance survey, the exterior of the tanks were in good condition. Photograph 3 in Appendix B shows the placement of and current condition of these tanks.

6.2 Inventory of Chemicals/Hazardous Substances

Available records indicate that hazardous materials have been stored at this facility. These materials include batteries, old paint, pesticides, and corrosive materials (a chemical agent set). During the 2006 site reconnaissance, paint and common household janitorial supplies were observed stored in the storage cage in the OMS building.

The USAR Center uses a licensed commercial company for herbicide and pesticide management.

6.3 Waste Disposal Sites

The draft ECAS report (Fort Devens, 1993, Section 1.2.7) made a reference to a past landfill on the site. It states, "The facility has not been screened for past use of hazardous substances and the potential for contamination, especially since a portion of the site is suspected to have been used as a landfill in the past." No additional documentation or proof of the existence of the landfill was found. Available aerial photographs dating back to 1951 were

reviewed. Conclusive evidence of whether or not a portion of the Property was part of a landfill was not ascertainable from the photographs.

6.4 Pits, Sumps, Drywells, and Catch Basins

During the site reconnaissance, many storm drains were observed in both the MEP and POV parking lots. Review of available records shows all these are connected to an outfall that discharges to a seasonal pond west of the Property (ENSR, 1996). The same report could not establish the outfall point for the drain and associated sump in the center of the wash rack area. During the 2006 site reconnaissance, there was a crack in the concrete extending across the wash rack, adjacent to the drain (Photograph 2, Appendix B). The photograph also shows the area around the drain has been repaired, and based on the elevated level of the current drain, repairs or modifications to the sump are likely to have occurred.

ENSR (1996) also identified a work pit inside the OMS building. According to this report, site personnel indicated there was a drain associated with the work pit. ENSR could not confirm the existence of the drain in the work pit. Photograph 5 in Appendix B shows the outline of one corner of the former work pit in an area currently used for the storage of dry goods. A photograph representing the inside of typical work pits found in facilities within the 94th RRC was made available for review for this report. The photograph indicated a sump at the bottom of the pit, and RRC personnel indicated the sump was sealed.

6.5 Asbestos-containing Material

A 1994 survey evaluation of ACM (Covino, 1998) at this facility found ACM in both the main building and the OMS building. The survey found non-friable ACM in the exterior window caulking of the main building. Non-friable ACM also was found in the asbestos cement board above the ceiling-mounted heater in the OMS building. The same survey also found two types of friable ACM in the OMS building – rolled paper-type pipe insulation and associated mud fittings, and white vibrations dampener cloth. The consultant (Covino Environmental) recommended asbestos removal from the OMS building.

Based on the onsite reconnaissance, the paper-type pipe insulation and associated mud fitting and the asbestos cement board above the ceiling-mounted heater in the OMS building appears to have been removed since the time of the ACM survey. There is, however, no record to support the removal of ACM from any part of the facility.

6.6 PCB-containing Equipment

One pad-mounted transformer is located on the Property, just east of the exterior west wall of the main building. No label indicating polychlorinated biphenyl (PCB) content was seen on the transformer unit. Personnel with National Grid Electric Company state that the transformer is not suspected of containing PCBs because of its year of manufacture. During the August 2006 site reconnaissance, the unit appeared to be in good condition, and no evidence of leakage was observed.

During the August 2006 site visit, older-style fluorescent light fixtures were observed in the main and OMS buildings. Older fixtures, especially those that are original to the Property, could potentially contain PCBs.

6.7 Lead-based Paint

No record exists to indicate an LBP survey has been conducted for this Property. Because the buildings on the Property were constructed before 1981 (except the main building that was demolished and rebuilt in 1988), the drill hall and OMS building are presumed to contain LBP. At the time of the site reconnaissance, the painted surfaces at this facility were in good condition, except for the wood fascia above the vehicle bay doors of the OMS building. Photograph 1 in Appendix B illustrates the condition of the paint.

6.8 Radon

Based on a review of available records, no site-specific radon survey has been conducted for the USAR Center. An EDR search indicated no heightened level of concern for radon gas in the area the USAR Center is located. The USEPA Map of Radon Zones for Bristol County, Rhode Island, confirms that the county lies within the low-priority zone, Zone 3, which has a predicted average indoor screening level lower than USEPA's recommended maximum allowable exposure level of 4.0 picoCuries per liter (pCi/L). The EDR report provides radon test results for the 02809 zip code area. The results concluded that the basements in the area had an average radon activity level of 2.760 pCi/L, while first floor living areas had an average level of 1.600 pCi/L.

6.9 Munitions and Explosives of Concern

Based on a review of available records, the site reconnaissance, and interviews with USAR Center personnel, there is no indication that munitions and explosives of concern (MEC) are or were present at the Property. The small arms and ammunition were properly stored in arms vaults, and do not constitute MEC. There also was an indoor firing range on the Property, but it appears to have been thoroughly cleaned up (Photograph 7, Appendix B). The space is now used as clean office space, containing desks, files, and computers. The range cleanup record was not available for this ECP report.

6.10 Radioactive Materials

Radiological material may have been used and stored onsite because there is a caged storage space designated as a nuclear, biological, and/or chemical (NBC) room in the OMS building (Photograph 6, Appendix B). Site personnel, however, stated that no radioactive material is currently stored on the Property and could not confirm if radioactive material has historically been stored on the Property. The cage space is now used to store office supplies such as stationary, copier paper, printer ink, and toner. In addition, items such as sights, compasses, and watches, which may have had radiological components, may have been stored here in the past.

A radiological survey has been conducted for this Property, but contacts with the 94th RRC Safety Office indicated that this information was not reasonably available.

7 Review of Special Resources

7.1 Land Use

The City of Bristol's Community Development and Zoning Department has designated this Property and surrounding properties as R-1, Residential. The site is located in a mixed-used area that includes recreational and residential land uses.

7.2 Coastal Zone Management

The Rhode Island Coastal Resources Management Committee is the lead agency for the Rhode Island Coastal Management Program. This Property is not included in the coastal zone management plan, nor is it in a coastal zone.

7.3 Wetlands

According to the 1988 U.S. Fish and Wildlife Service (USFWS) National Wetlands Inventory maps and the Rhode Island State Wetlands, the Property is part of the PF01B Bristol jurisdictional wetlands area described as freshwater forested/shrub wetland. The Natural Resources Survey (ESNR, 1996) also identified approximately 0.09 acre Temporary (E,F) Palustrine type wetlands on the Property. Figure 11 in Appendix A is an enlarged section of the National Wetlands Inventory map showing the PF01B Bristol jurisdictional wetland and location of the Property.

7.4 100-year Floodplain

A review of the FEMA digital Flood Hazard Area map indicates that the Property lies outside the 100-year floodplain. Figure 4 in Appendix A provides a map of the 100-year floodplain elevations located in the immediate vicinity of the Property.

7.5 Natural Resources

The *Floor and Storm Drains Inventory and Natural Resources Inventory* (ENSR, 1996) noted that this USAR Center did not contain any key rare species or any endangered or threatened plants and animals.

7.6 Cultural Resources

The Rhode Island Historical Preservation and Heritage Commission Historic Property Data Collection Form (Appendix D) provides information about a cultural resources survey that Public Archaeology Laboratory, Inc. (PAL) performed for this site in March 1995. The purpose of the survey was to review historical information, setting and landscape, cultural resources, architectural information, and structure descriptions for this Property. Each

structure also was assessed for its eligibility to the National Register of Historic Places (NRHP). Overall, neither building at the Property was found to meet the criteria for inclusion in the NRHP. Both buildings were classified as being non-contributing elements within the Poppasquash Farms National Historic District.

Chapter 7 of the Rhode Island Project Facilities reviewed previous archaeological studies and verified their conclusions that much of the Property had been significantly disturbed, and therefore had low sensitivity for archaeological resources. The northeast corner and possibly the southern fence line of the Property, however, are believed to have a moderate to high sensitivity for intact cultural resources, and therefore an archaeological survey of these areas was recommended in the report.

8 Conclusions

The following information was obtained after conducting an environmental record search, including records for adjacent properties, reviewing available historical information, conducting interviews with knowledgeable parties connected with the Property or with state and local agencies, and conducting a reconnaissance of the Property and adjacent properties.

8.1 Review of Findings

Hazardous Substances. Hazardous substances pursuant to CERCLA 101(14) (42 United States Code 9601(14)) were used and stored at the Property in amounts necessary to support unit-level vehicle and building maintenance activities.

Available records indicate that batteries, old paint, pesticides, and corrosive materials (a chemical agent set) were historically stored at the Property. During the 2006 site reconnaissance, paint and common household janitorial supplies were observed stored in the storage cage in the OMS building.

Available documentation also states that a portion of the site is suspected to have been used as a landfill in the past. The potential for contamination due to the suspected landfill activities has not been investigated.

USTs/ASTs. Three heating oil USTs were located at this Property, and all three have been removed. An NFA report and a closure certificate dated May 16, 1988, are available for one tank. Closure certifications for the other two tanks (1,000- and 3,000-gallon) have not been located, even after contacting RIDEM.

Three 1,000-gallon propane ASTs were installed in 1992 to store propane gas that is used to heat the buildings on the Property. The tanks' exteriors were in good condition at the time of the August 2006 site reconnaissance visit.

Non-UST/AST Petroleum Storage. Available records (ECAS Report, June 1994) indicate that petroleum, oil, and lubricants (POL) have been stored in drums at this facility. An area of stressed vegetation on the north side of the OMS building was noted in the 1992 ECAS report. Facility personnel indicated that drums of waste automotive products were once stored there. While a site investigation was requested to assess the cause of the stressed vegetation, it is unknown whether an investigation was performed.

A 1994 drain inventory (ESNR, 1994) noted a work pit within the OMS (Photograph 5, Appendix B, which shows one corner of the former pit). The report also indicated that facility personnel stated that the work pit contained a floor drain at the bottom. ESNR personnel conducting the inventory could not visually confirm the presence of the floor drain. Outfall for this floor drain was not verified during the drain inventory. With the exception of the floor drain in the arms vault, which had been removed, and the unconfirmed work pit floor drain, all other floor drains were verified as still in use and

discharged to the leach field. If the vehicle maintenance shop floor drains were connected to the leach field, oil, grease, and cleaning solvents may have been directed from the floor drain in the vehicle maintenance shop to the septic system.

As part of the ECAS during a 1992 inspection by the 416th Engineer Command, Fort Devens Facility Engineering Team, a pungent diesel odor was detected in the drain/sump area of the wash rack. During the August 2006 site reconnaissance, there was a crack in the concrete extending across the wash rack, adjacent to the drain (Photograph 2, Appendix B). The photograph also shows the area around the drain has been repaired, and based on the elevated level of the current drain, repairs or modifications to the sump likely occurred. In addition, during the 1996 inspection, the outfall of the wash rack drain could not be verified, and there is no indication that the wash rack drained to an OWS.

During the 2006 site reconnaissance, however, no petroleum storage other than in USTs or ASTs was observed on the Property.

PCBs. One pad-mounted transformer unit, in good condition, is located on the Property. National Grid Electric Company personnel state that the transformer is not suspected of containing PCB because of its year of manufacture.

ACM. A 1994 survey evaluation of ACM at this facility (Covino, 1998) found friable and non-friable ACM in the OMS and main buildings. The consultant (Covino Environmental) recommended asbestos removal from the OMS building.

Based on the 2006 site reconnaissance, the paper-type pipe insulation and associated mud fitting and the asbestos cement board above the ceiling-mounted heater in the OMS building appear to have been removed since the time of the ACM survey.

LBP. No record exists to indicate an LBP survey has been conducted for this Property. Because the buildings on the Property were constructed before 1981 (except the main building that was demolished and rebuilt in 1988), the drill hall and OMS building are presumed to contain LBP. At the time of the site reconnaissance, the painted surfaces at this facility were in good condition, except for the wood fascia above the vehicle bay doors of the OMS building. Photograph 1 in Appendix B illustrates the condition of the paint.

Radiological Materials. It is not clear if radiological materials have been used and stored onsite. A storage cage in the OMS building is designated "NBC Room." Site personnel confirmed that radiological materials are not currently stored in the cage. The storage cage is currently used to store office supplies such as stationary, copier paper, printer ink, and toner. In addition, according to interviewees, items such as sights, compasses, and watches, which may have had radiological components, may have been stored here in the past. A radiological survey has been conducted for this Property, but contacts with the 94th RRC Safety Office indicated that this information was not reasonably available.

Radon. Radon surveys have not been performed for the Property; however, the USEPA Map of Radon Zones for Bristol County, Rhode Island, confirms that the county lies within the low-priority zone, Zone 3, which has a predicted average indoor screening level lower than USEPA's recommended maximum allowable exposure level of 4.0 pCi/L.

MEC. Available records do not indicate any MEC formerly located at this Property. In addition to a small arms vault, there was an indoor firing range located at the northwest

corner of the main building. The range has been decommissioned and cleaned and is now used as office space. No evidence of MEC was observed during the 2006 site reconnaissance.

Surrounding Properties. Potential environmental sites of concern, located within the 1-mile ASTM search radius from the Property, were evaluated. There has been a petroleum product release from Bristol Express (formerly Sunoco) located approximately 0.4 mile east of the Property. There is active remediation of this upgradient LUST site; therefore, there is the potential for the release to impact the Property. Reasonably available information, however, did not define the extent of the POL plume and thus does not provide sufficient evidence that it has affected the Property.

Wetlands and Floodplain. According to the 1988 USFWS National Wetlands Inventory maps and the Rhode Island State Wetlands, the Property is part of the PF01B Bristol jurisdictional wetlands area described as freshwater forested/shrub wetland. Figure 11 in Appendix A is an enlarged section of the National Wetlands Inventory map showing the PF01B Bristol jurisdictional wetland and location of the Property. The Property is not located within a 100-year floodplain or within a coastal zone.

Threatened and Endangered Species. The USAR Center does not contain any key rare species, or any endangered or threatened plants and animals.

Archaeological and Historical Resources. Neither building at the Property was found to meet the criteria for inclusion in the NRHP. Both buildings were classified as being non-contributing elements within the Poppasquash Farms National Historic District.

8.2 Environmental Condition of Property

Findings of this ECP report were based on reasonably available environmental information; interviews with site, state, and local personnel; review of previous environmental studies; and federal and state database and file information related to the storage, release, treatment, or disposal of hazardous substances or petroleum products. Results also were based on visual observations of the Property and adjacent properties.

In accordance with the DoD policy issued in October 1996 on the categorization of property to be transferred using BRAC procedures (see Sherri Goodman memorandum dated 21 October 1996) and using for additional guidance the ASTM Designation D5746-98 (2002), *Standard Classification of Environmental Condition of Property Area Types for Defense Base Closure and Realignment Facilities*, the Property has been classified as Type 7. The property type is based on the following major findings:

- Possible release causing documented stressed vegetation on the north side of the OMS building. Additional documentation or further evaluation is needed on the north side of the OMS building, where drums of waste automotive products were allegedly stored for up to 3 years before 1989, and where stressed vegetation has been documented.
- During a 1992 inspection as part of the ECAS, a pungent diesel odor was detected in the drain/sump area of the wash rack. During the 2006 site reconnaissance, there was a crack in the concrete extending across the wash rack, adjacent to the drain (Photograph 2, Appendix B). The photograph also shows the area around the drain has been repaired

and based on the elevated level of the current drain, repairs or modifications to the sump likely occurred. No documentation was reasonably available to confirm there has not been a release from the crack or repaired drain.

- Lack of verified closure documentation for USTs. During the 2000 removal of the two heating oil USTs, RIDEM required that a closure assessment be performed. RIDEM has no record of the assessment having been performed, and thus no closure certificate for these tanks has been located.
- Adjacent property may impact the USAR Center. Depending on the remediation status and investigative findings of the Bristol Express site investigation, more information is needed on this site's potential environmental impact on the Property.
- Additional evaluation may be needed regarding the alleged landfill that may have been on the Property. Available aerial photographs dating back to 1951 were reviewed. Conclusive evidence of whether or not a portion of the Property was part of a landfill was not ascertainable from the photographs.
- Property has its own verified septic tank and leach field.

TITLE RESEARCH NOTES

Notes:

ASTM Notes:

ASTM E 1527-05, Section 8.3 on Historical Use Information requires a review of
“Reasonably Ascertainable standard historical sources.”

“Reasonably Ascertainable means information that is publicly available, obtainable from a source with reasonable time and cost constraints, and practically reviewable.”

This task requires reviewing only as many of the standard historical sources as are necessary, and that are reasonably ascertainable and likely to be useful.

Banks Information Solutions, Inc. has determined that the ASTM E 1527-05, Section 8.3 requirements has been met for the subject property searched in this report. Land title records required to obtain additional information regarding the subject property were not “reasonably ascertainable” at the time of this report.

Environmental Liens: No environmental liens identified.

RESOURCES & LIMITATIONS

Banks Information Solutions, Inc. (Banks) has completed your request for an Environmental Chain of Title search for the above site. The information in this report has been produced from a limited search of the public land records and/or real property deed records of the county and state for a 50 year period up through the indicated date as shown on this report. This limited search includes only the recorded deeds and most easements and surface leases affecting the ownership history of the subject property. This report is being provided for use only as a limited part of an overall Phase I Environmental Site Assessment as performed by a qualified Environmental Engineer/Consultant as specified in the ASTM Standard E 1527-05 and as specified in the Comprehensive Environmental Response, Compensation and Liabilities Act of 1980, as amended, and may not be relied upon for any other purpose.

This report is not to be considered an Abstract, a Title Commitment, Title Opinion, Title Guaranty, or a representation of the legal status of the property. The information presented is simply a report of instruments filed of record pertaining to the above property and was obtained from the county public records. No guaranty as to the integrity or correctness of said records is implied.

HISTORICAL OWNERSHIP REPORT

GLOSSARY

There are certain terms used in Chain of Title searches, which may require clarification. This glossary is designed to provide definitions for some of the most common terms.

1. ENVIRONMENTAL LIEN:	The Environmental Lien is a record of a document/instrument filed by the City, County, State or Federal Government that prevents the conveyance of a property because of severe environmental problems existing on the premises.
2. BREAK IN CHAIN:	<p>There may appear to be a break in the chain of title as indicated when the sequential tracing of ownership fails. An example of a break would be: <i>Smith to Jones. . . Jones to Wilson. . . White to Black</i>. The missing link is from Wilson to White. There are several possible reasons for this occurrence.</p> <ul style="list-style-type: none"> • Due to the size or other physical characteristics of the property, there could be multiple owners at any time when tracing the history of the ownership of the property. • There could be an “easement title” over some portion of the property, allowing for use of that portion for a specific purpose. • There could be a “multi-percentage interest” in the property, with concurrent multiple owners making up 100% of the fee title. Then, a percentage owner deeds out his particular interest or a percentage of this interest to one or more parties. This causes a perceived break in the chain.
3. EASEMENT:	An easement is the right to enter and use another person’s property: a non-possessor right to use another person’s real property. Traditionally easements are granted to utility companies and other service organizations or as a right of access to another property.
4. MULTIPLE OWNERS:	<p>When “others” or “et al” appears on the report in the owner category, it indicates multiple ownership of a single parcel, with too many names to record in summary. It is frequently used to denote more than a single owner. If the owners are a married couple, both names may appear on the report or may be denoted by “et ux”.</p> <p>The term “owners’ is usually used to indicate owners of multiple parcels, all recorded under a document that covers the multiple parcels.</p>
5. MULTIPLE PARCELS:	Some properties are created by combining several adjoining parcels into one large parcel. When this occurs; there might be several different owners until the time of unification of the property. Sometimes the ownership appears to be cloudy until each owner conveys his/her interest to the single owner of the new larger parcel.

DISCLAIMER

The information contained in this report has been obtained from publicly available sources and other secondary sources of information produced by entities other than Banks Information Solutions, Inc (Banks). Appendix G. U.S. Army Corps of Engineers, Asbestos Abatement Survey, September 1990	

EXECUTIVE SUMMARY

The U.S. Army Corps of Engineers retained ABB Environmental Services, Inc. (ABB-ES) of Wakefield, Massachusetts to perform asbestos surveys of 41 Army Reserve Centers (ARCs) throughout New England during September, October, November, and December 1994. ABB-ES subcontracted with Covino Environmental Consultants, Inc. (CEC) to accomplish this task.

The objective of this task is twofold. First, the site-specific surveys will provide the Army with information concerning the extent of asbestos-containing building materials (ACBM) at each facility, a hazard assessment, and an operations and maintenance (O&M) plan to properly address potential concerns. Second, the summary reports prepared for each facility will provide the information necessary to plan future remediation efforts at the facilities on a worst-first basis.

The facility surveyed for this report was Quinta Gamelin ARC, Asylum Road, Bristol, Rhode Island. The facility consists of a Main Building and a Maintenance Building (OMS).

The Main Building at the site is used primarily for offices, classrooms, and a drill hall. The heating, ventilation, and air conditioning (HVAC) system includes a combination of radiators and air handlers supplied by oil-fired boiler. The Main Building, which was originally constructed 1957, was demolished and rebuilt in 1988, and contains 14,755 square feet of space.

The OMS is used for maintenance, and was constructed in 1957. The OMS contains 2,688 square feet of space. The only HVAC in the building are gas-fired, ceiling-mounted blower units.

Michael Hickey and Glenn Nelson of CEC conducted the survey on October 12, 1994 and returned to collect additional samples on December 13, 1994. The CEC inspectors performed visual inspections of all accessible interior areas, exterior areas, and rooftop areas. Observations were made for thermal system insulations, surfacing materials, and miscellaneous materials within mechanical spaces, office areas, classrooms, and maintenance areas. Whenever feasible, the spaces above suspended ceilings, within wall chases, high bay areas, etc., were also inspected. Because inspection was limited in such areas, assumptions about these areas were sometimes based on information contained in as-built drawings. No destructive sampling was conducted as part of this survey.

Representative bulk samples of each type of suspect ACBM observed were collected for laboratory analysis. To determine asbestos content, the samples were analyzed using Polarized Light Microscopy with Dispersion Staining (PLM/DS) in accordance with EPA protocol. Suspect materials were classified as ACBM if the analytical results indicated an asbestos content of greater than one percent.

EXECUTIVE SUMMARY (cont.)

Both friable ACM (materials that, when dry, may be reduced to powder by hand pressure) and nonfriable ACBM were identified at the site. Friable ACBM identified was white vibration dampener cloth, and rolled paper-type pipe insulation and associated mud fittings in the OMS Building. Nonfriable ACBM included exterior window caulking in the Main Building and asbestos-cement (transite) board above ceiling-mounted heaters in the OMS Building.

CEC's assessment of the Quinta Gamelin site indicated that the condition of ACBM located in the OMS building presents a potential hazard. Friable thermal system paper-type pipe insulation in the OMS building is in relatively poor condition, and is potentially susceptible to disturbance and fiber release. Based on the results of the assessment, remedial action is recommended at this time. To minimize potential hazards, an O&M plan (Appendix F) should be implemented to maintain ACBM remaining in place.

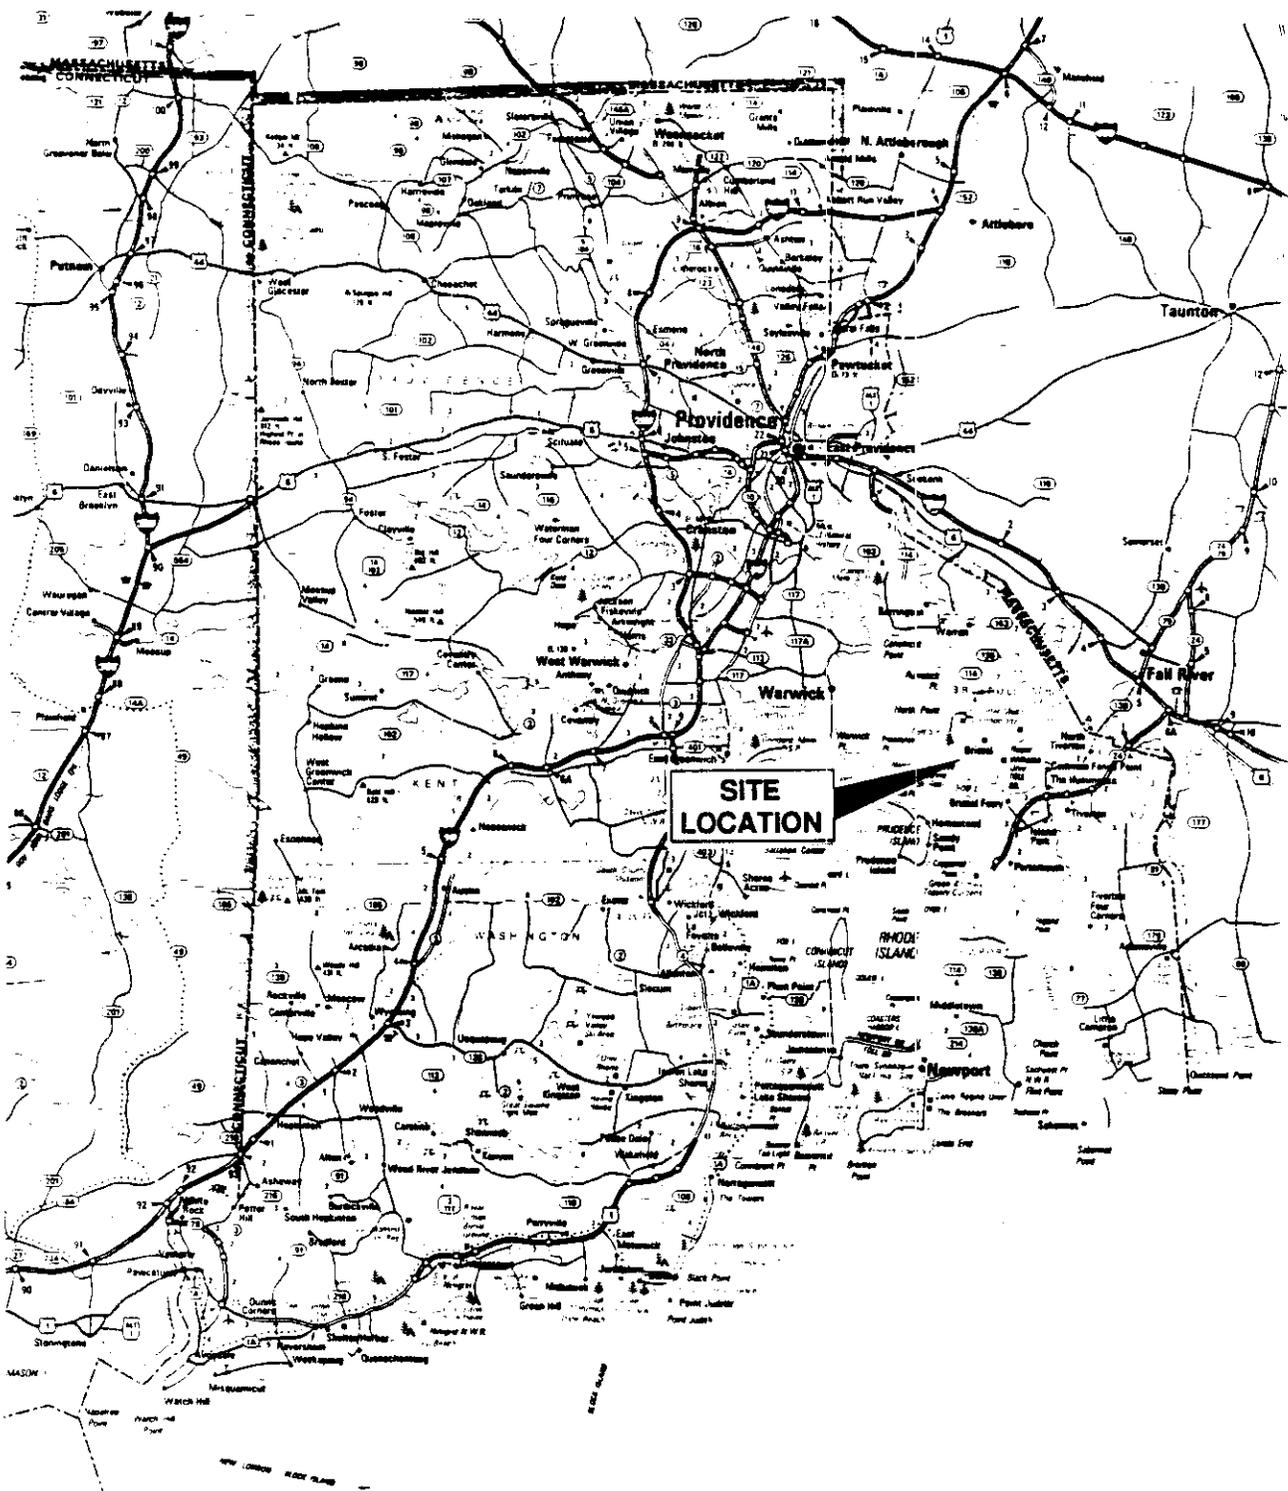

In addition, CEC returned to the site to perform a quality control visual inspection on July 10, 1996. A sample of suspect exterior window caulking was collected and analyzed using the PLM method. PLM analytical results indicated that the caulking contained 3% Chrysotile asbestos.

For informational purposes only, cost estimates have been provided for removing and replacing ACBM (Table 3). The total estimated cost for removing and replacing friable ACBM is \$2,690. The total estimated cost for removing and replacing nonfriable ACBM is \$585.

LIMITATIONS

Due to several limitations further survey work will be required if future renovation or maintenance activities occur which result in demolition of any part of the existing building structure. These limitations include:

- A. Since no core samples of roofing material were collected, only exposed surfaces of the roof were inspected;
- B. Potentially hidden areas, such as wall cavities, the space between fixed ceilings and the ceiling deck, internal equipment and parts, etc. may contain ACBM that was not accessible during the survey; and,
- C. The inner cavity of fire doors, which sometimes contains ACBM insulation, were not inspected.

GLOSSARY

1. Asbestos - Includes chrysotile, amosite, crocidolite, tremolite asbestos, anthophyllite asbestos, actinolite asbestos, and any of these materials that have been chemically treated and/or altered.
2. Asbestos-Containing Material (ACM) - material composed of asbestos of any type and in any amount greater than 1% by area, either alone or mixed with other fibrous or nonfibrous materials.
3. Asbestos-Containing Building Material (ACBM) - Surfacing ACM, thermal system insulation ACM or miscellaneous ACM that is observed in or on interior structural members or other parts of a building.
4. Asbestos-Contaminated Area - Any surface/area where visibly damaged friable asbestos material is present.
5. Bulk Sample - A small portion of suspect ACM collected and placed into an airtight container for microscopic analysis.
6. Cellulose - Vegetative, plant fibers; paper, cotton, etc.
7. Fibrous Glass - Man made; spun or extruded from a resin.
8. Friable Asbestos Material - Any ACM that can be crumbled, pulverized or reduced to powder when dry, by hand pressure, and which releases asbestos particles to the environment.
9. Homogenous Area - A material that is uniform in texture and appearance, was installed at one time, and is unlikely to consist of more than one type or formulation of material.
10. Miscellaneous ACM - Any ACM which is not categorized as thermal system insulation or surfacing insulation.
11. Nonfriable Asbestos Material - Any ACM that cannot be crumbled, pulverized or reduced to powder when dry, by hand pressure.
12. Point Counting - A microscopic method of bulk sample analysis using a systematic, statistical approach to determine the percentage concentration of asbestos in a friable suspect ACM.
13. Polarized Light Microscopy - An optical microscopic technique used to distinguish between different types of asbestos fibers by their shape and unique optical properties.

GLOSSARY (cont.)

14. Resinously Bound Material - A material which is held together in a resinous matrix (eg., mastic adhesive, roof flashing, etc.).
15. Surfacing ACM - An ACM which is spray or trowel-applied to a surface for acoustical, decorative or fireproofing purposes
16. Transmission Electron Microscopy (TEM) - A method of microscopic analysis which utilizes an electron beam that is focused onto a thin sample. As the beam penetrates (transmits) through the sample, the difference in densities produces an image on a fluorescent screen from which asbestos structures can be identified and quantified.
17. Thermal System Insulation ACM (TSI) - Any ACM which is applied to heating or mechanical equipment for the purpose of retaining heat or condensation.
18. Transite - An asbestos-cement board product. Typically applied in cooling towers, above heating elements, beneath wood floors, as wall board, etc.

INTRODUCTION

The U.S. Army Corps of Engineers retained ABB Environmental Services, Inc. (ABB-ES) of Wakefield, Massachusetts to perform asbestos surveys of 41 Army Reserve Centers (ARCs) throughout New England during September, October, November, and December 1994. ABB-ES subcontracted with Covino Environmental Consultants, Inc. (CEC) to accomplish this task.

The purpose of these surveys is to identify, quantify, and assess materials at each site that are suspected of containing asbestos fibers and, when asbestos-containing building materials (ACBM) are identified, to prioritize their need for removal.

On October 12, 1994, two inspectors representing CEC performed an asbestos survey of the Quinta Gamelin ARC located at Asylum Road, Bristol, Rhode Island.

Michael Hickey (Rhode Island Health and Safety Department Certification #AAC-275IS) performed the survey assisted by Glenn Nelson (AAC-468IS). This certification of these CEC representatives as Asbestos Inspectors is required and regulated in accordance with Chapter 24.5 of Title 23 General Laws entitled Health and Safety. In addition, each inspector is appropriately accredited to perform building inspections through having successfully completed an EPA-approved asbestos inspection training course.

On the day of the inspection, the survey team met with the facility manager, George Douglas, who provided information regarding the site as well as access to the buildings.

This report contains a description of the site (section 1), a discussion of the sampling methods (section 2), a description of the laboratory analytical methods and results (section 3) and conclusions and recommendation (section 4).

The results of the survey are summarized in tabular form (section 3). Table 1, the Inventory of Suspect ACBM, provides a list of all suspect ACBM encountered by the CEC inspectors during the survey, the locations in which the materials were observed, their sample number(s), the materials' friability, and the analytical results for each type of suspect material. A suspect material was classified as ACBM if PLM/DS analysis of one or more samples indicated the presence of asbestos in quantities greater than one percent.

Table 2, the Inventory of ACBM, presents the list of positively identified ACBM, including material location, condition, and accessibility. The assessment rating for exposure for each type of ACBM is based on the United States Army Environmental Center (USAEC) prioritization criteria.

INTRODUCTION (cont.)

CEC's conclusions and recommendations are stated in section 4. Table 3 presents CEC's cost estimates for totally removing and replacing ACM identified during the survey.

Appendices A through G present bulk sample analytical results, drawings depicting locations of samples and of ACM, photographic documentation, asbestos prioritizations forms, personnel and laboratory certifications, the operations and maintenance plan, and the U.S. Army Corps of Engineers Asbestos Abatement Survey.

1. SITE DESCRIPTION

The Quinta Gamelin Army Reserve Center in Bristol, Rhode Island consists of a Main Building and a Maintenance Building (OMS). According to the facility manager, the Main Building was originally constructed in 1957, and demolished and rebuilt in 1988. The OMS building is of the original 1957 construction.

The Main Building has two floors. The first floor is used primarily for offices, (excluding drill hall) storage rooms, and classrooms, and it also contains an assembly hall. The building is a masonry block structure of 14,755 square feet, with a brick exterior. The building is constructed on a concrete slab. Building finishes include masonry block walls, sheetrock ceilings and suspended ceiling tiles. Floor finishes are vinyl and ceramic tile.

Heating is supplied in the Main Building by oil-fired boilers distributing forced hot air through a duct system. Air conditioning is supplied by a new "Carrier" system. No suspect ACBM associated with the heating or air conditioning system was noted. The only ACBM identified in the Main Building was nonfriable exterior window caulking.

The OMS is a one-story structure used for maintenance work. The building is a wood-frame structure of 2,688 square feet, with concrete block walls and concrete floors. The building is heated by two ceiling mounted blower units.

Both friable and nonfriable ACBM were identified in the OMS building. Friable thermal system pipe insulation and associated mud fittings were located on the plumbing lines, nonfriable transite board on the ceiling above the heater units, and friable white vibration dampener cloth on the ceiling-mounted heater units.

2. SAMPLING METHODS

The purpose of the survey was to identify both friable and nonfriable ACBM at the site.

In the course of collecting random bulk samples for laboratory analysis, every effort was made to identify all locations and types of suspect ACBM. All building materials other than wood, plastic, metal, rubber, glass, and most masonry products were considered to be suspect ACBM. Sampling often included multiple samples of the same type of material because inconsistencies in manufacturing processes and installation practices may have resulted in materials of similar construction having varied asbestos content.

Both the interior and exterior of each building were inspected. The survey included observations for the following types of suspect ACBM:

- thermal system insulation on pipes, tanks, boilers, and similar items;
- surfacing materials such as acoustical and decorative plasters, fireproofing on beams, columns, and ceiling decks, and other coatings applied by spray or trowel;
- miscellaneous friable materials such as ceiling tiles, gypsum wallboards, joint compounds, cloth gaskets, blown-in insulations, etc.; and
- miscellaneous nonfriable materials such as floor tiles, adhesives, cementitious wallboards, asphaltic roofing materials, etc.

To prevent the potential for future water leaks, bulk samples of asphaltic roofing materials were collected in such a manner that the integrity of the roofing system was not compromised. This was conducted by only collecting samples of flashings, shingles or the surface layer. Core sampling through the entire thickness of roofing systems was not performed. Asphaltic roofing materials that were not sampled should be assumed to contain asbestos, unless bulk sampling and analysis indicate otherwise.

Some friable building materials, such as fireproofing and most thermal insulations installed in 1980 or later, were also not considered to be suspect ACBM. Stored materials (gaskets, brake pads, gloves, etc.) that may contain asbestos but are not building materials were not included in the survey.

Since asbestos content of building materials was to be determined by the laboratory analysis of random bulk samples (RBS), CEC used a sampling protocol based on the following requirements of the Asbestos Hazard Emergency Response Act (AHERA):

2. SAMPLING METHODS (cont.)

Bulk sampling of suspect building materials was performed by collecting a small but representative portion of material into plastic vials with tightly fitting caps that were sealed immediately after sample collection. Insulation and other friable samples were collected using a knife with a lockable blade or a single-use hollow metal coring device. After sample collection, sampling devices were immediately cleaned to prevent cross-contamination of samples. Each sample was assigned a unique number that was recorded on the sample container. The sample number and location were also recorded on field data sheets. The locations from which bulk samples were collected were sealed with duct tape, caulking compound, or other suitable materials. Sample locations were labeled with the date and unique sample number using indelible markers. Sample locations were labeled with the date and unique sample number using indelible markers. Samples were then transported and submitted to the CEC laboratory in Woburn, Massachusetts for microscopic analysis.

3. LABORATORY ANALYTIC METHODS AND RESULTS

Laboratory analyses were conducted on October 18, 1994 and December 14, 1994.

In order to identify asbestos content, samples were analyzed using Polarized Light Microscopy with Dispersion Staining (PLM/DS) in accordance with the United States Environmental Protection Agency's (EPA) Interim Method for the Determination of Asbestos in Bulk Insulation Samples (EPA 600/M4-82-020). A building material was classified as an ACBM if one or more samples indicated a result of greater than one percent (> 1%) asbestos.

In instances where multiple bulk samples were collected from the same homogenous area, if the analytical result of the initial sample indicated the presence of asbestos at a concentration greater than one percent, subsequent bulk samples were not analyzed.

The EPA method is considered sensitive to the presence of asbestos at less than one percent of the overall sample composition for materials (a) that do not contain resinous matrices, and (b) that have asbestos fibers greater than one micrometer in diameter (> 1 μm).

For resinously bound materials, or for materials that may have very thin asbestos fibers (< 1 μm), PLM/DS analysis may yield false negative results due to difficulties in separating suspect fibers from the resins that bind them. False negative results may also occur when the analyst is unable to detect very fine fibers due to the limits of resolution of the microscope used for PLM/DS analysis. Samples of floor tiles and floor tile adhesives are particularly difficult to analyze using PLM/DS. These materials contain resinous matrices, and they also typically contain very thin fibers due to grinding and other shearing processes conducted during manufacture. To positively identify the asbestos content of these types of materials, Transmission Electron Microscopy (TEM) is the preferred method. TEM provides greater resolution along with an elemental analysis of suspect fibers to identify asbestos.

Because of the aforementioned limitations of PLM/DS, samples of floor tiles and floor tile mastics were analyzed by TEM if the initial analytical results indicated an asbestos content of one percent or less. Briggs Associates, Inc. of Atlanta, Georgia conducted the TEM analysis using a semi-quantitative analysis. Results are reported as no asbestos detected, or as a light, moderate or heavy concentration of asbestos. If any asbestos is detected using this method, the material in all probability contains greater than one percent asbestos and is therefore, classified as an ACBM.

4. CONCLUSIONS AND RECOMMENDATIONS

On the basis of CEC's inspection of the Main Building and the Maintenance Building of the Quinta Gamelin Army Reserve Center in Bristol, Rhode Island, and of CEC's collection of random bulk samples of friable and nonfriable suspect asbestos-containing building materials and their analyses by CEC's laboratory, CEC concludes that:

- (1) The exterior window caulking associated with the Main Building is in fair condition, and should not be disturbed in any manner that may cause a fiber release.
- (2) The thermal system pipe insulation and associated mud fittings in the OMS building is damaged and should be removed.
- (3) The transite boards in the OMS building, above the ceiling-mounted blower units is in good condition and not very accessible. However, this material should not be cut, ground, sawed or otherwise disturbed in such a manner that may cause fiber release.
- (4) The vibration dampener cloth in the OMS Building is in good condition and shall not be disturbed in any manner that may cause fiber release.

Therefore, CEC recommends that the exterior window caulking be maintained in fair condition, the thermal system pipe insulation and associated mud fittings should be removed, and the transite board may remain in place and be monitored under the O&M Program.

At the client's request, we have prepared cost estimates (Table 3) for the total removal and replacement of ACBM identified during the survey. These estimates are for informational purposes only and are not intended to be compared to actual prices an abatement contractor might estimate for a specific project.

The estimated cost to remove all the ACBM is approximately \$2,255. The estimated cost to replace the friable ACBM with materials that do not contain asbestos is \$1,020. The estimated cost for total removal and replacement of ACBM is \$3,275.

Unit prices have been estimated based on typical 1994 costs for specific types of ACBM. These prices account for the labor, material, engineering controls, and expected transportation and disposal costs that would be incurred to remove and dispose of the ACBM.

LABORATORY CERTIFICATION # MA #AA000006

LABORATORY SUPERVISOR

THESE SAMPLES WERE ANALYZED BY POLARIZED LIGHT MICROSCOPY WITH DISPERSION STAINING (PLM/DS) ACCORDING TO THE UNITED STATES ENVIRONMENTAL PROTECTION AGENCY (US EPA) "INTERIM METHOD FOR THE DETERMINATION OF ASBESTOS IN BULK INSULATION SAMPLES" (EPA-600/M4-82-020). THIS METHOD IS GENERALLY CONSIDERED SENSITIVE TO THE PRESENCE OF ASBESTOS AT LESS THAN ONE PERCENT. THIS REPORT RELATES ONLY TO THOSE SAMPLES ANALYZED, AND MAY NOT BE INDICATIVE OF OTHER SIMILAR APPEARING MATERIALS EXISTING AT THIS, OR OTHER SITES.

FLOOR TILES AND RESINOUSLY BOUND MATERIALS ANALYZED BY EPA METHOD 600/M4-82-020, INTERIM METHOD FOR THE DETERMINATION OF ASBESTOS IN BULK INSULATION SAMPLES, MAY YIELD FALSE NEGATIVE RESULTS DUE TO DIFFICULTIES IN ISOLATING SUSPECT FIBERS AND SUBSEQUENTLY IDENTIFYING THEM BENEATH THE MATRIX MATERIAL WHICH ENCAPSULATES THEM. STAINING DURING THE MANUFACTURE OF VINYL TILE DECREASES THE FIBER SIZE OF THE ASBESTOS COMPONENT; THEREFORE, THE FIBERS MAY NOT BE READILY DETECTABLE USING POLARIZED LIGHT MICROSCOPY. AS A RESULT, LABORATORY ANALYSIS CANNOT ALWAYS BE ACCOMPLISHED USING STANDARD TECHNIQUES. WHEN THE EPA METHOD YIELDS A "NO ASBESTOS DETECTED" RESULT FOR FLOOR TILES AND RESINOUSLY BOUND MATERIALS, TUNDRA AIR CONSULTANTS RECOMMENDS FURTHER ANALYSIS USING SEM OR TEM TECHNIQUES FOR THE IDENTIFICATION OF ASBESTOS.

THE AMOUNT OF ASBESTOS PRESENT AT OR BELOW THE QUANTITATION LIMIT IS DETERMINED USING POINT COUNTS OF KNOWN WEIGHT PERCENTS AS CALIBRATION STANDARDS.

THE EPA METHOD REQUIRES THAT FRIABLE SAMPLES WITH ASBESTOS CONTENTS OF LESS THAN 10%, DETERMINED BY VISUAL ESTIMATION, BE VERIFIED USING THE POINT COUNTING TECHNIQUE OR OTHER METHOD. MATERIALS BELIEVED TO CONTAIN GREATER THAN 1% ASBESTOS BY THE BUILDING OWNER OR OPERATOR AND ANALYTICAL RESULTS INDICATE THE PRESENCE OF 1% OR LESS ASBESTOS IN A FRIABLE SAMPLE, THAT MATERIAL MUST BE TREATED AS ASBESTOS-CONTAINING MATERIAL UNLESS THE PRESENT QUANTITIES ARE VERIFIED USING THE POINT COUNTING TECHNIQUE. POINT COUNTING IS A SYSTEMATIC TECHNIQUE FOR ESTIMATING CONCENTRATION, ALSO USING PLM. IF YOU WISH TO VERIFY ANY OF YOUR FRIABLE SAMPLES WITH ASBESTOS CONTENTS OF LESS THAN 10% TO POINT COUNTING, PLEASE CALL OUR OFFICE. POINT COUNTING IS NOT REQUIRED FOR THOSE SAMPLES IN WHICH NO ASBESTOS IS DETECTED DURING ANALYSIS BY PLM.

ALL SAMPLES ARE STORED AT THE TUNDRA LABORATORY FOR A PERIOD OF THREE MONTHS. FURTHER INFORMATION OR RETURN OF SAMPLES MUST BE REQUESTED WITHIN THIS THREE MONTH PERIOD TO ENSURE THEIR AVAILABILITY.

INSTRUCTIONS FOR COMPLETING USAEL ACBM ASSESSMENT CHECKLIST

1. Complete a separate form for each suspect asbestos-containing building material (SACBM) in a building. If a building has no SACBM, insert "No SACBM Found" in the space labeled "SACBM I.D. No."
2. Complete all remaining items at the top of the form. If a SACBM exists essentially throughout a building, insert "Throughout Building" under "Room(s) or Area(s) Where Found." Otherwise, clearly list the rooms or areas where it was found (e.g., Entire Basement, Rooms 101-120, Attic Only, etc.)
3. To complete Parts I and II, circle the ratings which are appropriate for the particular SACBM. Use the largest circled ratings to calculate the Damage(D) Total and Exposure(E) Total when multiple ratings are circled. These totals represent the sum of the factor ratings for Parts I and II.
4. Note any other relevant observations in the space labeled at the bottom of the form, then determine the "Assessment Index" from the chart shown below.
5. The following provides further descriptions of the different possible scores for certain items. Refer to USAEC Figures 1a and 1b for further information about these items.

PART I: Damage Assessment Factors

- A. Physical Damage: Use "0" for non-ACBM, nonfriable ACBM, or ACBM with <1%. Use "1" for less than 10% damage, or controlled space accessed by maintenance personnel only, or uncontrolled/unoccupied space. "2" = 10-50% damage. "3" = >50-75% damage. "5" = >75% damage.
- B. Water Damage: Minor means <10%; major means >10%.
- C. Potential Damage due to Routine Maintenance Activities: For sprayed or trowelled-on materials, this means whether the friable ACBM could be damaged by routine maintenance activities occurring at the indicated distances from the ACBM. Assign "3" also when access is required above a lay-in ceiling where surfacing ACBM is located.
- D. Type of ACBM: Choose from list over.
- E. Percent asbestos.
- F. Damage(D) Total: Must be 0 if asbestos content is <1% or the material is nonfriable ACBM in good/fair condition; maximum score is 17.

PART II: Exposure Assessment Factors

- A. Material Friability: Defined by USEPA as crumbled, pulverized, or reduced to powder when dry under hand pressure.
- B. Occupant Accessibility to ACBM Fibers: Low: Isolated by barriers seldom breached; Moderate: barrier breached by routine maintenance activity; High: routinely accessible to other occupants.
- C. Activity/Use: Low = Infrequent maintenance activities only; Moderate = Frequent maintenance activities only; High = Normal occupant activities.
- D. Air Stream/Plenum: None means no perceptible air flow in the room or area; use 1 if an air flow is perceived but ACBM is not likely affected; use 2 if ACBM is exposed to perceptible or occasional air streams; use 3 if ACBM present in supply ducts/plenums or recirculated air, subjected to routine turbulence, or abrupt air movement.
- E. Area of visible surface or damaged ACBM.
- F. Population: Use the following formula to calculate for occupied building rooms/areas:

$$\text{Average Occupancy} = \frac{\text{Outside Visitors} \times \text{Ave. Hours Spent} + \text{No. Full-time 8-Hr. Building Occupants}}{8 \text{ Hrs.}}$$

Unoccupied facilities capable of being used are given a worst-case scenario value of "5," plus additional value per the table over. Other unoccupied facilities (bunkers, sheds) will receive "Zero" population value.

- G. Exposure(E) Total: Sum maximum scores for about Part II items; maximum score is 26.
- H. Assessment Index: Enter the letter code determined from the following matrix:

Damage(D) Score	Exposure(E) Score				
	26-24	23-15	14-8	7-4	Zero
17-13	A	A	B	C	F

3. Employee Training and Contractor Training and Notification.....	3
4. Operations and Maintenance Activities.....	6
5. Periodic Reinspection.....	10
6. Recordkeeping.....	12

1. INTRODUCTION

The purpose of the Operations and Maintenance (O & M) Program is to minimize the exposure of all building occupants and visitors to airborne asbestos fibers. To accomplish this goal, the O & M Program contains information for cleaning already released asbestos fibers from surfaces, preventing future release by minimizing disturbance of the damage to asbestos-containing building materials (ACBM), and monitoring ACBM conditions throughout the building. Important O & M Program elements include alerting building occupants about the locations of ACBM, training maintenance staff in special procedures for cleaning and handling ACBM, establishing a process that assures that ACBM are not disturbed during facility repairs and renovations, and periodically reinspecting areas containing ACBM. The O & M Program also establishes a recordkeeping system that documents employee training, O & M activities, abatement of ACBM, and the results of periodic reinspections. All records generated as a result of implementing this O & M Program, as well as this document, shall be kept by a designated Asbestos Program Manger.

This O & M Plan, to a large extent is modeled upon the requirements of 40 CFR Part 763, the Asbestos Hazard Emergency Response Act (AHERA). Although the requirements for implementing an O & M Plan is only required for schools under the AHERA regulation, the EPA recommends in their Green Book inclusion of the O & M requirements in any building that has ACBM. Also, OSHA's recently reissued asbestos standard (29 CFR 1926.1101) has several O & M related provisions, including housekeeping and labeling requirements.

LIMITATIONS

Due to several limitations further survey work will be required if future renovation or maintenance activities occur which result in demolition of any part of the existing building structure. These limitations include:

- A. Since no core samples of roofing material were collected, only exposed surfaces of the roof were inspected;
- B. Potentially hidden areas, such as wall cavities, the space between fixed ceilings and the ceiling deck, internal equipment and parts, etc. may contain ACBM that was not accessible during the survey; and,
- C. The inner cavity of fire doors, which sometimes contains ACBM insulation, were not inspected.

2. NOTIFICATION

The Asbestos Program Manager shall establish a procedure for labeling ACBM identified in the building survey. Accessible materials in service areas identified as ACBM shall be marked with the following label:

**DANGER
CONTAINS ASBESTOS FIBERS
AVOID CREATING DUST
CANCER AND LUNG DISEASE HAZARD**

Labels shall be prominently displayed in readily visible locations in the service areas and shall remain posted until the labeled ACBM are removed.

Additionally, maintenance staff who may work closely with or otherwise encounter ACBM throughout the facility shall be notified of the locations of all ACBM. These employees shall be made aware of the results of the building survey so that they may be familiar with the types and locations of identified ACBM. These employees shall also be instructed to immediately report to the Asbestos Program Manager any evidence of disturbance or damage of ACBM, or any dust or debris that apparently originates from ACBM. All employees who may encounter ACBM as part of their work must have access to a list of "Emergency Contact Phone Numbers" (Fig. 2-1).

3. EMPLOYEE TRAINING

A. Training of Workers in the Trades (16 hours)

All staff members who work in the skilled trades (carpenters, electricians, plumbers, etc.) and who conduct activities that will result in the disturbance of ACBM shall receive training. Activities that have a high likelihood of disturbing ACBM include routine cleaning in areas where friable ACBM are located; small-scale projects of short duration (i.e., repair or removal of less than three (3) linear or square feet of ACBM); and plumbing, heating and air conditioning, electrical, and other maintenance activities in locations adjacent to ACBM. Training shall be provided before workers are assigned to activities that may disturb ACBM. The training course shall be a minimum of sixteen (16) hours in duration. The content of the training course shall include, but not be limited to, the following elements:

1. Information regarding types of ACBM and its various uses and forms.
2. Information on the health effects associated with asbestos exposure.
3. Descriptions of the proper methods of handling ACBM and activities that could result in exposure of the employee to asbestos.
4. Information on the use of High Efficiency Particulate Air (HEPA) filter-equipped dual-cartridge respirators and other personal protection during maintenance activities.
5. Hands-on training in the use of respiratory protection, other personal protective measures, good work practices, and engineering controls.
6. Information on the asbestos program requirements for medical surveillance.
7. Recognition of damage, deterioration, and delamination of asbestos materials.
8. Relevant federal, state, and local requirements.

B. Awareness Training for Custodial Workers (2 hours)

All employees who perform custodial or maintenance tasks that may involve the accidental disturbance of ACBM, and all persons who perform work in the immediate vicinity of ACBM, shall receive awareness training. This awareness training course shall be a minimum of two (2) hours in duration. The content of the awareness training course shall include, but not be limited to, the following elements:

1. Background information on asbestos, including its uses and forms.
2. Health effects of exposure to asbestos.
3. Worker protection programs, including the use of respirators and other personal protective equipment.
4. How to recognize ACBM and how to avoid disturbing it.
5. Recognition of ACBM damage and deterioration.
6. Proper response to fiber-release episodes.

3. EMPLOYEE TRAINING (cont.)

C. Training Concerning Prohibited Activities

All facility employees shall be made familiar with the locations of all ACBM identified at the facility. Certain routine maintenance activities shall be prohibited when ACBM are involved. Specifically, they shall also be instructed that:

1. No holes shall be drilled in ACBM.
2. No plants or pictures shall be hung on structures covered with ACBM.
3. No ACBM floor tile shall be sanded or buffed using high-speed (≥ 300 rpm) equipment in accordance with 29 CFR 1926.1101 (L) (3)(ii).
4. While moving furniture or other objects, employees shall not damage ACBM.
5. No curtains, drapes, or other dividers shall be installed in such a way that they damage ACBM.
6. Floors, ceilings, moldings or other surfaces in asbestos-contaminated environments shall not be dusted with a dry brush or swept with a dry broom.
7. No ordinary vacuuming equipment shall be used to clean up asbestos-containing debris.
8. Ceiling tiles below ACBM shall not be removed unless the employee wears the proper respirator protection, clears the area of other people, and observes proper disposal procedures for removing asbestos waste.
9. No ventilation system filters shall be removed unless the filters are wetted.
10. No ventilation system filters shall be shaken out.

D. Refresher Training

A refresher training course shall be required every two years for all employees who are involved in Operations and Maintenance activities and who have completed the 16-hour training. The refresher training course shall be a minimum of one day (8 hours) in duration and shall include:

1. Review and discussion of changes in and interpretation of applicable state and federal laws, regulations, policies, and guidelines.
2. A discussion of developments or changes in state-of-the-art procedures and equipment.
3. Review of key areas of initial training specific to Operations and Maintenance workers.

3. EMPLOYEE TRAINING (cont.)

E. Verifying Competence of Outside Contractors

The Asbestos Program Manager shall be required to verify that all outside contractors performing work in the facility that may involve disturbance or damage of ACBM have received the training appropriate to the work they are to perform (as outlined in Parts 3(A), (B), (C), and (D) above). The Asbestos Program Manager shall also require all outside contractors to sign a certificate of acknowledgment (fig. 3-1) that they have been informed about the location of all ACBM in the facility. All outside contractors must have access to the list of "Emergency Contact Phone Numbers" shown in Figure 2-1.

Figure 3 - 1

CONTRACTOR'S ASBESTOS NOTIFICATION AND ACKNOWLEDGMENT FORM

for _____ (Project)

On behalf of _____, the undersigned hereby acknowledges the presence and location of asbestos-containing material (ACM) within the buildings located at the Quinta Gamelin Army Reserve Center located in Bristol, Rhode Island as further described herein. The undersigned agrees to avoid any contact with, or disturbance, of ACBM and to inform, and require, the same of all employees of the above-named company accordingly before they start any work at the building.

Based on sample testing conducted by the Army Corps of Engineers, ACBM have been identified in the building as described below:

A. **OMS**

1. Asbestos-cement (transite) board above ceiling blower units.
2. Thermal system pipe insulation and associated mudded fittings.
3. Vibration dampener cloth on ceiling-mounted heaters.

B. **Main Building**

1. Exterior window caulking

Any activities that could potentially disturb these materials, including but not necessarily limited to sanding, scraping, coring, drilling, hammering, removal, or anchoring are prohibited.

If you encounter any material that you suspect is ACM, or if you disturb any ACM in the course of your work, you agree to immediately stop all work and contact the project superintendent and the Asbestos Program Manager.

If you have any questions concerning this notice or the presence of ACM in the building, you shall contact the Asbestos Program Manager.

The return of one signed copy of this Notice constitutes your receipt of the above information and your agreement with the requirements contained herein.

Receipt Acknowledged by (Type or Print Name) _____

Signature _____ Date: _____

Title (Type or Print) _____

Company Name (Type or Print) _____

Company Address (Type or Print) _____

Company Telephone Number (Type or Print) _____

4. OPERATIONS AND MAINTENANCE ACTIVITIES

The O & M activities to be conducted at the facility shall include routine and emergency cleaning of areas and surfaces that are potentially asbestos-contaminated (i.e., areas where visibly damaged friable ACBM exists on floors, on equipment, or on other surfaces), small-scale projects of short duration for removal or repair of ACBM, and periodic reinspection of locations within the facility where ACBM have been identified. Employees involved in O & M activities shall be required to complete the O & M training specified in Part 3 of this O & M Program.

The following O & M activities are to be carried out only by employees with appropriate training:

1. Specific work practices for spot repairs of ACBM, and routine cleaning of visibly asbestos-contaminated areas or surfaces.
 - a. All persons other than those involved in the O & M activity shall be restricted from entry to the area by physically isolating the area. For spot repairs, airtight barriers shall be constructed to insure that asbestos fibers released during abatement activities are contained within the work area. The use of glovebags will be permitted in place of a barrier for repair of ACBM located on pipes.
 - b. Warning signs shall be posted at the entrance to each work area. The warning sign shall read as follows:

**DANGER
ASBESTOS
CANCER AND LUNG DISEASE HAZARD
AUTHORIZED PERSONNEL ONLY
RESPIRATORS AND PROTECTIVE CLOTHING
ARE REQUIRED IN THIS AREA**

- c. Air handling systems shall be shut off or temporarily modified to prevent entry of air from the work area into other parts of the building and to restrict other sources of air movement.
- d. All personnel within work areas shall be required to wear personal protective equipment. Full-body disposable fiber-resistant suits with foot coverings and hoods shall be worn over clothing while personnel remain within work areas. In addition, respirators shall be worn in accordance with the OSHA requirements for respiratory protection. At a minimum, half-mask dual-cartridge respirators equipped with HEPA filters shall be worn while remaining in the work area.

4. OPERATIONS AND MAINTENANCE ACTIVITIES (cont.)

- e. When cleaning asbestos-contaminated floors or surfaces, personnel shall use proper work practices. Floor shall be cleaned by wet mopping, steam cleaning, and/or HEPA vacuuming. Other surfaces shall be cleaned by wet cleaning/wiping or by HEPA vacuuming. Vacuums without HEPA filtration shall not be used to clean asbestos-contaminated surfaces. Creating dust shall be avoided. All wet cloths, rags, or mops used to clean asbestos-contaminated surfaces shall be disposed of as described in Part 4.(4) below.
 - f. Spot repair shall be performed only on less than 3 linear feet or 3 square feet of insulation, and shall be conducted only in instances where asbestos abatement is not the principal purpose of the operation. Spot repairs of pipe, tank, or other thermal system insulation shall be conducted by patching sections of insulation using patching compounds of nonasbestos cement to fill in large gouges or missing sections of insulation. The insulation surfaces thus patched shall then be covered with fiberglass cloth impregnated with plaster. The fiberglass cloth shall be applied as follows:
 - i. Cut a sufficiently large section of fiberglass cloth to cover the affected areas of insulation. This cloth shall be wrapped around the entire diameter of the affected pipe.
 - ii. The fiberglass cloth shall be dipped in a bucket of water and carefully placed over the damaged section of insulation without creating dust or debris. The cloth shall be smoothed by hand so that the cloth remains firmly attached to the insulation.
 - iii. Any dust or debris created by this operation shall be cleaned by wet cleaning or HEPA vacuuming.
 - g. Documentation of all spot repairs shall be maintained with the permanent building records. This documentation shall include, as a minimum, the identity of the skilled trades worker performing the spot repair, the date the spot repair was performed, the specific location of the repair, the methods used, the quantity of the asbestos involved, and receipts for the disposal of any asbestos waste.
2. Specific work practices for spot removal of ACBM by glovebag technique.
- a. Glovebag operations shall be conducted in conformance with the work practices set forth in the Occupational Safety and Health Administration (OSHA) Asbestos Regulation for Construction (29 CFR 1926.58 and 1926.1101). A glovebag is a single-use device that shall be disposed of after removal of a single section of ACBM pipe insulation.

4. OPERATIONS AND MAINTENANCE ACTIVITIES (cont.)

- b. Glovebag operations shall be allowed only for removing less than three (3) linear feet of pipe insulation for operations where the principal purpose is not asbestos abatement. No ACBM insulation shall be removed without prior approval of the Asbestos Program Manager.
 - c. All requirements outlined in this Part 4 (1) (a), (b), (c), and (d) shall be adhered to when performing glovebag operations.
 - d. Glovebags shall be installed so that they completely cover the pipe in such a manner as to prevent leakage of air or asbestos fibers. The arms, open edges, and other openings in the glovebag shall be sealed with duct tape.
 - e. The ACBM shall be wetted before its removal and shall be maintained in a wet condition inside the glovebag.
 - f. The upper portion of the glovebag and surfaces from which asbestos has been removed shall be cleaned by wet wiping until no visible material remains.
 - g. Removed ACBM shall be deposited in the bottom of the glovebag. A HEPA vacuum shall be employed to exhaust air from the bag. NOTE: Do not use vacuum without HEPA filtration to exhaust excess air from the glovebag. The glovebag and its contents shall be removed from the pipe and immediately containerized in a second, labeled, 6-mil thick polyethylene bag before disposal.
3. Maintenance activities other than small-scale projects of short duration. NOTE: All fiber release episodes, major or minor, shall be immediately reported to the Asbestos Program Manager.
- a. Minor fiber-release episode (i.e., the falling or dislodging of three (3) square or linear feet or less of friable ACBM).
 - i. Thoroughly saturate the debris using wet methods in such a manner as to minimize disturbance of fibers.
 - ii. Place the asbestos debris in a sealed, leak-proof container.
 - iii. Clean the area by HEPA vacuuming and wet wiping/mopping of all visible debris in the area. NOTE: Do not use vacuums without HEPA filtration to clean asbestos-contaminated surfaces. All wet cloths, rags, or mops used to clean asbestos debris shall be disposed of as described in Part 4.(4) below.
 - iv. Repair the area of damaged ACBM with materials such as asbestos-free spackling, plaster, cement, or insulation, or seal with latex paint or an encapsulant.

4. OPERATIONS AND MAINTENANCE ACTIVITIES (cont.)

- v. Only employees who have received appropriate O & M training shall perform this work.
- b. Major fiber-release episode (i.e., the falling or dislodging of more than three (3) square or linear feet of friable ACBM).
 - i. Immediately restrict entry into the area and post signs to prevent entry into the area by persons other than those necessary to perform the response action.
 - ii. Shut off or temporarily modify the air handling system to prevent the distribution of fibers to other areas in the building.
 - iii. Contact the area supervisor.
 - iv. Only a licensed Asbestos Abatement Contractor shall conduct the response action for any major fiber-release episode and only after the appropriate regulatory agencies are notified.
- 4. Waste disposal procedures.
 - a. Wastes include process wastes, housekeeping wastes, removal job wastes, contaminated disposable protective clothing, and filters.
 - b. Vacuum bags and filters shall not be cleaned. Instead, they shall be sprayed with a fine water mist and placed into a labeled waste container.
 - c. Process and housekeeping wastes shall be wetted with water or a mixture of water and wetting agent (penetrating-type fluid) before packaging them in disposable containers.
 - d. ACBM from removal jobs shall be disposed of in leak-proof, double 6-mil thickness plastic bags, plastic-lined cardboard containers, or plastic-lined metal containers. These wastes, which shall be wet when removed, shall be sealed in containers before they dry out in order to minimize fiber release during handling.
 - e. All asbestos generated at the facility shall be placed in a designated storage area(s). The asbestos waste shall be labeled, transported, and disposed of according to the United States Environmental Protection Agency (U.S. EPA) regulation Title 40 CFR Part 61.

5. PERIODIC REINSPECTION

At least once every six months, each building that contains ACBM or is assumed to contain ACBM shall be reinspected. The inspection shall be conducted by individuals familiar with the building and the locations of ACBM. Those individuals shall have been trained to perform O & M tasks or trained as Asbestos Inspectors. The findings of the reinspections shall be reported to the Asbestos Program Manager, and they shall be kept on file.

At a minimum, the following activities shall be performed during the reinspection:

1. Visually inspect all areas that are identified in the survey report as containing ACBM or as assumed to contain ACBM.
2. Record the date of the reinspection, name of the inspector, and changes in the condition of the materials, including damage due to water, contact, and other damage. Changes in building use that may have an impact on ACBM, such as installation of new equipment, shall be recorded.
3. Submit the information identified in the reinspection for inclusion in the survey report.

A checklist similar to the one in Figure 5-1 shall be used for the periodic reinspections.

In addition, air monitoring to detect airborne asbestos fibers in the building may be used to provide supplemental information during the physical and visual reinspection. Increases in airborne fiber concentrations from earlier levels may indicate unseen damage or disturbance to ACBM and may provide early warning of a potential problem to the Asbestos Program Manager.

Exterior window caulking	Main Building			
Transite cement board on ceiling above heaters	OMS Building			
Rolled paper pipe insulation and associated mud fittings	OMS Building			
Vibration dampener cloth	OMS Building			

6. RECORDKEEPING

The facility shall maintain records on employee training, personal air monitoring, medical surveillance, reinspection results, cleaning and other Operations and Maintenance activities, and asbestos abatement performed at the facility. In addition, minor and major fiber-release episodes shall be recorded and kept with this O & M Program.

Employee records concerning personal air monitoring and medical surveillance shall be maintained as outlined in the OSHA Regulation 1910.1001. This regulation requires that these records be kept on file for at least thirty (30) years.

For each preventive measure and response action taken for ACBM, the facility shall keep records of the following:

1. A detailed written description of the measure or action, including methods used, the location where the measure or action was taken, reasons for selecting the measure or action, starting and completion dates of the work, names and addresses of all contractors involved, and, if ACBM are removed, the name and location of the storage or disposal site of the ACBM. Refer to Appendix M for detailed procedures for each type of response action.
2. The name and signature of any person collecting any air sample, the locations where samples were collected, date of collection, the name and address of the laboratory analyzing the samples, the date of analysis, and the method of analysis.
3. A record of the periodic reinspection required every six (6) months; the name of the inspector, the date, and changes in the conditions of materials noted during the periodic inspection.
4. A description of Operations and Maintenance activities, the name of each person performing these activities, the start and completion dates of the activities, the locations where such activities occurred, a description of the activities used, including preventive measures, and if ACBM are removed, the name and location of the storage or disposal site of the ACBM.
5. A description of each fiber-release episode, the date and location of the episode, the method of repair, preventive measures or response action taken, the name of each person performing the work, and, if the ACBM are removed, the name and location of the storage or disposal site of the ACBM.

ASBESTOS ABATEMENT SURVEY
UNITED STATES ARMY RESERVE CENTER
BRISTOL, RHODE ISLAND

PROJECT SCOPE:

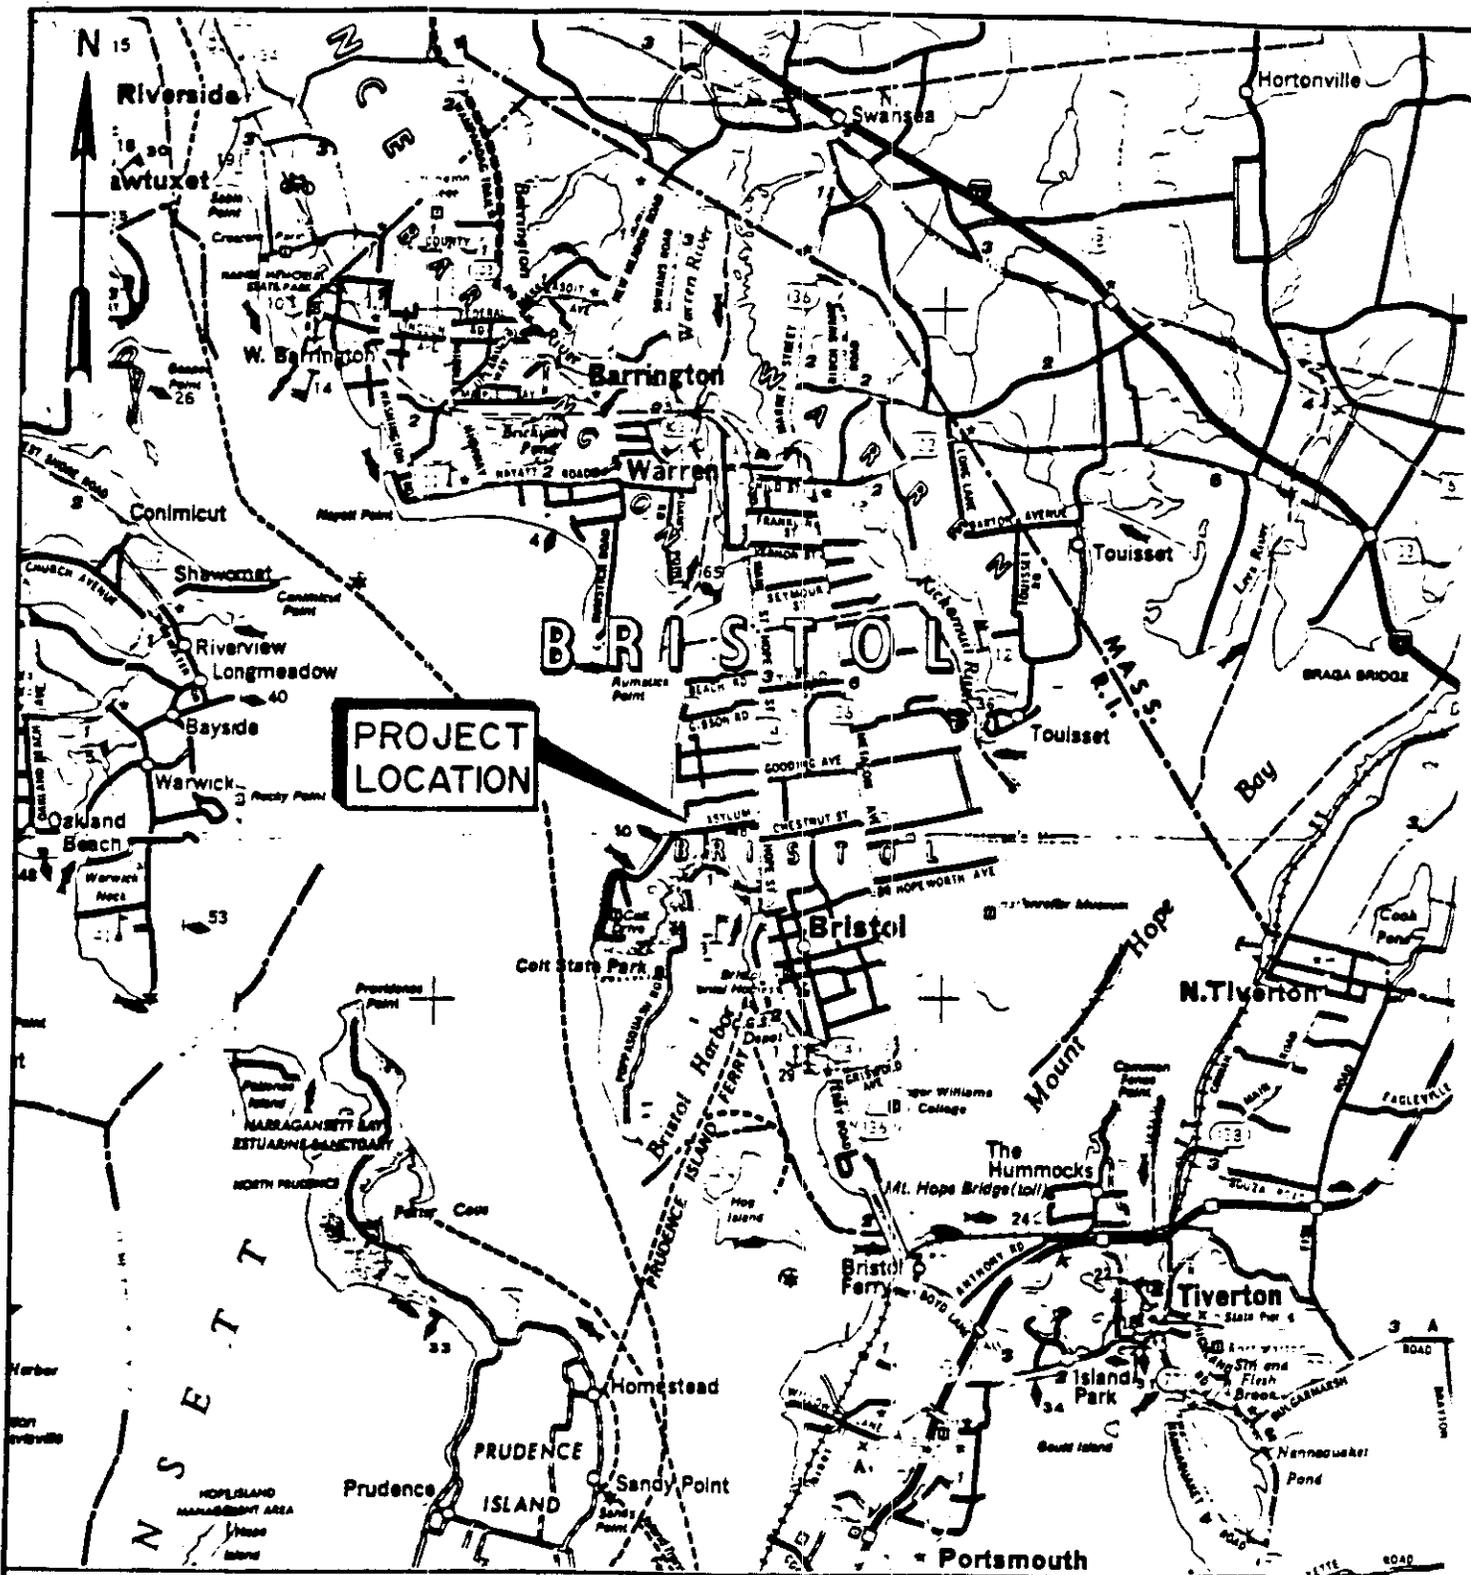

This survey report presents the results of the site inspection, sampling, analysis, and assessment of asbestos-containing building materials (ACBMs) at the United States Army Reserve Center (USARC) in Bristol, Rhode Island, conducted under the Installation Support Program of Fort Devens.

On 13 February 1990, sampling was performed by Nancy Amidon and David Leclair of the Water Quality and Environmental Laboratory, USACE, New England Division (NED). A site inspection was conducted on 11 September 1990 by Mark DeSouza and Jenny Tan of Civil Engineering Branch, NED.

SITE DESCRIPTION:

The USARC in Bristol, Rhode Island consists of two buildings, originally constructed in 1958. (See Plate 1 - Location Map, and Plate 2, Vicinity Map.) The main administration and training building was not included in this study, having been completely reconstructed in 1988. The focus of this study is the separate two-bay Organizational Maintenance Shop (OMS), located to the right of the main building (when viewed from the parking lot).

The total floor area of the OMS Shop is approximately 2340 square feet. (See Plate 3 - Floor Plan.) As-built drawings of the complex are available at the Directorate of Engineering and Housing, Ft. Devens.

PLATE 2

ASBESTOS ABATEMENT SURVEY PROCEDURES:

The following survey procedures describe how the USARC was inspected, sampled and analyzed to detect the presence of Asbestos-Containing Building Material (ACBM).

1. Site Inspection

Each area of the Organizational Maintenance Shop was examined thoroughly to locate and quantify all suspect ACBM. The condition and accessibility of the suspect material was assessed at each location. The condition of the material was evaluated as having either no significant damage, moderate damage or significant damage. Accessibility was defined as low, medium, or high, based on the degree of difficulty of access to the material.

The suspect material was categorized into homogeneous groups, each group defined as an area of surfacing material, thermal system insulation material, or miscellaneous material that is uniform in color and texture. To the degree possible, the specific material comprising each homogeneous group was identified. A particular homogenous group was often represented at many different locations throughout the building. The results of the site inspection, listed by homogeneous group, are presented in Appendix A: SITE INSPECTION DATA.

2. Sampling and Testing

Bulk samples of each homogeneous group were collected and analyzed for the presence of asbestos. The samples were analyzed by Eastern Analytical Laboratories, Inc. which is accredited by the National Bureau of Standards, NVLAP (Lab 1005) for asbestos analysis of bulk samples using Polarized Light Microscopy with optional Dispersion Staining (PLM/DS).

Using these procedures, the laboratory determined the amount of asbestos as a percentage of the total composition of the material. The laboratory also classified the asbestos material into one of two categories, friable and non-friable. Friable materials can be crumbled, pulverized or reduced to powder by hand pressure. Non-friable is the opposite of friable. The sample numbers, locations, and test results are given in Appendix B: LABORATORY TEST RESULTS.

3. Analysis

The asbestos abatement survey results were determined by analyzing the inspection data and the results of sampling and testing. The survey results are based on the assumption that if one sample from any homogeneous group was found to contain asbestos then the entire homogeneous group was considered to be ACBM. If all samples from a homogeneous group did not contain asbestos, then the entire homogeneous group was considered to be free of asbestos.

ASBESTOS ABATEMENT SURVEY RESULTS:

Of the four homogeneous groups (Groups 1 through 4, as described in Appendix A) of suspect material present in the building, two were found to contain asbestos and two were classified as asbestos-free. Results of the survey are as follows:

Asbestos Detected:

GROUP 3 - THERMAL SYSTEMS INSULATION - PIPE FITTINGS

Group 4 - CEMENT-ASBESTOS BOARD

Asbestos was detected in samples taken from each of the homogeneous groups identified above. The results, describing the integrity of the ACBMs, are presented in Table 1 on the following page.

Asbestos Not Detected:

GROUP 1 - THERMAL SYST. INSULATION - PIPE COVERING
(FIBERGLASS)

GROUP 2 - THERMAL SYST. INSULATION - PIPE COVERING (PAPER)

Asbestos was not detected in any of the samples taken from the above homogeneous groups so they are considered to be free of asbestos.

PLATE 3

APPENDIX A

SITE INSPECTION DATA (By Homogeneous Group)

The four homogeneous groups identified at the Bristol OMS and their corresponding locations are listed below. The condition and accessibility of the material, as well as the bulk sample numbers, are also recorded for each homogeneous group. See the Floor Plan (Plate 3) for locations.

USARC, Bristol, RI:

- GROUP 1. THERMAL SYSTEMS INSULATION - PIPE COVERING (FIBERGLASS):
Location: Maintenance Garage.
Condition: No Significant Damage.
Accessibility: high.
Sample No.: 7949.
- GROUP 2. THERMAL SYSTEMS INSULATION - PIPE COVERING (PAPER):
Location: Maintenance Garage.
Condition: Moderate Damage.
Accessibility: high.
Sample No.: 7950.
- GROUP 3. THERMAL SYSTEMS INSULATION - PIPE FITTINGS:
Location: Maintenance Garage.
Condition: No Significant Damage.
Accessibility: medium.
Sample No.: 7951.
- GROUP 4. CEMENT-ASBESTOS BOARD:
Location: Maintenance Garage - above ceiling-mounted unit heaters.
Condition: No Significant Damage.
Accessibility: medium.
Sample No.: 7952.

APPENDIX B

LABORATORY TEST RESULTS

<u>SAMPLE NO.</u>	<u>MATERIAL</u>	<u>LOCATION</u>	<u>TEST RESULTS</u>
7949	pipe insulation	DS-1, garage	negative
7950	pipe insulation	DS-2, garage	negative
7951	elbow insulation	DS-3, garage	POSITIVE
7952	sheet insul. board	DS-4, garage ceiling	POSITIVE

Following are the complete laboratory results for the above-listed samples.

**US ARMY RESERVE CENTER DRAIN SURVEY
SUMMARY and GENERAL COMMENTS**

PAGE 1 OF 6

Facility ID #: RI001 Center Name: Quinta - Gamelin USARC

Address: Asylum Road City: Bristol State: RI

Site Point of Contact: Mr. Douglas Date of Survey: 20-21 Jun 94

1. Regulatory Compliance Violations:

No regulatory violations were observed during the site visit.

2. Potential Regulatory Compliance Violations:

ENSR had no available plans which showed the design or plumbing connections for Wash Rack Number 1 (WR-1). Although water was poured down WR-1, ENSR was unable to determine the outfall. There was no apparent oil/water separator associated with WR-1. The USARC currently has no vehicles assigned and USARC personnel indicate WR-1 is not used. If the outfall of WR-1 is a dry well and, in the future, vehicles are assigned to the USARC, the use of WR-1 would be a violation of Rhode Island environmental regulations, especially without an oil/water separator. There are no floor drains in the OMS Building.

3. Recommended Actions to Improve Environmental Practices:

Storm Drain Number 3 (SD-3) and SD-4 are in the immediate vicinity (within 35-feet) of the underground 2,000 gallon No. 2 fuel oil tank. There is a potential for a spill during refueling of the fuel tank to enter either SD-3 or SD-4. It is recommended that either a dike be placed around the refueling area or that the facility establish a policy to cover SD-3 and SD-4 during refueling operations.

4. Potential Problems:

Within a day of ENSR's site visit there was a collapse of the cover to a concrete box which was part of a septic system. The box was dry, which indicated that this part of the system was not currently in use. ENSR confirmed with the local municipal sanitary sewer system that the USARC was not connected to the municipal sanitary sewer system, but has its own septic system.

5. Uncompleted Inventory Items:

a. SD-1 is in a grassy area to the southeast of the USARC. USARC personnel did not think that SD-1 was on the USARC property; however, based on plans available SD-1 does appear to be on USARC property. The outlet pipe indicated that SD-1 drained to a headwall in the median of Asylum Road. Although ENSR poured a large amount of water down SD-1, ENSR could not verify where the water was draining.

b. Verify the outfall of WR-1.

6. Other Comments:

a. There were no roof drains from the OMS building. Storm water drains off the roof, which is sloped to the north, and falls to the ground surface.

b. Green paint was observed to have dried on the top of the grate for SD-6.

c. By visually aligning outflow pipes from the SDs, SD-2 through SD-7 appeared to drain into a seasonal pond designed to collect storm water.

At the time of the ENSR site visit the pond was dry. ENSR attempted to verify the outflow, but could not establish sufficient flow volume of water in the storm drain system to cause flow into the pond.

7. Data Gathering Parameters and Limitations

This report contains the results of a survey conducted under a series of agreed constraints and limitations described in Section 7.1 below. In addition, site-specific factors may have affected the quality or completeness of data gathered and these are described in Section 7.2 below.

Section 7.1

Surveys were conducted using plans obtained by the Corps of Engineers New England Division from the 94th Regional Support Command drawing vault at Fort Devens, MA. The best available site and interior plans on which the surveys were based, in many instances, did not contain:

- a. up-to-date information;
- b. a complete property boundary;
- c. storm water drainage data; and/or
- d. plumbing information.

In some cases, no site and/or interior plans were provided and information was hand-sketched by the survey team.

Data collection was limited to the information that could be gathered in the assigned time frame (ranging from one to two days). No supplementary data collection was performed.

- a. Outfalls to municipal sanitary or storm sewer could not be determined because either manways were located in the middle of streets and could not be safely accessed or a visit to the municipal authorities, which could not be performed within the assigned time frame, would be required to confirm connections.
- b. Information about rooms and/or areas which were not made accessible to the survey team was provided by the facility manager or other facility personnel.
- c. Drains shown on field maps are shown in their approximate location. Locations were not scaled off.
- d. Drainage associated with purely sanitary purposes such as sinks, water bubblers, toilets, or bermed shower drains was not inventoried. Shower drains which were not located in a bermed area and thus could potentially collect drainage other than sanitary were inventoried as floor drains.
- e. Slop sinks which were located on the floor in the janitors closets and could potentially collect drainage other than sanitary were inventoried. Slop sinks attached to the wall were not inventoried.
- f. Military organizational maintenance (-20 level and above) facilities, within EPA Region I, are considered as industrial facilities and, therefore, require an NPDES storm water permit. Because of this requirement, roof drains were inventoried for buildings in which greater than organizational maintenance is performed because these buildings would be considered industrial facilities.
- g. Surrounding property was classified by usage such as residential, industrial, commercial, or woodland according to the visual observations of the survey team. No additional research was performed to confirm this property classification.
- h. The status of drains and pretreatment systems was determined by observation only.
- i. Surface drainage directions were estimated based on observation of land contours. Drainage directions were not determined by observing water flow.
- j. Water meter pits and non-PCB transformers were not inventoried and thus are not depicted on the field map.
- k. Features on the map which did not directly affect the drainage survey were considered to be outside the scope of the field survey and thus were not updated to reflect current status.
- l. Vehicles parked on the site or equipment stored on site or inside the building were not moved to survey for drains.
- m. OMS work pits were inventoried as containing a floor drain based on information from facility personnel. The presence of a floor drain in the work pit could not be confirmed by visual observation because the work pits were either cemented in, covered by equipment, filled with water, or the sump of the work pit was covered by a grate which could not be removed.

Section 7.2

- a. The site plans and building interior plans available did not reflect the current building on site. The facility manager provided the survey team with an updated site plan which reflected the current building on site.
- b. The complete property boundary was not shown on the available plans.
- c. The facility manager reported that no maintenance is performed in the OMS Building.

US ARMY RESERVE CENTER - DRAIN SURVEY

FACILITY ID#: RI001 CENTER NAME: Quinta - Gamelin USARC ADDRESS: Asylum Road
 CITY: Bristol COUNTY: Bristol STATE: RI SURVEYED BY: W. Kidd, M. Healey - ENSR
 COMMAND: 76th SITE CONTACT(S): (Name/Rank/Title) Mr. Douglas/Civilian DATE OF SURVEY: 20-21 JUN 94
 WEATHER (Day 1) Sunny, low 80's. Day 2 Sunny, low 80's.
 REFERENCE SITE PLAN - TITLE: Site Utility Plan Dwg. No. File No. 7582-6504
 DRAWING DATE: 22 OCT 86 CONTRACTOR: King-Architects/Minges Ass. SHEET NUMBER: 4 of 21 OTHER: Sheet Reference No. C-3

INDEX ON SITE PLAN	ROOM NUMBER/ LOCATION	DRAIN		OUTFALL		TREATMENT		POTENTIAL CONTAMINANTS	REGULATORY COMPLIANCE STATUS

SD - 5	South of OMS building.	CIU	OBS	SRN	PNO	NONE		ANT, BAT, DEG, DES, GAS, POL, WOL, (4)	IN
SD - 6	West of SD - 5.	CIU	OBS	SRN	PNO	NONE		POL, observed paint stains on grate.	IN
SD - 7	West of USARC building.	CIU	OBS	SRN	PNO	NONE		POL	IN

COMMENTS: (1) FD-7 collects drainage from the air conditioning unit. (2) There is a pipe from SD-1 heading towards a headwall in the drainage swale in the median of Asylum Road. After adding water to SD-1, we still could not verify the headwall to be the outfall of SD-1. (3) SD-3 and SD-4 are located within 35 feet of an underground fuel oil tank. (3) SD-4 and SD-5 could potentially collect drainage from the OMS building, although the OMS building is not currently in use.

US ARMY RESERVE CENTER - DRAIN SURVEY

COMMENTS: (5) There is no apparent outfall for WR-1. (6) There is no apparent pretreatment system for WR-1.

Explanations of report codes follow inventory sheets.

**US ARMY RESERVE CENTER - DRAIN SURVEY
REPORTING CODE EXPLANATIONS**

PAGE 5 OF 6

DRAIN.

TYPE.

- CW - A can wash is a hard surfaced area with a drain, outside, usually next to a kitchen used for washing garbage cans.
- F - A funnel drain collects drainage through a funnel and does not collect any floor drainage directly. These are often found in the boiler rooms.
- FD - A floor drain is a grated drain collecting drainage from the floor.
- GP - A grease platform is an elevated structure onto which vehicles are driven for maintenance. A drain is associated with this structure.
- OUT - An outlet is the defined point where the effluent of a pipe discharges.
- RD - A roof drain collects drainage from a roof usually to discharge onto the ground surface or into the storm drainage system.
- SD - A storm drain collects outdoor surface drainage usually in the form of a catch basin or drop inlet.
- UIC - An underground injection chamber collects drainage to discharge directly into the ground.
- WR - A wash rack is a hard surfaced area with a drain designated for washing vehicles.

STATUS.

- BLK - The drain is blocked or filled with debris and does not operate properly.
- CIU - The drain is currently in use and is operating properly.
- OTH - The status of the drain is unique and will be further described with a numbered note.
- POT - The drain does not currently operate properly however, it is potentially operational without an extensive amount of work done.
- REM - The drain has been purposely removed from service.

VERIFIED.

- OBS - The issue has been observed by ENSR personnel during the site visit.
- NOP - The issue has not been observed by ENSR personnel from the available plans.
- PNO - The issue has not been observed by ENSR personnel during the site visit but has been observed from the available plans.
- REP - The issue has been confirmed by a verbal report from the site personnel.

OUTFALL.

TYPE.

- GRW - The outfall discharges into the groundwater on site.
- LCF - The outfall discharges into a leachfield on site.
- SAN - The outfall discharges into a local municipal sanitary system.
- STM - The outfall discharges into a local municipal storm drainage system.
- UNK - The discharge location is unknown.
- WTF - The outfall discharges to a wetlands area off of the site property.
- WTN - The outfall discharges to a wetlands area on the site property.
- WWTP - The outfall discharges to a waste water treatment plant other than municipal.
- DRY - The outfall discharges to a drywell on site.
- INF - The outfall discharges to an intermittent stream off of the site property.
- INN - The outfall discharges to an intermittent stream on the site property.
- SRF - The outfall discharges to a stream or a river off of the site property.
- SRN - The outfall discharges to a stream or a river on the site property.
- SWF - The outfall discharges to standing water off of the site property.
- SWN - The outfall discharges to standing water on the site property.

VERIFIED.

- OBS - The issue has been observed by ENSR personnel during the site visit.
- NOP - The issue has not been observed by ENSR personnel from the available plans.
- PNO - The issue has not been observed by ENSR personnel during the site visit but has been observed from the available plans.
- REP - The issue has been confirmed by a verbal report from the site personnel.

**US ARMY RESERVE CENTER - DRAIN SURVEY
REPORTING CODE EXPLANATIONS**

PAGE 6 OF 6

TREATMENT.

TYPE.

- ANS - An acid neutralizing sump is a treatment system usually associated with drainage from a battery storage area.
- DET - A detention basin is a treatment system to separate sediment from storm drainage.
- GRT - A grease trap is a treatment system used to separate grease from the kitchen drainage.
- OWS - An oil water separator is a treatment system used to separate oil and other LNAPL materials from drainage.
- RT - A running trap is a treatment system used to prevent back flow into drainage pipes.
- UNK - It is unknown if the drainage has a treatment system.

STATUS.

- CIU - The treatment system is operating but currently in use and is operational.
- MAT - The treatment system does not function properly and needs maintenance.
- NOT - The treatment system does not operate.
- OCC - The treatment system operates occasionally.

POTENTIAL CONTAMINANTS

- ANT - Anti-freeze.
- BAT - Battery acid.
- CBR - Chemical, biological, or radioactive agents.
- DEG - Degreasing solvent (product).
- DES - Diesel fuel.
- FER - Lawn fertilizer.
- FLO - Fuel oil.
- GAS - Gasoline.
- HAZ - Hazardous wastes.
- JAN - Janitorial supplies.
- OIL - Oil (product).
- OTH - The potential contaminant is unique and will be further described with a numbered note.
- POL - Any combination of petroleum, oil and lubricants.
- UNK - It is unknown if there are any potential contaminants.
- WEP - Potential contaminants may occur due to weapons cleaning in the area.
- WOL - Waste oil.

REGULATORY COMPLIANCE.

- CND - The status of compliance can not be determined based on available information.
- IN - The facility is in compliance, based on available information.
- OUT - The facility definitely violates regulatory compliance.
- POUT - The facility could potentially be out of compliance.

US ARMY RESERVE CENTERS NATURAL RESOURCES SURVEY TABLES

FACILITY ID#: RI001
CENTER NAME: Bristol, Rhode Island – Quinta – Gamelin USARC

TABLE OF CONTENTS

FILE NAME:

RI001NRM	<u>DATA COLLECTION AND REPORTING ISSUES</u>
RI001NRS	<u>SUMMARY TABLE</u> FOR ALL NATURAL RESOURCES
RI001NR1	<u>TABLE A1</u> -WILDLIFE AND VEGETATION SPECIES OBSERVED AND EXPECTED TO OCCUR ON THE USARC(EXPECTED BIRDS ARE ON TABLE A5).
RI001NR2	<u>TABLE A2</u> -FEDERAL AND STATE PROTECTED SPECIES POTENTIALLY OCCURRING ON THE USARC BASED ON DATA PROVIDED BY THE U.S.FISH AND WILDLIFE SERVICE(USFWS) AND STATE NATURAL HERITAGE PROGRAMS(NATURAL DIVERSITY DATA BASE) OR WILDLIFE AGENCIES.
RI001NR3	<u>TABLE A3</u> -STATE AND FEDERAL PROTECTED PLANT SPECIES POTENTIALLY OCCURRING ON THE USARC.
RI001NR4	<u>TABLE A4</u> - AMPHIBIANS AND REPTILES WHOSE RANGES INCLUDE THE USARC.
RI001NR5	<u>TABLE A5</u> - BREEDING BIRDS WHOSE RANGES INCLUDE THE USARC, INCLUDING POTENTIAL NESTING SPECIES.
RI001NR6	<u>TABLE A6</u> - MAMMALS WHOSE RANGES INCLUDE THE USARC.
RI001NRF	<u>REFERENCES</u>

LETTER FROM THE STATE NATURAL HERITAGE PROGRAMS, INCLUDING RECORDS OF PROTECTED SPECIES ON OR NEAR THE USARC. INCLUDED IS A CURRENT(AS OF MARCH 1, 1994) LIST OF STATE PROTECTED PLANTS, INVERTEBRATES, AMPHIBIANS, REPTILES, MAMMALS, AND BIRDS.

LETTER FROM THE USFWS, INCLUDING A LIST OF PROTECTED PLANTS, INVERTEBRATES, AMPHIBIANS, REPTILES, MAMMALS, AND BIRDS THAT COULD POTENTIALLY OCCUR ON OR NEAR THE USARC.

DATA COLLECTION AND REPORTING ISSUES

US ARMY RESERVE CENTER NATURAL RESOURCE INVENTORY

US ARMY RESERVE CENTER – NATURAL RESOURCE INVENTORY

FACILITY ID#: RI001

CENTER NAME: Bristol, Rhode Island – Quinta – Gamelin USARC

A. CONTRACT SCOPE – OF – WORK

- Review federal regulations governing preparation of Natural Resource Management Plans for USAR sites.
- Conduct a site visit and inventory existing natural resources based on review of existing on-site reports and a general site walkover. A formal wetland delineation is not a part of this scope.
- Provide to the 94th RSC two copies of the two (2) page draft spreadsheet and map for review, and two copies of the final spreadsheet and map. The final spreadsheet will also be provided on computer disk.
- Delineate vegetative habitats and land uses on the site map provided by the 94th RSC, in pencil.
- Attend three (3) in-progress review meetings in Waltham or at Ft. Devens.
- The project will be completed in approximately 12 months from award date, which was 29 September, 1993.

B. GENERAL DATA COLLECTION AND REPORTING ISSUES THAT ARE COMMON TO ALL CENTERS

- The site inventory was limited to a one or two day visit.
- The inventory could not be conducted during the optimum season at each Center for the following reasons:
 - 1) Waiting to initiate inventories until the spring (mid-April) would not have permitted completion of surveys at all 43 Centers, provide an adequate review period for the 94th RSC, and allow ENSR to complete the final reports by the delivery date of 30 October 1994.
 - 2) A one or two day survey would not have provided a complete set of natural resource data even if it had been conducted in the spring. For example, amphibian surveys would need to be conducted in April and May, while breeding bird surveys should be conducted in early June.
 - 3) Similarly, surveys for protected plants would need to be conducted over a two to four month period, based on the flowering season for each protected species.
- Access to the Center early in the morning (bird studies) and at night (amphibian surveys) were generally impractical due to on-site military personnel availability.

It should be noted that representative breeding bird data were collected at only a few of the Centers.

- The vegetative mapping and land use delineations were plotted on site plans provided by CENED. At some Centers, accurate or up-to-date maps were not available. For a number of Centers, the site plans provided did not include the entire property.
- Limited information was collected for adjacent properties and habitats.
- Development of Natural Resource Management Plans were not within the scope of this project.
- No attempt was made to identify and map every plant at each Center. If several individuals of the same species occurred on a Center, the average height was indicated on the summary legend on the facility base map.

C. CENTER – SPECIFIC DATA COLLECTION ISSUES

Note : Some site specific data, such as weather, survey dates, contacts, etc. are included on the Summary Table for each Center.

- 1) The Facility Base Map does not include the entire property to the northwest. A new base map should be developed.

FACILITY ID#: RI001 CENTER NAME: Bristol – Quinta – Gamelin USARC ADDRESS: Asylum Road
 CITY: Bristol COUNTY: Bristol STATE: RI SURVEYED BY: Jim Duncan – ENSR
 COMMAND: 76th SITE CONTACT(S):(Name/Rank/Title) Mr. Douglas DATE OF SURVEY: 20 JUNE 94

SUMMARY AND RECOMMENDATIONS:

SUMMARY:

Well maintained lawn and landscaping.
 Center adjacent to bike path and state park.
 Center bordered on three sides by successional woodland approximately 20–30 years old.
 There is a large cemetery just east of the Center.
 The pond in the woodland on the west side of the Center is much smaller than indicated on existing maps. This pond is seasonal, and most of the water comes from storm runoff from the Center parking lots. Some water may also come from runoff to the north, but there is a large rock drainage between the Center property line and the bike path.

RECOMMENDATIONS:

Plant native fruit-bearing shrubs and low trees in the lawn and along fence.
 Erect American robin/house finch/barn swallow/eastern phoebe nesting platforms on Center buildings (8 total).
 Erect chickadee/eastern bluebird/house wren/nuthatch nesting boxes in woodlands and along fence (14 total).

RECOMMENDATIONS ARE ONLY SUGGESTIONS AND ARE NOT MEANT TO SERVE AS A MANAGEMENT PLAN. PERMITS MAY BE REQUIRED FOR SOME OF THESE ACTIONS.

RE: 7 Army Reserve Centers
Statewide, RI

Dear Mr. Duncan,

Thank you for contacting the Rhode Island Natural Heritage Program for information regarding rare species and ecologically significant natural communities in the vicinities of the 7 Army Reserve Centers throughout Rhode Island.

At this time, we are not aware of any rare plants or animals or ecologically significant natural communities in these areas.

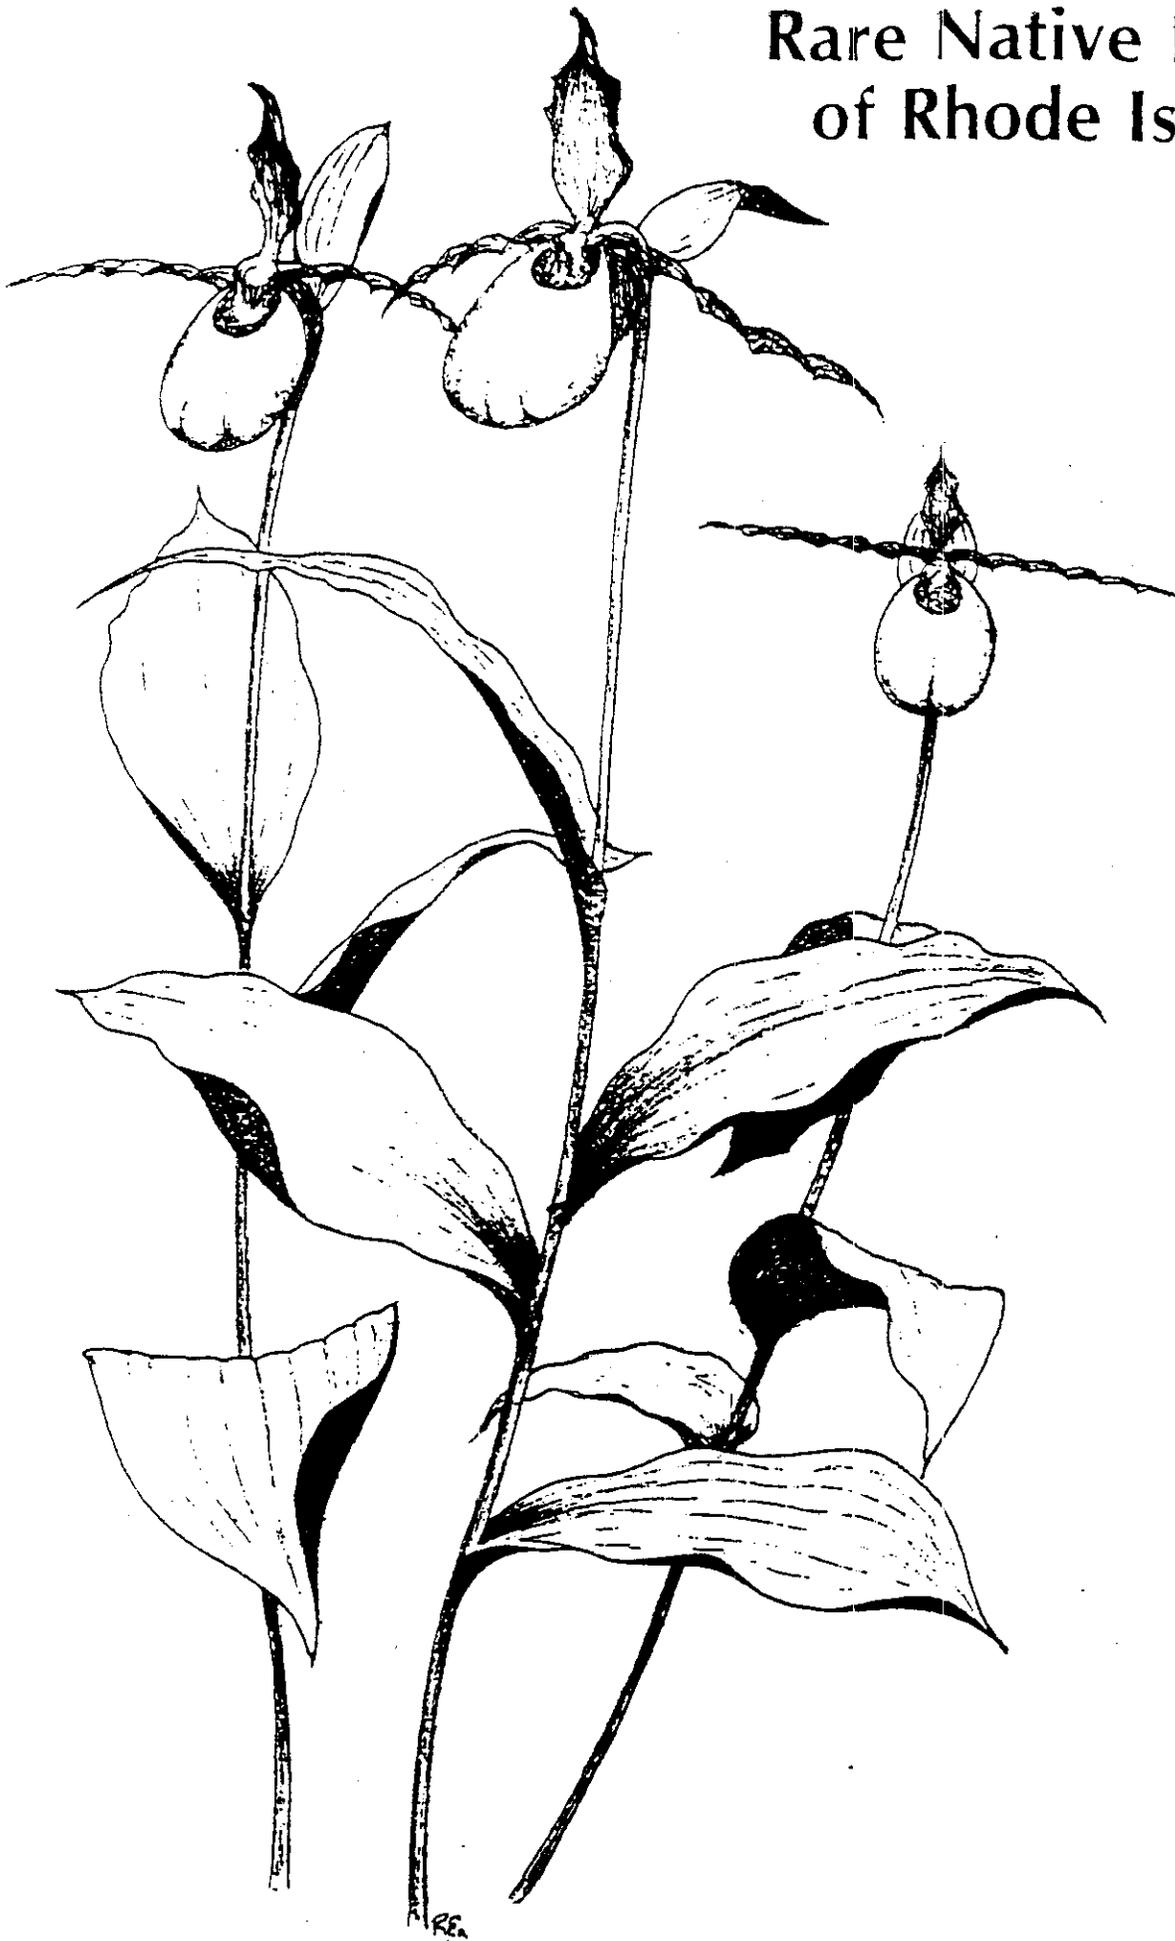

As our inventory is ongoing, more information on these areas may become available in the future.

Sincerely,

Joanne Michaud
Data Manager/Environmental Planner
Natural Heritage Program

JM/jm

Rare Native Plants of Rhode Island

Rhode Island
Natural Heritage
Program

Cover: The Large Yellow Lady's-slipper (Cypripedium pubescens) is currently found in Rhode Island at 4 locations in Providence County. Habitat for this showy orchid is generally rich, moist woodlands where other rare plants may also be found. Subject to habitat depletion by land development and collection of individual plants this species is listed as State Threatened in Rhode Island.

RARE NATIVE PLANTS OF RHODE ISLAND - April, 1995

Prepared by

Richard W. Enser
Rhode Island Natural Heritage Program
Rhode Island Department of Environmental Management
Providence, Rhode Island

The flora of Rhode Island includes roughly 1950 plants of which approximately 1500 (77%) are considered to be native. The following list identifies those members of the native flora which are the rarest in Rhode Island and most in need of conservation. All plant taxa listed herein are currently being tracked by the Rhode Island Natural Heritage Program through a comprehensive mapping and computerized database. Information regarding the location and status of rare elements, including plants, animals and natural communities, is used to establish priorities for land preservation and to provide guidance within the environmental review process.

The Rhode Island Natural Heritage Program was established in 1978. During the first year of operation an initial listing of rare plants was derived from two previously published lists. These were "Endangered Plants of Rhode Island", by Dr. Irene Stuckey, and "Rare and Endangered Vascular Plant Species in Rhode Island", by Dr. George L. Church and Richard L. Champlin. The latter publication was the Rhode Island contribution to a regional assessment of rare plants prepared by the New England Botanical Club in cooperation with the U.S. Fish and Wildlife Service.

These initial listings were based primarily on the considerable field experience of the authors, along with some cursory examination of specimens housed at several regional herbaria. Since 1978, the Natural Heritage Program has tapped many sources, particularly additional herbaria and published reports. The author, along with several other professional and amateur botanists, has also spent considerable time verifying the locations and identities of rare plants throughout the state. This combined effort has made the Natural Heritage Program's database the largest repository of rare plant information in Rhode Island.

The rare plant list has been amended annually to reflect the most up-to-date knowledge of plant distribution, status, and taxonomy. Although the number of plants on the rare list has remained relatively constant, certain species have been deleted when found to be more common than originally thought, while others have been added following similar status assessment, or when newly discovered in Rhode Island. (These may be new colonizers or may have been overlooked in the past.) This edition of the "Rare Native Plants of Rhode Island" includes 296 plants, or approximately 19% of the native state flora.

ABOUT THIS LIST

The list is arranged alphabetically by botanical family, genus and species. Trinomials are used to describe certain subspecies and varieties.

Nomenclature

The primary taxonomic authority for scientific names is:

Gleason, Henry A. and Arthur Cronquist. 1991. Manual of vascular plants of Northeastern United States and adjacent Canada, 2nd Edition. New York Botanical Garden. 910p.

Two additional taxonomic treatments have been referenced for the following:

1) Ferns, Fern Allies, and Gymnosperms:

Flora of North America Editorial Committee. 1993. Flora of North America, Volume 2: Pteridophytes and Gymnosperms. Oxford Univ. Press. 320p.

The Flora of North America is a synoptic floristic account of the plants of North America north of Mexico. It is intended to serve both as a means of identifying plants within the region and as a systematic conspectus of the North American flora. Each update of the Rhode Island rare plant list will follow the taxonomic treatment of the Flora of North America as each volume is published.

2) Orchids:

Luer, C.A. 1975. The native orchids of the United States and Canada, excluding Florida. New York Botanical Garden. 361p.

Appropriate synonymy is included in cases where names have changed since the publication of the 8th Edition of Gray's Manual of Botany (Fernald, 1950), or where names differ from more recently published authorities.

Extant Populations

The number refers to extant populations known since 1978. (There are a few instances of populations being destroyed since this date - these have not been included in the count.)

The number of distinct populations of some species, especially aquatics, is often difficult to determine. Population numbers for these species are based on the assumption that single occurrences within the same reach of a river, or separate portions of a pond, lake, or other contiguous wetland system are considered one population.

Status

The status of each species is designated by letter codes as defined below:

- (FE) Federally Endangered (2 species currently listed)
- (FT) Federally Threatened (No species currently listed)
- (SE) State Endangered Native taxa in imminent danger of extirpation from Rhode Island. These taxa meet one or more of the following criteria:
1. A taxon currently under review for listing by the U.S. Fish & Wildlife Service as Federally endangered or threatened. Those identified as C2 (Category 2) are taxa for which information indicates that proposing to list under the Federal Endangered Species Act is possibly appropriate, but for which sufficient data on biological vulnerability and threat are not currently available to support proposed rules.
 2. A taxon with 1 or 2 known or estimated total populations in the state.
 3. A taxon apparently globally rare or threatened, estimated to occur at approximately 100 or fewer sites range-wide.

Plants listed as State Endangered are protected under the provisions of the Rhode Island State Endangered Species Act, Title 20 of the General Laws of the State of Rhode Island. This law states, in part (20-37-3):

"No person shall buy, sell, offer for sale, store, transport, import, export, or otherwise traffic in any animal or plant or any part of any animal or plant whether living or dead, processed, manufactured, preserved or raw (if) such animal or plant has been declared to be an endangered species by either the United States secretaries of the Interior or Commerce or the Director of the Rhode Island Department of Environmental Management."

- (ST) State Threatened Native taxa which are likely to become State Endangered in the future if current trends in habitat loss or other detrimental factors remain unchanged. These taxa meet one or more of the following criteria:
1. A taxon with 3 - 5 known or estimated populations.
 2. A taxon with more than 5 known or estimated populations in the state, but especially vulnerable to habitat loss.

- (SI) State Interest Native taxa not considered to be State Endangered or Threatened at the present time, occurring at 6 - 10 sites in the state.
- (C) Concern Native taxa which do not qualify under other categories but are additionally listed due to various factors of rarity and/or vulnerability.
- (SH) State Historical Native taxa which have been documented for the state during the last 150 years but for which no extant populations are known. The year of documented occurrence is included.

Note on Status Designation:

For most listed plants the definitions outlined above have been adhered to when assigning status. In some cases, especially for those species which have not received intensive field inventory, the Concern category is assigned even if only 1-2 populations are known to be extant. These species are targeted for additional inventory and may be assigned to other categories when their actual status in Rhode Island has been clarified. Taxa included in this category are designated with an asterisk (*).

FUTURE REVISIONS

The listing of rare species is an ongoing process requiring annual revisions to reflect the best scientific information available concerning the circumstances of rarity, as well as our increased knowledge of the native flora. Submission of additional data on species currently listed, or on other species which may warrant listing, is encouraged. Information should be sent to:

Rhode Island Natural Heritage Program
Rhode Island Department of Environmental Management
83 Park Street
Providence, Rhode Island 02903
Telephone: (401) 277-2776

ACKNOWLEDGEMENTS

Many people have shared their knowledge of the Rhode Island flora, helping me to provide the most complete assessment of rare plants in the state. In particular I would like to thank the following individuals: Caren A. Caljouw, Richard L. Champlin, Gilbert George, Lisa L. Gould, Julie Lundgren, Joanne Michaud, William Nichols, Christopher Raithel, Thomas Rawinski, Bruce Sorrie, Irene Stuckey, Gordon Tucker.

INDEX OF GENERA

(Names in parentheses are no longer in use, but refer to synonym entries.)

<u>Genus</u>	<u>Family</u>
<u>Vascular Cryptogams</u>	
Asplenium	Aspleniaceae
Botrychium	Ophioglossaceae
(Camptosorus)	Aspleniaceae
(Dryopteris)	Dryopteridaceae
Equisetum	Equisetaceae
Gymnocarpium	Dryopteridaceae
Isoetes	Isoetaceae
Lycopodiella	Lycopodiaceae
Lycopodium	Lycopodiaceae
Lygodium	Schizaeaceae
Matteuccia	Dryopteridaceae
Ophioglossum	Ophioglossaceae
Pellaea	Pteridaceae
Phegopteris	Thelypteridaceae
(Pteretis)	Dryopteridaceae
(Thelypteris)	Thelypteridaceae
Woodsia	Dryopteridaceae
<u>Gymnosperms</u>	
Larix	Pinaceae
Picea	Pinaceae
Taxus	Taxaceae
<u>Angiosperms</u>	
Acer	Aceraceae
Actaea	Ranunculaceae
Adlumia	Fumariaceae
Agalinis	Scrophulariaceae
Agrimonia	Rosaceae
Aletris	Liliaceae
Allium	Liliaceae
Amaranthus	Amaranthaceae
Andromeda	Ericaceae
Anemone	Ranunculaceae

Anemonella	Ranunculaceae
Angelica	Apiaceae
Aralia	Araliaceae
Arabis	Fabaceae
Arceuthobium	Viscaceae
Arenaria	Caryophyllaceae
Arethusa	Orchidaceae
Aristida	Poaceae
Artemisia	Asteraceae
Asarum	Aristolochiaceae
Asclepias	Asclepiadaceae
Aster	Asteraceae
Atriplex	Chenopodiaceae
Bidens	Asteraceae
Calopogon	Orchidaceae
Cardamine	Brassicaceae
Carex	Cyperaceae
Cassia	Fabaceae
Castilleja	Scrophulariaceae
Caulophyllum	Berberidaceae
Chenopodium	Chenopodiaceae
Chrysopsis	Asteraceae
Circaea	Onagraceae
Claytonia	Portulacaceae
Clematis	Ranunculaceae
Coeloglossum	Orchidaceae
Conopholis	Orobanchaceae
Corallorhiza	Orchidaceae
Coreopsis	Asteraceae
Cornus	Cornaceae
Corydalis	Fumariaceae
Crotalaria	Fabaceae
Cryptotaenia	Apiaceae
Cyperus	Cyperaceae
Cypripedium	Orchidaceae
Dalibarda	Rosaceae
Desmodium	Fabaceae
Diplachne	Poaceae
Draba	Brassicaceae
Drosera	Droseraceae
Elatine	Elatinaceae
Eleocharis	Cyperaceae
Elymus	Poaceae
Epilobium	Onagraceae
Eriophorum	Cyperaceae
Eupatorium	Asteraceae

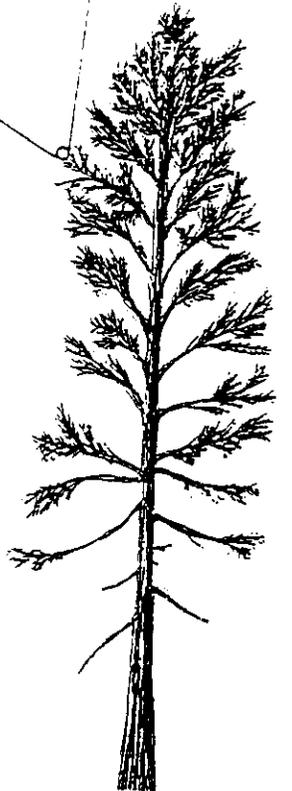

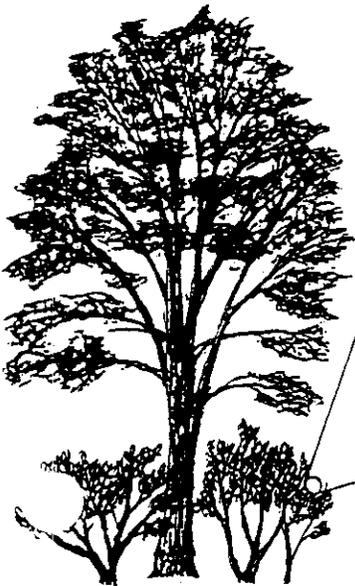

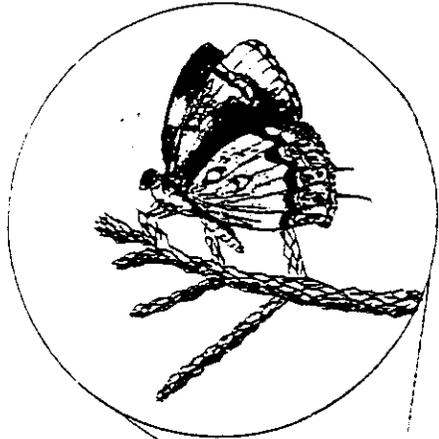

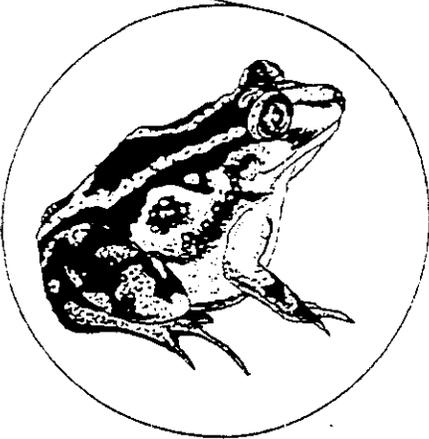

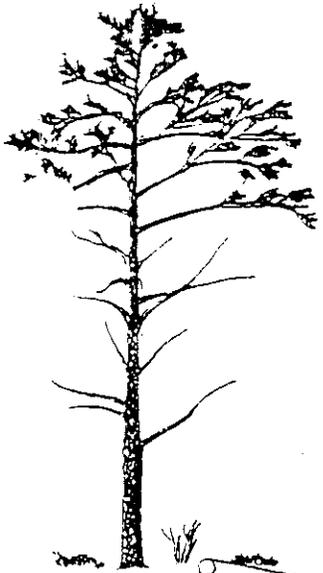

Fraxinus	Oleaceae
Fuirena	Cyperaceae
(Galearis)	Orchidaceae
Gaultheria	Ericaceae
Gaylussacia	Ericaceae
Gentiana	Gentianaceae
Gentianopsis	Gentianaceae
Geranium	Geraniaceae
(Gerardia)	Scrophulariaceae

Xyris	Xyridaceae
Zizania	Poaceae
Zizia	Apiaceae

Rare Native Animals of Rhode Island

March, 1995

ABOUT THIS LIST

The list is divided by vertebrates and invertebrates and is arranged taxonomically according to the recognized authority cited before each group. Appropriate synonymy is included where names have changed since publication of the cited authority.

The Natural Heritage Program's Rare Native Plants of Rhode Island includes an estimate of the number of "extant populations" for each listed plant species, a figure which has been helpful in assessing the health of species over their entire range. Because animals are mobile, some exhibiting annual long-distance migrations, it is not possible to derive a population index which can be applied to all animal groups. The status assigned to each species (see definitions in next section) provides some indication of its range and relative abundance. More specific and pertinent data is available from the Natural Heritage Program and the Rhode Island Endangered Species Program.

STATUS

The status of each species is designated by letter codes as defined below:

(FE) Federally Endangered (7 species currently listed)

(FT) Federally Threatened (2 species currently listed)

(SE) State Endangered Native species in imminent danger of extirpation from Rhode Island. These taxa meet one or more of the following criteria:

1. A species currently under review for listing by the U.S. Fish and Wildlife Service as Federally endangered or threatened. Those identified as C2 (Category 2) are taxa for which information indicates that proposing to list under the Federal Endangered Species Act is possibly appropriate, but for which sufficient data on biological vulnerability and threat are not currently available to support proposed rules. Designation of C2 status by the Federal government does not automatically warrant an SE rank in Rhode Island unless one of the following criteria also apply.
2. A species with 1 or 2 known or estimated total populations in the state.
3. A species apparently globally rare or threatened, and estimated to occur as approximately 100 or fewer populations range-wide.

Animals listed as State Endangered are protected under the provisions of the Rhode Island State Endangered Species Act, Title 20 of the General Laws of the State of Rhode Islands. This law states, in part (20-37-3):

"No person shall buy, sell, offer for sale, store, transport, export, or otherwise traffic in any animal or plant or any part of any animal or plant whether living or dead, processed, manufactured, preserved or raw (if) such animal or plant has been declared to be an endangered species by either the United States secretaries of the Interior or Commerce or the Director of the R. I. Department of Environmental Management."

(ST) State Threatened Native species which are likely to become state endangered in the future if current trends in habitat loss or other detrimental factors remain unchanged. These species meet one or more of the following criteria:

1. A species with 3 to 5 known or estimated populations in the state.
2. A species with more than 5 known or estimated populations in the state, but exhibiting particular vulnerability to habitat loss.

(SI) State Interest Native species not considered to be State Endangered or State Threatened at the present time, but occur in 10 or fewer sites in the state.

(C) Concern Native species which do not apply under the above categories but are additionally listed due to various factors of rarity and/or vulnerability; or, species which may warrant listing in higher categories but status information is presently not well known.

(SH) State Historical Native species which have been documented for the state during the last 100 years but for which current occurrences are unknown. When known, the year of the last documented occurrence is included.

FUTURE REVISIONS

The listing of rare species is an ongoing process requiring annual revisions to reflect the best scientific information available concerning the circumstances of rarity, as well as our increased knowledge of the native fauna. Submission of additional data on species currently listed, or on other species which may warrant listing, is encouraged. Information should be sent to:

Rhode Island Natural Heritage Program

INVERTEBRATES

The task of evaluating the status of invertebrates in Rhode Island has been initiated for selected groups. At this time the list primarily includes freshwater bivalves (clams and mussels) and the following insect groups: lepidopterans (moths and butterflies), odonates (dragonflies and damselflies), silphids (burying beetles), and cicindelids (tiger beetles). Additional taxa will be added in the future upon the completion of further research and inventory. The following publications are a partial listing of taxonomic references:

Hodges, R.W., et. al. 1983. Check list of the Lepidoptera of America north of Mexico. E.W. Classey Ltd. and Wedge Entomological Research Foundation. 1-284.

Johnson, R.I. 1980. Zoogeography of North American Unionacea (Mollusca: Bivalvia) north of the maximum Pleistocene glaciation. Bull. Museum Comparative Zoology. 149:77-189.

BIVALVE MOLLUSKS

Unionoida (freshwater mussels)

Margaritiferidae (pearlshell:)

<u>Margaritifera margaritifera</u>	Eastern Pearlshell	C

FISH

Petromyzontidae (lampreys)

<u>Lamprolaima appendix</u>	American Brook Lamprey	SI
-----------------------------	------------------------	----

Acipenseridae (sturgeons)

<u>Acipenser oxyrinchus</u>	Atlantic Sturgeon	SH
-----------------------------	-------------------	----

AMPHIBIANS

Plethodontidae (lungless salamanders)

<u>Gyrinophilus porphyriticus</u>	Northern Spring Salamander	SI
-----------------------------------	----------------------------	----

Pelobatidae (spadefoot toads)

<u>Scaphiopus holbrookii</u>	Eastern Spadefoot	ST
------------------------------	-------------------	----

Ranidae (true frogs)

<u>Rana pipiens</u>	Northern Leopard Frog	SI
---------------------	-----------------------	----

REPTILES

Note: Several reptiles are protected by regulations of the Rhode Island Division of Fish and Wildlife, which identifies those species as "protected", and that possession without permit is prohibited at all times. Those species protected under these regulations are indicated by "P" in the status column.

Cheloniidae (sea turtles) *

<u>Caretta caretta</u>	Atlantic Loggerhead	FT
<u>Chelonia m. mydas</u>	Atlantic Green Turtle	FT
<u>Lepidochelys kempii</u>	Atlantic Ridley	FE

Dermochelyidae (leatherback turtles) *

<u>Dermochelys c. coriacea</u>	Atlantic Leatherback	FE
--------------------------------	----------------------	----

* occur as transients in offshore waters only.

Emydidae (turtles)

<u>Clemmys guttata</u>	Spotted Turtle	P
<u>Clemmys insculpta</u>	Wood Turtle	SI/P
<u>Malaclemys t. terrapin</u>	Northern Diamondback Terrapin	SE/C2/P
<u>Terrapene carolina</u>	Eastern Box Turtle	P

Colubridae (colubrid snakes)

<u>Carphophis amoenus</u>	Eastern Worm Snake	SI
<u>Elaphe obsoleta</u>	Black Rat Snake	SI
<u>Heterodon platirhinos</u>	Eastern Hognose Snake	C
<u>Thamnophis sauritus</u>	Eastern Ribbon Snake	C

Viperidae (vipers)

<u>Crotalus horridus</u>	Timber Rattlesnake	SH (1972)/P
--------------------------	--------------------	-------------

BIRDS

Note: Except in the case of the Federally listed Bald Eagle and Peregrine Falcon, birds are listed based on their breeding status in Rhode Island.

Podicipedidae (grebes)

<u>Podilymbus podiceps</u>	Pied-billed Grebe	SE
----------------------------	-------------------	----

Ardeidae (herons)

<u>Botaurus lentiginosus</u>	American Bittern	SE
<u>Ixobrychus exilis</u>	Least Bittern	C

**FEDERAL PROTECTED SPECIES
INFORMATION**

United States Department of the Interior

FISH AND WILDLIFE SERVICE
New England Field Offices
22 Bridge Street, Unit #1
Concord, New Hampshire 03301-4986

March 16, 1994

Jim Duncan
ENSR Consulting and Engineering
35 Nagog Park
Acton, MA 01720

Dear Mr. Duncan:

This responds to your letter dated January 21, 1994 requesting information on the presence of Federally listed and proposed endangered or threatened species in relation to 39 Army Reserve Centers in New England. The centers reviewed occur in: Connecticut (8), Maine (3), Massachusetts (12), New Hampshire (5), Rhode Island (7) and Vermont (4).

Based on information currently available to us, no Federally listed or proposed threatened and endangered species under the jurisdiction of the U.S. Fish and Wildlife Service are known to occur in the project area, with the exception of occasional transient endangered bald eagles (Haliaeetus leucocephalus) or peregrine falcons (Falco peregrinus anatum). However, we suggest that you contact the following for information on state listed species that may be present:

Nancy Murray
Connecticut Natural Diversity Data Base
79 Elm St., P.O. Box 5066
Hartford, CT 06106-5066
203-566-3540

Sue Gawler
Maine Natural Areas Program
State House Station 130
Augusta, Maine 04333
(207) 289-6800

Pat Huckery
Massachusetts Natural Heritage Program
Division of Fisheries and Wildlife
100 Cambridge St., Boston, MA 02202
(617) 727-9194

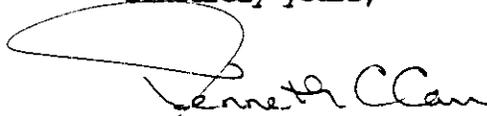

David Moore
New Hampshire Natural Heritage Inventory Program
P.O. Box 856, Concord, New Hampshire 03302-0856
(603) 271-3623

Rick Enser
Rhode Island Natural Heritage Program
83 Park St.
Providence, RI 02903
(401) 277-2776,

Chris Fichtel
Vermont Natural Heritage Program
Agency of Natural Resources
10 South, 103 S. Main St.
Waterbury, VT 05676
(802) 244-7331

Lists of Federally designated endangered and threatened species in all of the New England state are included for your information. Thank you for your cooperation and please contact Susi von Oettingen of this office at (603) 225-1411 if we can be of further assistance.

Sincerely yours,

for Gordon E. Beckett
Supervisor
New England Field Offices

ARCHITECTURAL DESCRIPTION *(continued)*

The Private First Class John Quinta--Private Arthur J. Gamelin United States Army Reserve Center, designed by Reisner & Urbahn and built as a 200-man center in 1957, originally consisted of an L-shaped, one-story structure. This structure consisted of two components, a 158-foot by 48-foot administrative and classroom block, and a 72-foot by 52-foot drill hall wing connected to the main block at the west end of the north elevation by a narrow, 20-foot long corridor. The administrative and classroom block was demolished in 1988, and a U-shaped, one-story, brick building designed by King Architects was built around the original drill hall. The exposed concrete slab foundation forms a clearly-visible band around the base of the building. The new structure has a complex roof, with planes sloping gently up from the walls to form a low-pitch gable-on-hip at the front (south) side, and then meeting at a ridge which ends at the drill hall. The drill hall retains its original flat roof, with a discrete center ridge for drainage. The main roof planes are continued by the wings that embrace the east and west sides of the drill hall. All eaves are filled with wide, corrugated dark metal coping, and the legend "U.S. ARMY RESERVE" appears on this coping at the front of the building. The rectangular and square, recessed windows with two vertical panes on protruding concrete sills are reminiscent of the fenestration on the original building. The entrance, including a wheelchair access ramp, is now located at the east side of the building, and is flanked by wing walls, and marked with an Army Reserve medallion. The new administration and classroom sections include a rifle range, a windowless, blank brick addition located at the northwest corner of the structure. Other interior features include administrative and classroom space, kitchen, arms vault, boiler room and equipment storage. The original drill hall is located inside the U-shaped new construction. The drill hall has brick walls and a flat, built-up roof edged with the same wide, ribbed metal coping used on the new construction. The drill hall was originally lit by bands of windows at the tops of the long, side walls. These windows, now covered over, expressed the location of the support piers for the steel I-beams which carry the diagonally-braced, open-web roof joists. The drill hall has a thick, concrete slab floor to support the weight of heavy military vehicles. The north wall of the drill hall contains a roll-type garage door for vehicle access and a personnel door.

One related outbuilding, the Maintenance Shop (MS), is located approximately 50 feet north of the rear of the drill hall. The maintenance shop, also designed by Reisner & Urbahn, and built in 1959, is a 53-foot by 46-foot, two-bay, one-story, brick vehicle garage, with a slightly pitched, built-up roof, capped with wide metal coping. Two large roll-type garage doors with small oval windows fill the front (south) bays, and the side walls are divided into three bays by brick pilasters which support the roof beams. The maintenance shop is lit by a band of windows high on the rear (north) elevation. Personnel access doors are located on the east and west sides of the building.

The Pfc. John Quinta--Pvt. Arthur Gamelin Reserve Center is located on a 5.3-acre graded lot on the north side of Asylum Road, which is an access road to Colt State Park. The reserve center is bordered by woods to the north, east and west, and open land to the south. An unfenced triangular area of thickets and woods lies to the west. Beyond this wooded area lies the former right-of-way of the Providence, Warren and Bristol Railroad, now a bicycle path. A cemetery is located to the northeast of the reserve center property. The reserve center is open to the street, and fenced off beyond the front of the building. A gated driveway leads to a paved parking area on the east and south sides of the building, and to the maintenance shop. Landscaping is minimal, consisting of open, mown lawns, flowering shrubs, small trees, and ground cover.

INVENTORY FORM CONTINUATION SHEET

New England U.S. Army Reserve Centers

Rhode Island

The original Pfc. John Quinta--Pvt. Arthur Gamelin Reserve Center was an example of the main design phase of a series of similar reserve centers constructed across the United States from the early 1950s to the early 1960s. These spartan buildings were designed according to an architectural program developed by the U.S. Army Corps of Engineers and the New York architectural firm of Reisner & Urbahn, and a later incarnation, Urbahn, Brayton & Burrows. The reserve centers were built from a set of master plans, which were adapted as necessary to conform to military capacity requirements, and modified to conform to specific site configurations. The reserve center design program combined the need for low cost, easy expansion, and uniformity with Contemporary, International Style-derived architectural features such as hard-edged rectangular massing, flat roofs, lack of ornamentation, and emphasis on simple materials and regular rhythms of fenestration. The use of the Contemporary Style, combined with the function and interior layout of the reserve centers, resulted in a building type which resembles primary school architecture, as well as corporate and municipal buildings of the period. This building was extensively altered in the 1988 expansion, although some attempt was made to incorporate the spirit of the original building in the new center, such as the use of similar materials, and especially the rows of recessed windows with protruding concrete sills. The new Pfc. John Quinta--Pvt. Arthur Gamelin Reserve Center is typical of reserve center expansions in terms of the continuity in the use of materials, and functional design.

HISTORICAL SIGNIFICANCE *(continued)*

The United States Army Reserve (USAR) is a Federal military organization distinct from the full-time, professional Regular Army and the state National Guard. The USAR is maintained as a source of personnel to rapidly support the Regular Army in the event of conflict. The USAR is composed of "citizen-soldiers," civilians committed to a period of duty in exchange for benefits and pay. The history of the USAR has been characterized by conflict between the Regular Army, U.S. Presidents, and Congress over the combat role and funding of the USAR. This conflict resulted in early difficulties in reaching projected goals for equipment, facilities, and utilization. The USAR has its origins in the Colonial state militia, informally trained citizens organized against the British Army during the Revolution. The modern USAR has its roots in the Medical Act of 1908, which started a reserve force of medical officers. Distinct organizations of reserve officers and regulars participated in World War I. During the 1930s, the Works Projects Administration provided reserve officers with the opportunity to run Civilian Conservation Corps camps.

The USAR also sent soldiers into combat during World War II. The postwar period was a time of change for the USAR, as emerging Cold War defense philosophy called for a larger reserve force to augment the Regular Army. Reliance on nuclear detente during the Cold War drew attention away from the development of the USAR, and reduced its effectiveness in the Korean War. The USAR was not a major participant in the Vietnam Conflict, as President Lyndon Johnson anticipated the negative political implications of USAR mobilization for an unpopular war. Under Nixon's 1970 Total Force policy, the USAR was made an all-volunteer force with an increased combat role and increased benefits and pay. Overall, USAR equipment and facilities have been increased since World War II. These gains have been vital for USAR units in reaching unit size and readiness requirements.

The USAR remains an active element in the U.S. military establishment. In the event of mobilization, USAR units are assimilated into the Regular Army to provide service and support. Army reservists today are required to attend forty-eight 4-hour drills per year at a Reserve Center, where Army training staff instruct them in procedure and the use of equipment, and one 15-day intensive summer training camp. Military training personnel of the 98th Training Division are stationed at New England reserve centers to provide instruction. USAR activities in New England and New York are controlled by the 94th Regional Support

Rhode Island

Command (RSC) headquartered at Fort Devens, Massachusetts.

Prior to the end of World War II, defense policy makers were already planning for the Cold War. Defense plans called for an increased role for the Army Reserve, which was to augment the Regular Army in times of national emergency. The Army Reserve lacked proper facilities for training and equipment after World War II, and reserve units could not be activated without them. The War Department recommended that the Federal Government appropriate funds for armory (reserve center) land purchases and construction. This appropriation required Congressional approval, and in May 1946, H.R. 5762, a bill for armory construction funds was introduced into Congress. This bill failed due to disagreements over funding allocation and property ownership, as did six other pieces of legislation introduced over four years. On September 11, 1950, the 81st Congress passed H.R. 8594, the National Defense Facilities Act, which gave the reserve components \$250 million for construction over five years. This bill was amended in 1955, allocating another \$25 million for reserve construction.

During this period the reserve components were developing the new reserve center concept. Proposed facility criteria and specifications were collected from numerous military agencies, and approved by the Secretary of Defense. From this information sketches and models were made by the Corps of Engineers, and reviewed by the parties involved. From the resulting comments the Corps of Engineers developed construction criteria, and finished drawings were made by selected outside architects and engineers such as Reisner & Urbahn. Reisner & Urbahn were known by the Corps of Engineers for successful work with National Guard armory design, and were awarded the commission for the New England reserve centers after funding was insured by passage of the National Defense Facilities Act. Due to similar facility needs the reserve center program was overseen by the National Guard Bureau. Designers recognized that due to changing military tactics and technology, instruction space would take precedence over the traditional drill hall in the new architectural environment they were designing. Other requirements included storage space and offices. The reserve centers were typically constructed using inexpensive materials, were devoid of ornamentation, and were designed to blend into their architectural surroundings. Standardization was important for construction efficiency and was key to facilitating the expansible nature of the design, which allowed for additional wings to be added to increase the capacity of the reserve center. The bulk of the Reisner & Urbahn reserve centers were constructed in the mid-1950s, particularly after the additional funds acquired by the amendment of the National Defense Facilities Act in 1955. The Reisner & Urbahn New England reserve center campaign ended in 1964, with 23 reserve centers constructed. After this large commission, reserve facility policy shifted to the utilization of existing defense facilities. This facility was built on 5.3 acres purchased from the Town of Bristol for \$7,700.00 on September 4, 1956. The facility is a non-contributing element within the Poppasquash Farms National Register Historic District.

The function of this reserve center is to provide administrative, classroom, maintenance, and storage space to Army Reserve personnel and assigned Army Reserve units. The reserve center serves as a base of operations for specialized units that can be mobilized and assimilated into the Regular Army when required. At the reserve center, assigned Army Reserve units receive advanced individual training in the use of military equipment, weapons, tactics, and vehicles. In the event of mobilization with a draft, U.S. Army training instructors stationed at the reserve center are deployed to conduct basic training of draftees. Military instruction at the reserve center takes place in the classrooms and in the drill hall, which is used for general assemblies and drill practice and can accommodate large military vehicles. A kitchen is also associated with the drill hall. Administrative office space is provided for full-time unit support personnel, including the Facility Manager, who is responsible for the day-to-day operation and maintenance of the facility; and the Unit Administrator, who is responsible for unit personnel, pay, promotion, and supply. In the event that the assigned reserve units are mobilized, the reserve center also provides home support

INVENTORY FORM CONTINUATION SHEET

**New England U.S. Army Reserve Centers
Rhode Island**

for the units. The reserve center also serves as an Army Reserve recruiting center.

This maintenance shop is a motor vehicle garage used by reserve center personnel for routine periodic maintenance and storage of smaller assigned unit vehicles. Tasks performed at the maintenance shop include oil changes, lubrication, battery filling, light running repairs, and minor maintenance such as tire changing, replacement of light bulbs, and minor painting, tuning and washing. Heavier repairs are performed at a centralized regional Area Maintenance Support Activity (AMSA) facility which is discussed on a separate form. The maintenance shop is now also used for unit equipment storage, with most assigned unit vehicles stored outdoors.

Facility Manager, Quinta-Gamelin, US Army Reserve Center, Asylum Road, Bristol,
RI 02809-1221 1 Dec 93

FOR HQ, Fort Devens, ATTN: Mr John Delcore, Fort Devens, MA 01433-5190

1. Enclosed find ECAAR for this USAR Center with corrections and copies of memorandums and work orders needed to bring this USAR Center into compliance.
2. The 76th Division reorganized its Rhode Island units effective 1 August 1993. Full time personnel were moved on 12 September 1993. I reported for duty at this facility on 20 September 1993 after I assisted with the move of my former unit to Narragansett, Rhode Island. I was informed by the previous facility manager that this report was not done before the reorganization.
3. It has been difficult to complete as the battalion has just been reorganized and my unit administrator duties have been extremely time consuming; however, with the assistance visit from your office I was able to speed up the process.
4. I feel that we are on the right track to be well on the way to getting this facility into environmental compliance.
5. It should be noted that the current Center Commander had no knowledge of this report until I brought it to his attention.
6. POC: Mr. George A. Douglas, DAC, GS-7, Facility Manager (401) 253-3150

DEVENS, MA 01433

SUBJECT: Corrective Action Plan for Draft Environmental Compliance
Assessment Report for USAR Center, Bristol, RI

1. Reference: Memorandum, FCEN-CED-E, FORSCOM, 5 Mar 92, Subject:
Environmental Compliance Assessment Army Reserve (ECAAR) Program
Reporting Requirements (Encl 1).
2. The Fort Devens Team of the Fort Meade Engineer Support Group-
East, 416th Engineer Command, conducted an assessment visit at the
subject facility on 4 Dec 92 and prepared a draft report (Encl 2).
3. The Engineer Support Group-East is forwarding the report for
action involving the preparation of a corrective action plan.
Reference 1, paragraph 3b indicates that the Supporting
Installation originates this plan. The enclosed report contains
suggested corrective actions, which is in accordance with 416th
Engineer Command policy to assist the Supporting Installation in
preparing the Corrective Action Plan. Request you prepare the
Corrective Action Plan and forward the completed plan, in automated
and paper copies, to the Fort Meade Engineer Support Group-East.
4. Upon receipt of the Corrective Action Plan, the Fort Meade
Engineer Support Group-East will assemble a complete draft report
and forward it to FORSCOM with copies to HQ, Fort Devens, the 94th
Army Reserve Command, the 76th Division (TNG), and the USAR Center.
5. The POC for report details is LTC Norman L. Bushee, Fort Devens
Team Leader, (508) 840-8178 or 840-8393. The POC for report
processing by the Engineer Support Group-East is MAJ Ed Irish. The

POC for general communications with the Engineer Support Group-East is SFC Mable Coleman, (301) 677-9733.

Level 1	5

Regulatory Compliance Issues

Level 5

None

Level 4

1. There are no records in the facility's files indicating that the new 3,000 gallon tank has been registered with the RIDEM nor is there written approval in the facility's files from the RIDEM for the construction of the 3,000 gallon tank.

Level 3

1. The facility must conduct a waste determination of the old paint, pesticides and other materials prior to disposal to determine if the waste is hazardous. The facility must apply for a temporary EPA Identification Number prior to disposal as hazardous waste.
2. All USTs must be maintained and operated by trained personnel in compliance with applicable regulations. Facility personnel and a records review did not indicate personnel received training in accordance with Appendix B of Rhode Island's UST Regulations.
3. The petrometer for the 1,000 gallon tank has not been calibrated for accurate readings. Additionally, there were no records in the facility's files pertaining to the proper operation, warranties or maintenance requirements of the system.
5. Review of the facility files did not reveal a log or any other written documentation indicating that either tank is gauged prior to receiving product.
6. There is no documentation in the facility records stating that the facility is not using high sulfur fuel.

Level 2

1. The 3,000 gallon tank is equipped with a petrometer tank level meter; however, the maximum capacity reading of the meter is 2,500 gallons. The maximum capacity reading does not satisfy the volumetric capacity of the tank.

Level 1

None

Environmental Impact Issues

Level 5

1. A wash rack is located on the west side of the maintenance shop at the reserve center; however, it does not appear on any of the blueprints. According to Lieutenant Col. Diehl the wash rack is equipped with an interceptor, but this information could not be verified. Close examination of the sump area resulted in a pungent diesel odor.

Level 4

1. Stressed vegetation was observed on the north side of the maintenance shop. A request was made on March 31, 1989 to have a site investigation performed to determine the cause of the stressed vegetation. Facility personnel indicated that drums of waste automotive products were once stored at the location.

Level 3

None

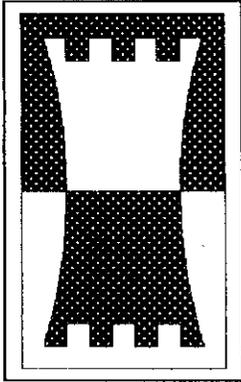

Level 2

1. A new 3,000 gallon tank was installed at the subject facility; however, there were no blueprints or other documentation in the facility's files pertaining to the new tank. Therefore, it was not possible to determine if the facility is in compliance with applicable regulations.

Level 1

1. Asbestos was observed on some of the pipes in the maintenance shop.
2. According to facility personnel the new septic system has not been cleaned since it was installed in 1988.
3. There is a small amount of DS-2 on-site which will require disposal.
4. A 5-gallon bucket filled with a chemical training agent set was found in a storage cabinet in Room 135. Markings on the drum indicate that the material was packaged in 1979 and contains corrosive materials. Facility personnel did not know if the materials were still being used.
5. Four smoke bombs were found in Office 118, posing a fire hazard.

Category I Finding:

Noncompliance with an existing environmental regulation, compliance agreement, or consent order. These may stem from federal, state, or local requirements.

Category II Finding:

Noncompliance with a future deadline in an environmental regulation, compliance agreement, or consent order. These may stem from federal, state, or local requirements.

Category III Finding:

Findings based on management practices that are not based on regulatory requirements. These include findings based on Army Regulations and DOD directives. Category III findings may be positive or negative.

Health and Safety Findings:

Findings related to OSHA, DOT, and NFPA as indicated in the criteria paragraph of the finding and in the requirements column in the ECAS protocol. Health and Safety findings may be regulatory but are not part of the RCS 1383 reporting process and are not eligible for any environmental funding. Health and Safety findings are not classified as I, II, or III.

CHAPTER 1

EXECUTIVE SUMMARY

This draft findings report presents the results of the environmental compliance assessment conducted by the 416th Engineer Command's Fort Devens Facility Engineer (FE) Team at the Quintan-Gamelin USAR Center in Bristol, Rhode Island on 4 December 1992. The assessment was done in accordance with the U.S. Army's Environmental Compliance Assessment System (ECAS). The purpose of this report is to identify environmental compliance problems to the chain of command and identify alternative corrective actions. This report is intended to provide sufficient information for the chain of command to make informed choices on the appropriate corrective actions for its findings. In particular, it is expected that the Support Installation Commander, through his DEH staff, and the ARCOM/MUSARC commander will coordinate the selection of these actions. After their review of this Draft Findings Report (DFR), the resultant corrective actions that address all compliance deficiencies are to be communicated to the 416th FE team. The FE team will prepare a draft final report containing these corrective actions. The draft final report will then be forwarded to the MACOM for coordination and approval. Concurrent copies will be provided to the Support Installation and the ARCOM/MUSARC.

This Environmental Compliance Assessment has reviewed reserve center activities and conditions. It provides a "snapshot in time" of the center's compliance posture. It does not give any guarantee that a regulator will not find other compliance deficiencies. Instead, it identifies weak areas and a means to correct them without the pressure of a regulatory inspection. ECAS is a proactive program which reviews 17 environmental media listed in Table 1-1 and helps the chain of command identify the resources necessary to bring the reserve center into environmental compliance. Along with corrective actions identified by the chain of command, the FE team may assist in developing the necessary resource documents (RCS 1383 exhibits, DA 4283s, and DD 1391s) to feed existing Army resource systems.

1.1 BACKGROUND

An environmental assessment of the USAR Center was conducted on 4 December 1992 by a team of professionals from the Fort Devens Team of the 416th Engineer Command under the direction of LTC Howard C. Dunn, Jr. The assessment was conducted as a part of the Army's environmental review program using the Environmental Compliance Assessment Army Reserve (ECAAR) protocols. The ECAAR protocols, developed by the Department of the Army, establishes the use of environmental assessments to ensure compliance with all applicable US Federal, state, local, Department of Defense (DoD), and Army environmental regulations.

An overall ECAAR evaluation considers the major environmental compliance protocols or areas pertinent at the facility examined. Each area identifies several items: key legislation,

compliance concerns typical of state/local regulations, DoD and Army regulations, plus management practices. The applicability of each area is determined in advance of the evaluation from information provided by facility personnel. Each protocol is annotated to reflect the most current regulations in effect prior to the evaluation.

This evaluation was conducted using the ECAAR manual dated June 1991 and considered 17 protocols:

1. Clean Air Act (CAA)
2. Clean Water Act (CWA)
3. Safe Drinking Water Act (SDWA)
4. Resource Conservation and Recovery Act, Subtitle C, (RCRA-C)
5. Resource Conservation and Recovery Act, Subtitle D,(RCRA-D)
6. Resource Conservation and Recovery Act, Subtitle I, (RCRA-I) and POL Management
7. Comprehensive Environmental Response, Compensation, and Liability Act/Superfund Amendments and Reauthorization Acts (CERCLA/SARA)
8. Toxic Substance Control Act (TSCA)
9. Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA)
10. National Historic Preservation Act (NHPA) and Cultural Resources
11. Endangered Species Act (ESA) and National Resources
12. National Environmental Policy Act (NEPA)
13. Asbestos Management Program
14. Noise Abatement
15. Radon Program
16. Environmental Program Management
17. Hazardous Materials Management

This assessment was conducted by:

LTC Howard C. Dunn, Jr.
MAJ Michael Haire
MAJ Douglas Garner
SFC Bobby Griffis
SFC Stanley Pierce
SSG Michael Hicks
SSG Carl Shoemaker

1.2 SUMMARY OF FINDINGS

The following text briefly summarizes the findings for each compliance protocol. The protocols are discussed in the order that they appear in the report.

1.2.1 Clean Air Act (CAA)

There were no category I or category II findings in this protocol. There were two (2) category III findings. There was no evidence that an emissions inventory had been conducted, and there was no evidence of a CFC & Halon annual report. There were no Health and Safety findings in this protocol.

1.2.2 Clean Water Act (CWA)

There were two (2) category I findings in this protocol. The facility did not have valid SPCCP or ISCP. The facility also does not have containment for oil stored in the boiler room or for the underground storage tanks. There were no category II findings. There were five (5) category III findings. There is no evidence that there is a system to investigate water pollution complaints. There is no oil/water separator for the washrack. There is no Installation On-Scene Coordinator or Installation Response Team. One category III finding relates to missing documentation, and one relates to the lack of safety evaluations/hazardous waste inspections. There were no Health and Safety findings.

1.2.3 Safe Drinking Water Act (SDWA)

There were no category I findings. There were two (2) category III findings in this protocol relating to the lack of a testing/inspection program for the backflow prevention valve on the boiler make-up water line, and missing documentation of water system modifications. There were no category II or Health and Safety findings.

1.2.4 Resource Conservation and Recovery Act, Subtitle C (RCRA-C)

There were two (2) category I findings in this protocol. There were several unlabelled containers of hazardous waste, and hazardous waste accumulation area was not being regularly inspected. There were no category II findings in this protocol. There were two (2) category III findings in this protocol relating to the lack of a Hazardous Waste Management Plan and no annual hazardous waste inventory. There were no Health and Safety findings.

1.2.5 Resource Conservation and Recovery Act, Subtitle D (RCRA-D)

There were no category I, category II, category III, or Health/Safety findings in this protocol.

1.2.6 Resource Conservation and Recovery Act, Subtitle I (RCRA-I) and POL Management

There were two (2) category I findings in this protocol. They related to the UST system not having proper overfill or spill protection, and no UST registration. There were no category II findings. There was one (1) category III finding, concerning the lack of proper release detection systems and substandard UST's. There were no Health and Safety findings.

1.2.7 Comprehensive Environmental Response, Compensation, and Liability Act/Superfund Amendments and Reauthorization Acts (CERCLA/SARA)

There were no category I, or category II findings in this protocol. There was one (1) category III finding in this protocol. The facility has not been screened for past use of hazardous substances and the potential for contamination, especially since a portion of the site is suspected to have been used as a landfill in the past. There were no Health and Safety findings in this protocol.

1.2.8 Toxic Substance Control Act (TSCA)

There was one (1) category I finding in this protocol. There were no PCB labels found on the main pad-mounted electrical transformer. There were no category II, category III, or Health and Safety findings.

1.2.9 Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA)

There were no category I, category II, category III, or Health and Safety findings.

1.2.10 National Historic Preservation Act (NHPA) and Cultural Resources

There were no category I, category II, category III, or Health and Safety findings.

1.2.11 Endangered Species Act (ESA) and Natural Resources

There were no category I, category II, category III, or Health and Safety findings.

1.2.12 National Environmental Policy Act (NEPA)

There were no category I or category II finding in this protocol. There was one (1) category III finding relating to implementing NEPA requirements. There were no Health and Safety findings.

1.2.13 Asbestos Management Program

There were no category I or category II findings in this protocol. There was one (1) category III finding relating to suspected asbestos insulation in the OMS building that may need to be removed. There were no Health and Safety findings.

1.2.14 Noise Abatement

There were no category I or category II findings in this protocol. There was one (1) category III finding. The facility requires an Installation Compatible Use Zone (ICUZ) study. There were no Health and Safety findings.

1.2.15 Radon Program

There were no category I or category II findings in this protocol. There was one (1) category III finding. The facility needs to be tested for radon. There were no Health and Safety findings.

1.2.16 Environmental Program Management

There were no category I or category II findings in this protocol. There were two (2) category III findings. Assistance is required from the Supporting Installation in environmental projects programming (1383 reports) and training of site personnel. Many relevant environmental regulations were not available at the facility. There were no Health and Safety findings.

1.2.17 Hazardous Materials Management

There were no category I or category II findings in this protocol. There was one (1) category III finding, which related to the lack of a listing of hazardous materials. There were three (3) Health and Safety findings. Material Safety Data Sheets are not available for each chemical used at the facility, and chemicals were improperly stored.

CHAPTER 2

BACKGROUND AND SCOPE

This section presents the background and scope for the environmental compliance assessment conducted at the Quintan-Gamelin USARC, Bristol, RI.

2.1 BACKGROUND

The background section presents the objectives of the ECAAR program, a description of the facility and its management structure.

ECAAR Objectives

The objectives of ECAAR are to:

- establish the use of environmental compliance assessments as a means of ensuring the Army's compliance with all applicable DoD and Army environmental laws and regulations.
- assure major commands, facility commanders, environmental quality control committees, environmental coordinators, DEH personnel, and natural resource managers that their environmental programs are effectively addressing environmental problems that could:
 - impact mission effectiveness
 - jeopardize the health of facility personnel or the general public
 - significantly degrade the environment
 - expose the Army and its people to avoidable financial liabilities as a result of non-compliance with environmental requirements
 - erode public confidence in the Army and the defense establishment
 - expose individuals to civil and criminal liability.
- secure information that will permit facility commanders to anticipate and prevent future environmental problems.
- enhance management by establishing a system for environmental compliance management
- provide data for use in identifying, programming, and budgeting environmental requirements
- provide accurate and complete information on the status of facility environmental compliance programs.

Facility Description

The Quintan-Gamelin USARC is located on Asylum Road in Bristol, Rhode Island. The facility is situated on approximately 5.3 acres of land. It is abutted on three sides by Colt State Park. To the south is a residential area. The main building and a 2-bay Organizational Maintenance Shop (OMS) were constructed in 1957, and renovated/expanded in 1985. The Reserve Center and OMS are single story buildings of masonry construction. The Center building contains approximately 13,424 square feet of space. The OMS is now used for unit storage and is no longer used for vehicle maintenance. A room within the OMS is referred to as the Paint Shed and is used to accumulate hazardous wastes.

The real property holder and supporting installation is Fort Devens, Massachusetts. The using MUSARC is the 76th Division (TRNG). The units and members of assigned personnel using the facility are as follows:

<u>USAR Unit</u>	<u>Assigned Personnel</u>
1st Bn 76th Regt, 4th Bde, 76th DIV.	94

There are 2 full time ~~military and~~ civilian personnel assigned to the center.

Management Structure

Management of the environmental mission is a shared responsibility led by the Facility Manager and Unit Commanders. We found that most of the environmental categories covered during the ECAAR review are principally managed by the Fort Devens Environmental Management Office (EMO), the 94th ARCCOM, and the 76th Division (Training) Engineer staff.

Hazardous Materials Management issues are implemented by several organizations including the Directorate of Engineering and Housing, the Fire Department, and the individual units that store and use hazardous materials.

The facility Commander and his staff are responsible for implementing site specific requirements under direction of their higher headquarters.

2.2 SCOPE

The scope section summarizes the facility activities that were reviewed for each environmental category, and the evaluation process.

Activity Review

2.2.1 Clean Air Act (CAA)

The air emission sources reviewed included the following:

- Facility records
- Facility drawings

In addition, the Facility Manager was interviewed and all buildings and grounds examined.

2.2.2 Clean Water Act (CWA)

The water pollution sources reviewed included the following:

- Floor drains
- Unit storage areas
- Storm drainage system
- Facility records
- Facility drawings

In addition, the Facility Manager was interviewed and all buildings and grounds examined.

2.2.3 Safe Drinking Water Act (SDWA)

The sources reviewed included the following:

- Potable water system
- Boiler make-up water system
- Facility records
- Facility drawings

In addition, the Facility Manager was interviewed and all buildings and grounds examined.

2.2.4 Resource Conservation and Recovery Act, Subtitle C (RCRA-C)

The RCRA-C areas reviewed included the following:

- Facility records
- Unit storage areas

In addition, the Facility Manager was interviewed and all buildings and grounds examined.

2.2.5 Resource Conservation and Recovery Act, Subtitle D (RCRA-D)

The RCRA-D areas reviewed included:

- Contract documents for solid waste removal
- Solid waste collection areas

In addition, the Facility Manager was interviewed and all buildings and grounds examined.

2.2.6 Resource Conservation and Recovery Act, Subtitle I (RCRA-I) and POL Management

The RCRA-I areas reviewed included the following:

- Facility underground storage tanks
- Facility records
- Facility drawings

In addition, the Facility Manager was interviewed and all buildings and grounds examined.

2.2.7 Comprehensive Environmental Response, Compensation, and Liability Act/Superfund Amendments and Reauthorization Acts (CERCLA/SARA)

The CERCLA/SARA areas reviewed included the following:

- Facility records
- Facility drawings

In addition, the Facility Manager was interviewed and all buildings and grounds examined.

2.2.8 Toxic Substance Control Act (TSCA)

The TSCA areas reviewed included the following:

- Main building
- Exterior electrical transformers
- Facility records

In addition, the Facility Manager was interviewed and all buildings and grounds examined.

2.2.9 Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA)

The FIFRA areas reviewed included the following:

- Main building
- Fence/property line
- Parking lots
- Facility records

In addition, the Facility Manager was interviewed and all buildings and grounds examined.

2.2.10 National Historic Preservation Act (NHPA) and Cultural Resources

- Facility records

In addition, the Facility Manager was interviewed and all buildings and grounds examined.

2.2.11 Endangered Species Act (ESA) and Natural Resources

- Facility records

In addition, the Facility Manager was interviewed and all buildings and grounds examined.

2.2.12 National Environmental Policy Act (NEPA)

- Facility records

In addition, the Facility Manager was interviewed and all buildings and grounds examined.

2.2.13 Asbestos Management Program

The Asbestos Management Program areas reviewed included the following:

- Facility buildings
- Facility records

In addition, the Facility Manager was interviewed.

2.2.14 Noise Abatement

The Noise Abatement areas reviewed included the following:

- Facility buildings
- Facility records

In addition, the Facility Manager was interviewed.

2.2.15 Radon Program

The Radon Program areas reviewed included the following:

- Facility buildings
- Facility records

In addition, the Facility Manager was interviewed.

2.2.16 Environmental Program Management

The Environmental Program Management areas reviewed included the following:

- Facility records

In addition, the Facility Manager was interviewed.

2.2.17 Hazardous Materials Management

The Hazardous Materials Management areas reviewed included the following:

- Storage areas
- Facility records

In addition, the Facility Manager was interviewed and all buildings and grounds examined.

Applicable Regulations

The ECAAR manual and the regulations of the State of Rhode Island were used as the basis for the environmental assessment of the Quintan-Gamelin USARC. All compliance standards used as the basis for this report were drawn from the aforementioned documents.

Evaluation Procedures

The environmental assessment included a review of facility environmental documentation and inspection of the facility by the assessment team. Personnel interviews were used to provide information. No physical samples were collected at the facility.

MEMORANDUM FOR ENVIROMENTAL MANAGEMENT OFFICE, FORT DEVENS, MA 01433

SUBJECT: Request for Assistance to bring the USARC in Compliance

1. IAW recommendations of ECAAR performed at this USARC on 4 Dec 92 request that Fort Devens Environmental Management Office assist in correcting the below listed findings:
 - a. Request that EMO conduct or contract for an Air Pollution Emissions inventory to be conducted at this USARC.
 - b. Request written Hazardous Waste Management Plan from EMO to comply with finding that USARC does not have plan on file.
 - c. Request that EMO request a copy of current registration certificate from the RI Department of Enviromental Management.
 - d. Request that this Center be provided with Radon Detection Devices for installation as a self help project.
 - e. Request that MSDS be provided to this USARC
 - f. Request that records be screening for past use of Hazardous Substances at this USARC and copies furnished for our files.
2. POC: Mr. George A. Douglas, UA, GS-7

MANUAL QUESTION NUMBER: 06-006

FINDING ID:

FINDING CATEGORY: CLASS I

FINDING TYPE: Negative

EXISTING NOV: NO

LOCATION: INSTALLATION WIDE

IFS FACILITY NUMBER:

FACILITY TYPE: USARC - UNITED STATES ARMY RESERVE CENTER

FINDING DESCRIPTION: The two UST's at the facility do not have a spill containment or overfill protection. Both tanks are heating oil tanks. According to facility records, the 3000-gallon tank was installed in 1988 and the 1000-gallon tank installed in 1960.

CRITERIA: The filling of a UST must include the prevention of overfilling and spilling of the substance. (40 CFR 280.30(a))

FINDING COMMENTS:

SUGGESTED/ALTERNATIVE CORRECTIVE ACTION(S): The Facility Manager should initiate a work order request to retrofit both tanks with spill containment and overfill protection devices on the tank fill pipes. Alternatively, the 1000 gallon tank (for the OMS) should be removed because heat is no longer needed in the OMS as it is used for storage only.

STATUS OF CORRECTION: Work Order #106-3 submitted for installation of Spill Containment & Overfill Protection Devices for Large 3,000 Tank and for removal of 1,000 gallon Tank.

MEMORANDUM FOR ENVIROMENTAL MANAGEMENT OFFICE, FORT DEVENS, MA 01433

SUBJECT: Request for Assistance to bring the USARC in Compliance

1. IAW recommendations of ECAAR performed at this USARC on 4 Dec 92 request that Fort Devens Environmental Management Office assist in correcting the below listed findings:

a. Request that EMO conduct or contract for an Air Pollution Emissions inventory to be conducted at this USARC.

b. Request written Hazardous Waste Management Plan from EMO to comply with finding that USARC does not have plan on file.

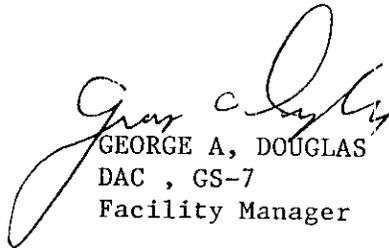

c. Request that EMO request a copy of current registration certificate from the RI Department of Enviromental Management.

d. Request that this Center be provided with Radon Detection Devices for installation as a self help project.

e. Request that MSDS be provided to this USARC

f. Request that records be screening for past use of Hazardous Substances at this USARC and copies furnished for our files.

2-13.1 III GMP FINDING

MANUAL QUESTION NUMBER: 02-013 FINDING ID:

FINDING CATEGORY: CLASS III

FINDING TYPE: Negative EXISTING NOV: NO

LOCATION: INSTALLATION WIDE

IFS FACILITY NUMBER:

FACILITY TYPE: USARC - UNITED STATES ARMY RESERVE CENTER

FINDING DESCRIPTION: The washrack has a drain with no apparent oil/water separator, and it is possible that grease from washing of vehicles may enter soil from collection drain.

CRITERIA: Even where not covered by NPDES permit, stormwater discharge on the installation should be uncontaminated and periodic surveillance of these discharges should be completed. (GMP)

FINDING COMMENTS:

SUGGESTED/ALTERNATIVE CORRECTIVE ACTION(S): The Facility Manager should submit a work order request to have an oil/water separator installed. Until an oil/water separator is installed, the washrack should not be used.

STATUS OF CORRECTION: This Unit does not have a vehicle that utilizes the Wash Rack Work Order # 101-3 has been submitted for

REVIEWER'S COMMENTS: Installation of a Oil Water Separator for this USARC.

7-4.1 III ARMY/DOD FINDING

MANUAL QUESTION NUMBER: 07-004 FINDING ID:

FINDING CATEGORY: CLASS III

FINDING TYPE: Negative EXISTING NOV: NO

LOCATION: INSTALLATION WIDE

IFS FACILITY NUMBER:

FACILITY TYPE: USARC - UNITED STATES ARMY RESERVE CENTER

FINDING DESCRIPTION: The facility did not have available a record of screening for past use of hazardous substances.

CRITERIA: Screening for past use of hazardous substances and the potential for contamination is required to be conducted at all major Army installations and subinstallations, and other properties controlled by the Army. (AR 200-1, para. 9-7a)

FINDING COMMENTS:

SUGGESTED/ALTERNATIVE CORRECTIVE ACTION(S): The Supporting Installation EMO and/or the MUSARC should provide to the Facility Manager a record of screening for past use of hazardous substances.

STATUS OF CORRECTION: Request has been made for records of past use of Hazardous Substances at this USARC

REVIEWER'S COMMENTS: _____

12-3.1 III ARMY/DOD FINDING

MANUAL QUESTION NUMBER: 12-003

FINDING ID:

FINDING CATEGORY: CLASS III

FINDING TYPE: Negative

EXISTING NOV: NO

LOCATION: INSTALLATION WIDE

IFS FACILITY NUMBER:

FACILITY TYPE: USARC - UNITED STATES ARMY RESERVE CENTER

FINDING DESCRIPTION: There is no formal policy for implementing NEPA requirements.

CRITERIA: The installation must perform a number of activities in the implementation of NEPA. (40 CFR 1501.2 and AR 200-2 para. 1-4k)

FINDING COMMENTS:

SUGGESTED/ALTERNATIVE CORRECTIVE ACTION(S): The Facility Manager/Commander should require each unit to appoint a responsible person to monitor unit activities and assure NEPA requirements are met.

STATUS OF CORRECTION: Additional Duty Order published for the above listed Position

CHAPTER 7

RHODE ISLAND PROJECT FACILITIES

This report section contains the environmental, prehistoric, and historic contexts along with fieldwork results and conclusions/recommendations for further investigation at each of the six Rhode Island 94th RSC project facilities. These facilities include: the Quinta-Gamelin USARC in Bristol, the MG William B. Pendlebury USARC in Cranston, the AMSA 68 in Lincoln/Smithfield, the Fort Greene USARC in Narragansett, the CPT Jonathan H. Harwood USARC in Providence, and the PVT Lloyd S. Cooper III USARC in Warwick.

Quinta-Gamelin USARC (RI001)

Facility Description

The Quinta-Gamelin USARC is located on the north side of Asylum Road in Bristol, Bristol County, Rhode Island (Figure 7-1). The 5.3-acre facility lot, consisting of the reserve center and maintenance shop, was acquired from the town of Bristol in 1956. The reserve center was built into the south side of a hill adjacent to Colt State Park and the Poppasquash Farms National Register Historic District. The reserve center is bordered by woods to the north, the North Cemetery to the east and northeast, a paved bike path (former railbed) to the west, and open land to the south.

Environmental Setting

Topography and Physiographic Zone

The Quinta-Gamelin USARC lies within the Atlantic Seaboard Lowland region of the New England physiographic province. The geomorphic province of southeastern New England is known as the Atlantic Coastal Plain Province and characteristically exhibits a diversity of surficial and bedrock geology that represents an early and complex tectonic history (Cameron and Naylor 1976).

The topography of Rhode Island is predominantly the result of glacial activities that contributed to present-day landforms and drainage patterns. Recent man-made modifications to the landscape have also altered the terrain to some degree.

Bedrock, Surficial Geology, and Soils

Two types of bedrock underlie Bristol, dividing the peninsula into a northern and southern section (Quinn 1971). The northern portion, which includes the facility, is composed of Pennsylvanian age Rhode Island

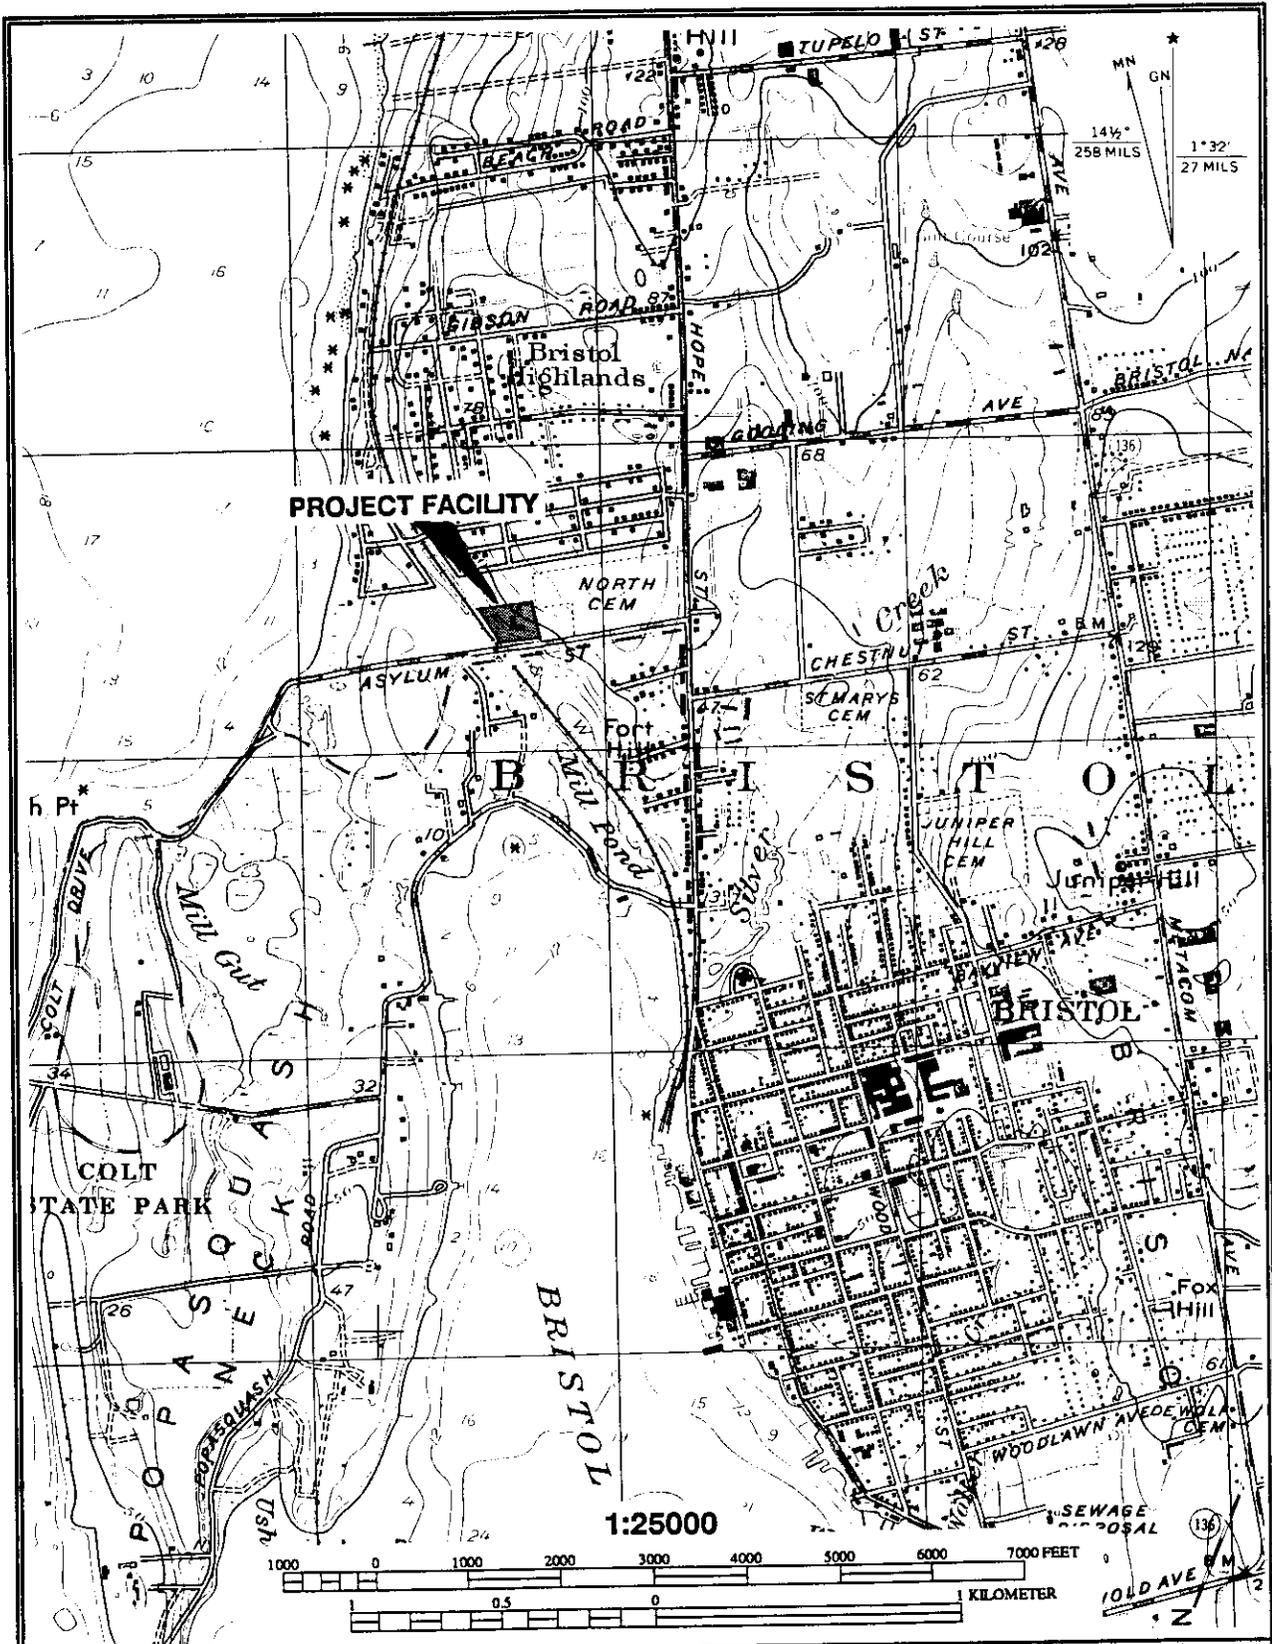

Figure 7-1. Location of the Quinta-Gamelin USARC (RI001) project facility on the Bristol, Rhode Island USGS topographical quadrangle, 7.5 minute series.

Formation sedimentary sandstone, shale, conglomerate, and meta-anthracite coal beds and is common around Narragansett Bay. Associated rocks are quartz-mica, schist, and feldspathic quartzite. Exposed outcrops are often filled with vein quartz. The southern half of Bristol consists of an older plutonic rock of Metacom Granite Gneiss. Overlying these bedrock formations are unconsolidated materials consisting mainly of unsorted glacial till and meltwater-sorted sand, gravel, and silt deposited by glacial activity during the Wisconsin Stage ca. 10,000 to 12,000 B.P. (USDA 1981b). These Narragansett till plains make up the area immediately around the southern and eastern portions of Narragansett Bay. The Narragansett till plains have few bedrock outcrops, and most of the landforms are drumoidal and have been smoothed by glacial action.

Soil formation is the result of physical and chemical processes acting upon parent geological materials (USDA 1981b). In Rhode Island, soils have developed over the past 10,000 to 15,000 years, since the retreat of the Wisconsin ice front. The majority of the facility soils are classified as Udorthents-Urban Land complex (USDA 1981b). These soils have been disturbed up to 2 ft by cutting or filling, or are covered by buildings and pavement. The soils in the northeast corner of the USARC grounds are classified as gently sloping (3 to 8 percent), well-drained Newport silty loams. Nearly level (0 to 3 percent slope), moderately well-drained Pittstown silty loams are found in the western portion of the facility. Poorly drained Stissing silty loams, characteristic of nearly level slope or depressions, are found in the southwest corner of the Bristol facility. Each of the three naturally occurring soils are formed on glacial upland hills and drumlins in southeast Rhode Island.

Narragansett Bay Drainage

The project facility is located within the Narragansett Bay drainage basin. Narragansett Bay and Rhode Island Sound lie along the southern coast of New England between Long Island, New York, and Cape Cod. The coastline is relatively low but irregular in this region and is characterized by numerous branching bays, salt water ponds and marshes, peninsulas, rugged headlands, islands, sea stacks, rocky shores, and sandy beaches (McMaster 1960). A number of streams in this region discharge into the Narragansett Bay system, including the Providence, Warren, Barrington, and Palmer rivers. The Palmer River drainage system is the principal water source supplying Bristol and the surrounding area. The town of Bristol occupies the southern end of a low-relief peninsula that is flanked on the west by Narragansett Bay and on the east by Mount Hope Bay. The project facility is situated approximately 656 yards east of Narragansett Bay and 602 yards north of Bristol Harbor.

Prehistoric Context

This section presents a general overview of the prehistoric cultural chronology and settlement/subsistence systems in Rhode Island for the past 12,000 years as defined by current archaeological research and the *Rhode Island Historic Preservation Plan* (RIHPC 1986). It also includes a description of local recorded sites that form the prehistoric context for the project facility in Bristol.

The prehistoric database for this section of eastern Rhode Island was compiled initially by avocational interest, and in more recent years by a large number of CRM surveys. The coastal sections of Narragansett Bay have also been the focal point of a number of academic studies. Information collected from all of these sources facilitates the construction of the prehistoric cultural chronology for the Bristol area.

Human activity in the Bristol area during the PaleoIndian Period has been documented through artifact finds, but no intact site areas have been identified to date. A single chert fluted projectile point was collected on the Noble Farm property near the Nayatt section of Barrington. In the Early Archaic Period, warmer post-glacial climatic conditions allowed mixed forest types containing pine and oak to spread into southern New England. Sites dating to this period have been found along major rivers, lakes, and swamps in the coastal plain region of Rhode Island and Massachusetts. Early Archaic artifacts have been identified on Prudence Island (Kerber and Ueki 1981), at the Burr's Hill Site in Warren (Ritchie 1980), and at the Read Farm Site (19-BR-66) in Swansea, Massachusetts. The Eastover Site (RI1739) on Aquidneck Island was occupied during the entire Archaic Period and contained a diagnostic Kirk type projectile point (Davin and Mowchan 1989). Bifurcate-base projectile points are also indicative of the Early Archaic Period.

The Middle Archaic Period is marked by the expansion of a mixed hardwood forest across the region. Human populations expanded in size, and sites dating to this period have been found in a wide variety of environmental settings. Middle Archaic Stark and Neville projectile points recovered at the Eastover Site show a preference for argillite and felsite in the area (Davin and Mowchan 1989).

Late Archaic sites are traditionally found in a variety of settings and reflect varying degrees and types of activities, from broad base to special purpose. Three cultural traditions, the Laurentian, Small Stemmed, and Susquehanna, have been identified within this period. Laurentian deposits are identified by Brewerton projectile points, which were recovered at RI 829 (Kerber and Ueki 1981). Squibnocket triangle points, indicative of the Small Stemmed Tradition, were also recovered at RI 829, as well as at RI 1-65 and RI 1898.

The Transitional Archaic Period, which corresponds to the Susquehanna Tradition, is well represented in area sites. This period is characterized by the use of steatite for bowls and other vessels, Susquehanna Broad and Orient Fishtail projectile points, cremation burials, and a preference for felsite as a lithic material. RI 1755 is a small site in Bristol that contained steatite bowl fragments, a cache of rhyolite bifaces, a charcoal feature with carbonized nut fragments, and a human bone fragment (Morenon 1988). The Blaeser Site (RI 297), located in Barrington, contained Orient Fishtail points, shell, and animal bone (RIHPC site files). This assemblage suggests that during this period people were hunting and fishing, as well as utilizing coastal resources.

The Woodland Period has been strongly associated with coastal adaptation, the use of clay for ceramics, the diversification of food sources, and the advent of horticulture. The Johannis Peninsula Site (RI 1716), located on the Palmer River, was occupied during the Early Woodland Period (3000-1600 B.P.), as suggested by diagnostic Vinette I type pottery (Mowchan 1987). The Weaver Cove Site (RI 1745) contained an Early Woodland Meadowood preform as well as later Woodland deposits.

Middle Woodland materials, including a jasper Jack's Reef projectile point, were collected at the Weaver Cove Site, and two chert Jack's Reef points are present in the Burr's Hill collection. Both these sites show the preference during this period for "exotic" lithics such as jasper from Pennsylvania and cherts from New York and Vermont.

Late Woodland Period occupations are also well represented in the Bristol area. Large, semi-permanent village-like settlements near the coast are indicative of this period. Levanna projectile points, agricultural tools such as hoes, decorated clay ceramics, and shell midden deposits, sometimes associated with human burials are diagnostic of the Late Woodland Period. Late Woodland components were identified at the Read Farm, Eastover, RI 1755, and Kickamuit Spring sites, as well as along the Sakonnet River and Mount Hope Bay. Most of these sites are associated to some degree with shellfish exploitation.

The sites located closest to the USARC project property do not contain much information on temporal affiliation. The Silver Spring Site (RI 1796), located approximately 0.5 mile east of the project area, contained a few pieces of quartz chipping debris. The Paddock Site (RI 1820) and RI 1926, located near Bristol Point a few miles to the southeast, contained low densities of quartz and felsite chipping debris, and no diagnostic tools or features.

Expected Prehistoric Resource

The highest density of sites in the northeast section of Narragansett Bay is located along Bristol Neck and Kickamuit Narrows (RIHPC 1981). Identified site types include multicomponent camp sites, shell middens, lithic workshops, burials, and village sites. Because prehistoric resources have been identified in the immediate project vicinity, it is likely that additional deposits could be located within the project property. Given the intensive use of the Bristol coastal area through most, if not all, of the prehistoric period, expected site types could include any of the types mentioned above.

Historic Context

During the early seventeenth century, the lands of present-day Rhode Island were divided between the Narragansetts and the Wampanoags, two rival Native American tribes of the Algonquin language group. The Narragansetts controlled the lands west of Narragansett Bay, while the Wampanoags claimed the lands to the east of the Bay. Massasoit, chief of the Wampanoags, controlled the land between Narragansett Bay and Massachusetts Bay. Mount Hope Neck in present-day Bristol, which was known to Europeans as the Mount Hope Lands, was the core of Wampanoag lands and the tribal seat. Other Wampanoag villages were located at Kickemuit, near Kickemuit spring; near the Bristol Narrow; and at Sowams, near the present day village of Warren (Rider 1904; Munro 1880).

One of the earliest visits to Bristol by English settlers dates to 1621 (Bicknell 1908). In an attempt to explore Pokanoket Country (interior Plymouth County), Edward Winslow and Stephen Hopkins followed trails

westward towards Narragansett Bay. After European and Native American contact was made, Massasoit began to sell lands to both the Plymouth and Massachusetts Bay colonies for their new towns. During this time, the Narragansetts were also expanding into Wampanoag territory and selling land to Rhode Island settlers. In an attempt to protect his tribe from the rival tribe, Massasoit sought an alliance with the English. During the 1640s and 1650, he sold a number of large tracts of land to Massachusetts Bay and Plymouth agents. Present-day Bristol and the Mount Hope area were exempt from all land transactions.

For a short time after Massasoit's death, the Wampanoags were ruled by his son, Wamsutta. Metacom (King Philip) became the leader upon Wamsutta's death in 1662 (Rider 1904). He discontinued the practice of selling land to the colonists. Communication between the Native Americans and the Europeans gradually became ambivalent and relations deteriorated over time. Tensions culminated in the outbreak of King Philip's War in June 1675. The fighting that had begun between Chief Metacom of the Wampanoag and the New England Confederation soon involved a number of other Native groups throughout the region (McLoughlin 1986). The Narragansett hoped for neutrality but were eventually drawn into the conflict. On December 19, 1675 the English slaughtered the Narragansett Indians and Wampanoag refugees at the Great Swamp Fight in present-day South Kingston. Metacom's forces absorbed surviving Native Americans and continued frontier warfare throughout New England. Secondary accounts of the war describe over 600 fatalities, the burning of many settlements, and the death of Metacom and his warriors at Cold Swamp in present-day Bristol (e.g., Munro 1880). Remaining Native Americans either were sold into slavery or fled to safety. The end of the war signaled a clear path to further development and the progressive formation of Rhode Island towns.

Both Rhode Island and Plymouth Colony claimed jurisdiction over the Mount Hope Lands after the death of Metacom (Rider 1904). In 1680 Mount Hope was granted to Plymouth Colony and did not officially become a part of Rhode Island until 1747. Plymouth sold territory as part of a 7,000-acre parcel "known by the name of Mount Hope Neck and Poppasquash Neck" to four Boston merchants for 1,100 pounds sterling (Munro 1880). Political and tax incentives were offered to Stephen Burton, Nathaniel Oliver, John Walley, and Nathaniel Byfield, if, as original proprietors, they could attract 60 families to establish permanent residence within one year. They were successful, and Bristol was incorporated as a town in 1681.

The town was laid out with the purpose of functioning as both an agricultural and shipping community. The design included 128 house lots, with waterfront land measuring 1 acre and all others 2 acres. Ten acres of farmland were sold in conjunction with each house lot. A total of 600 acres was kept for common use (e.g., town hall, cemetery, commons). Streets were planned in 8-acre squares. Outlying areas in the western, central, and northeastern sections of Bristol were divided into farms of approximately 100 acres. Seventy families were living in the town by 1690, and most of the farm lands had been claimed.

By 1693, fifteen vessels were registered to Bristol citizens, and a regularly scheduled market day was held to sell surplus produce. The harbor became the center of economic life as fishing and trading increased in importance. Narragansett Bay was at this time an important feeding ground for whales; when schools could be seen from shore, a party of whaling boats was sent out from Bristol Harbor (Howe 1959). The whaling

industry continued until the late eighteenth century, when Revolutionary War maritime military activity caused the whales to feed elsewhere, virtually ending the whaling industry within the Bay.

As an active seaport, Bristol was in a vulnerable position during the Revolutionary War. British and Hessian troops landed in Bristol in 1778 with the intention of destroying the shipyards at Kickemuit River and Bristol Harbor (Cirillo 1980). During this invasion, known locally as the "Burning of Bristol," enemy troops burned over 18 buildings, took prisoners, and stole valuables.

Within two decades after the Revolutionary War Bristol had regained its former status as a prosperous seaport. In 1800, Bristol's population was 1,678, and 42 sea vessels were registered to the townspeople. Items such as beef, pork, salt, fish, potatoes, cheese, flour, soap, candles, rum, and onions were exported from the harbor (Cirillo 1980). Businesses related to local rum distilleries encouraged town merchants and shipowners to become heavily involved in the West Indies triangle trade (Coleman 1969).

In the second half of the nineteenth century, the decline of a short-lived revival in the whaling industry and legislation affecting the triangle trade caused a sharp decline in Bristol's maritime economy (Howe 1959). Agriculture and ship-building became important industries during the same period. The Herreshoff Company, established in 1863, started making sailboats and yachts, then eventually specialized in steam engine and torpedo boats. Export farm products such as onions, carrots, rutabagas, turnips, and geese were sent to Boston and New York during the mid-nineteenth century (Russell 1982).

The lack of a major water source in Bristol prohibited industrial development until steam power became available (Coleman 1969). The first mills were concentrated along the harborfront in the late 1830s. Manufacturing industries, including cotton and wool textile mills, revived Bristol's economy. A sugar refinery, a rubber company, and a coal and lumberyard were established by the mid-nineteenth century. The construction of the Providence, Warren, and Bristol rail line in 1855 positively affected agriculture and industry by offering cheap, efficient overland transportation for freight and passengers (Figure 7-2). The railroad served 56 trading stores and 48 mechanical and manufacturing establishments in Bristol. Bristol also began to attract summer vacationers during the second half of the nineteenth century.

From the 1840s to mid-1900s, three separate waves of immigrants came to Bristol (Cirillo 1980). During this time, Bristol's population rose from 3,490 to 11,953. Irish immigrants, who were the first foreign-born group to settle in the area, found employment as mill workers, servants, and field hands. In the 1880s, a substantial Italian population settled near Wood Street and worked at the National Rubber Company, which had been relocated from the waterfront to a new inland site. A moderate number of Portuguese immigrants made up the last influx of foreign-born citizens to reside in Bristol.

With this significant increase in the population came improved public services. By 1903, the Bristol Gas Light Company was in operation and maintained a pump station (RI 1066) near Silver Creek (Morenon 1988). During this time, the town's primary economic base lay in manufacturing industries, and Bristol was no longer a port of entry. The necessity for land transportation between Aquidneck Island and Bristol became evident, and the Mount Hope Bridge was built by 1929.

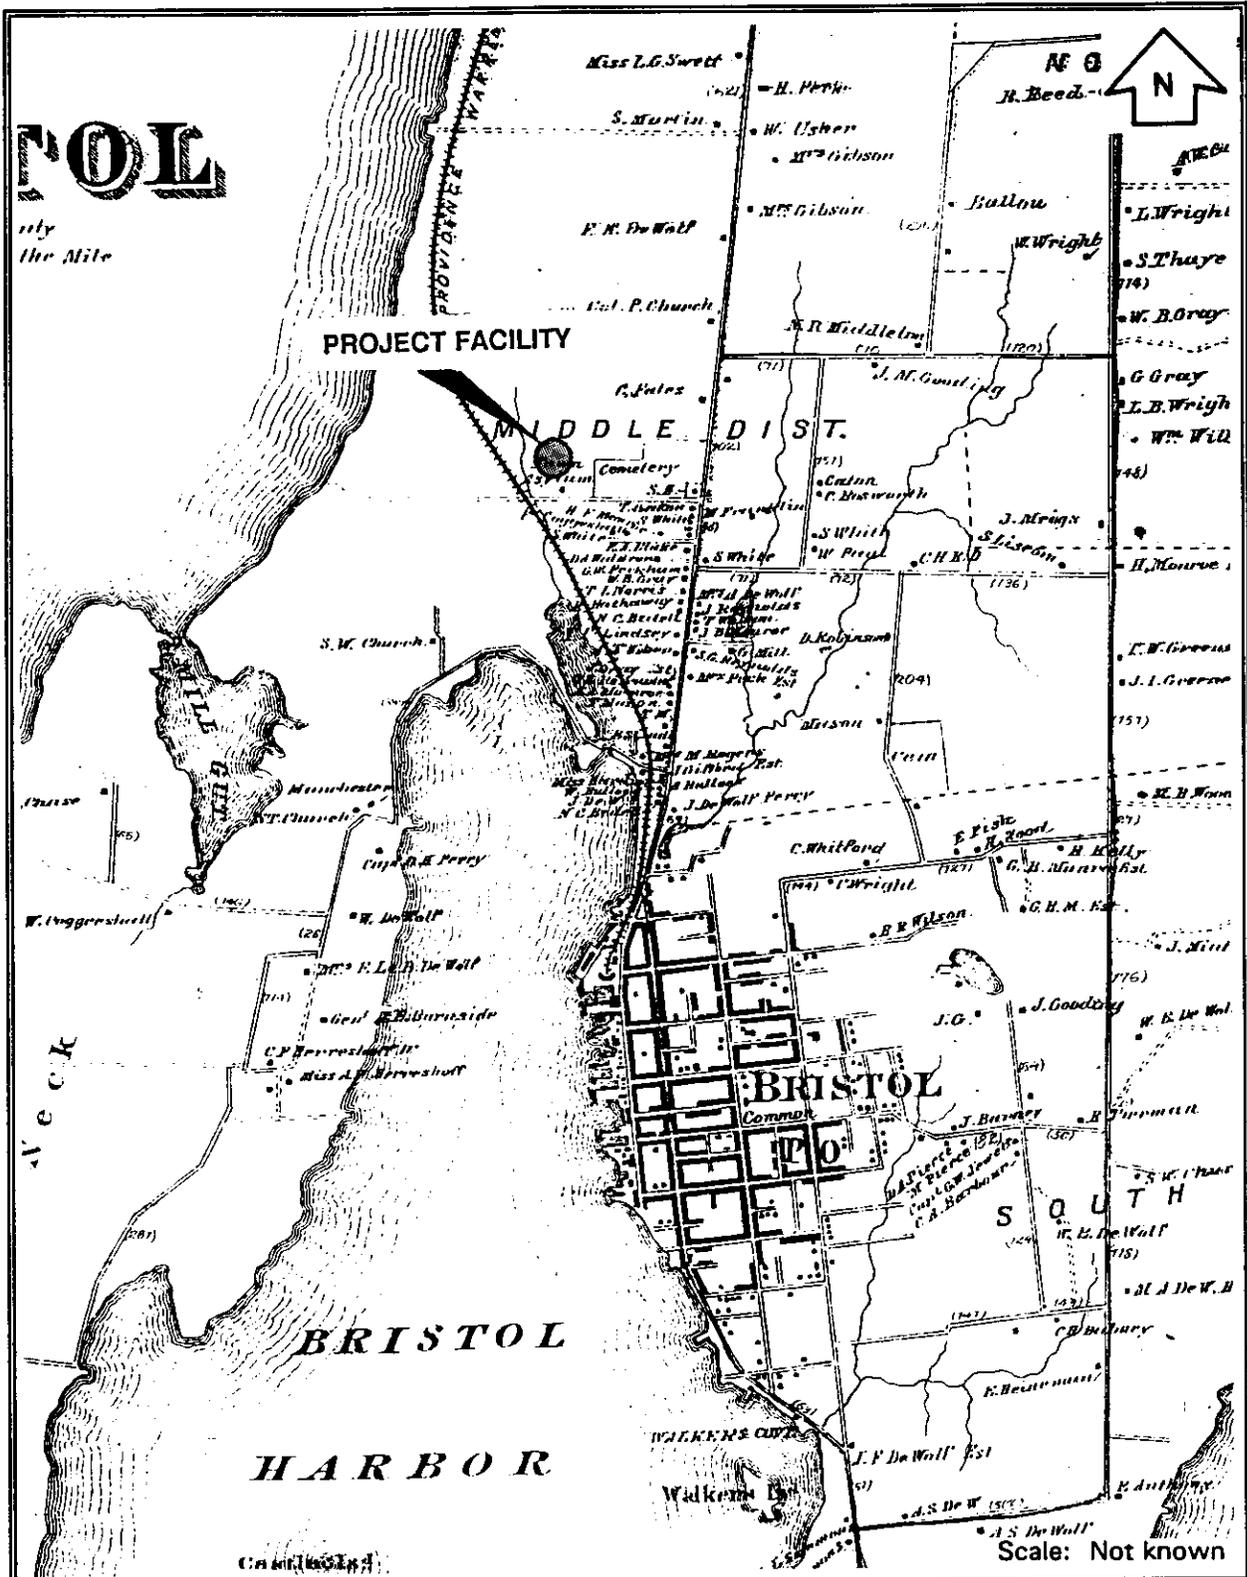

Figure 7-2. 1870 map of Bristol, Rhode Island with the location of the Quinta-Gamelin USARC (R1001) project facility (source: Beers 1870c).

During the second half of the twentieth century, Bristol has become a suburban town associated with the large metropolitan area center of Providence. In 1985, Bristol's population was 20,100 (Rhode Island Department of Economic Development 1987). Almost half of the workforce continues to be associated with manufacturing industries as either machine operators or assemblers. Recreation and summer tourism are also very much a part of Bristol's economy. Both the Poppasquash Farms Historic District and the Bristol Waterfront Historic District are listed in the National and State Registers of Historic Places.

Expected Historic Resources

A review of nineteenth-century maps of Bristol did not reveal the presence of land improvements or structures within the facility boundaries (Walling 1855; Beers 1870c; Sampson 1883; Everts and Richards 1895b). However, given the early historic settlement and network of regional and local trails, the facility has the potential to contain under-documented Native American or Colonial sites dating to the seventeenth and eighteenth centuries. The presence and integrity of any under-documented historic resources within the Bristol facility is dependent upon the degree of previous disturbance related to facility construction and associated earthmoving activity.

Results of Previous Archaeological Studies

The 1979 archaeological survey of the Quinta-Gamelin USARC property reported that the facility was totally disturbed (Hammer 1983). An intensive archaeological survey of the parcel was not recommended.

Results of Validation Survey

The validation survey included a walkover of the Quinta-Gamelin facility to reassess the previous determination of low sensitivity and recommendation for no further work. A total of ten shovel turnovers was used to verify the presence of disturbed soils (Figure 7-3). Four profiles (1, 5, 6, and 10) revealed disturbed fill soils related to the leveling of the slope and underground utilities/drains (see Appendix B). Four profiles (2, 3, 4, and 7) revealed intact soils. The remaining two profiles (8 and 9) revealed very deep topsoils that may be the result of slope wash or filling.

Based on the 1956 survey map, the 1958 facility plan, and shovel turnovers, it was determined that a large portion of the natural sloping topography of the facility had been disturbed as a result of machine grading and filling to create the artificial terrace of the reserve center. The natural wetland that had existed in the southwest corner of the property has been altered as a result of earthmoving and the placement of storm drains that now feed into the wetland. It was determined, however, that the northeast corner and possibly the southern fenceline contained intact soils (see Figure 7-3). Two quartz flakes were surface collected at the base of a stone wall that runs parallel to Asylum Road south of the reserve center (see Appendix A).

Conclusion/Recommendation

Due to the recovery of the quartz flakes, the proximity of Narragansett Bay, and the presence of prehistoric sites in the immediate vicinity (RI 1796, 1820, and 1926), potentially undisturbed sections of the Quinta-Gamelin USARC property possess a moderate to high archaeological sensitivity for containing prehistoric deposits (see Figure 7-3). The remainder of the facility, due to the degree of previous disturbance, steep slope, and wetlands, possesses a low archaeological sensitivity for intact cultural resources. An intensive archaeological survey of the areas having moderate to high sensitivity is recommended. This area encompasses an estimated 22,600 sq ft (2100 sq m).

1.0 INTRODUCTION

The Clean Water Act of 1987 [40 Code of Federal Regulations (CFR) 122] requires Federal installations that discharge stormwater whose quality may be affected by industrial activities to implement plans to control the quality of stormwater discharges. This "*Stormwater-Pollution Prevention Plan*" (SWP3) was developed in response to these requirements. The plan identifies sources of potential pollution, describes "*Best Management Practices*" (BMPs) designed to minimize pollution through prevention and source control, and recommends actions for this facility. The SWP3 also discusses stormwater-runoff drainage, identifies point-source outfalls into local surface waters, and provides non-stormwater discharge certification of stormwater outfalls.

1.1 FACILITY PERMIT

The State of Rhode Island, in which this facility is located, has National Pollutant Discharge Elimination System (NPDES) permitting authority. Stormwater permitting in the State is administered by the Rhode Island Department of Environmental Management (RIDEM), Office of Water Resources, Providence, Rhode Island (Stormwater Permit Manual, Thompson Publishing Group, Inc., written commun., January 1995). The RIDEM representative is Eric Beck (401) 222-6820, ext. 7202.

As of December 8, 1999, the U.S. Environmental Protection Agency's (USEPA's) final Phase II stormwater rule allows for a "No-exposure" exemption for facilities that have no discharge of stormwater contaminated by exposure to industrial activities. For more information about Phase II, see USEPA 64 FR 68721 and call the RIDEM representative. The RIDEM is required to publish Phase II regulations by December 8, 2000, and may offer the "No-exposure" exemption 90 days after this date.

1.2 FACILITY DESCRIPTION

The Quinta-Gamelin U.S. Army Reserve Center (USARC) and Organizational Maintenance Shop (OMS) are on Asylum Road in Bristol, Rhode Island (*PLATES 1, 2, 3*). The facility encompasses about 5.17 acres at an elevation of about 60 feet above the National Geodetic Vertical Datum of 1929 (figure 1.2). Geographic coordinates for the OMS are latitude 41°41'18" North and longitude 71°17'11" West.

The 2nd Simulation Exercise Group currently is stationed at the Quinta-Gamelin USARC. The primary mission of the unit is to evaluate command, staff-combat, and medical units using computer-generated programs. Vehicle maintenance currently is not performed at the facility. Military vehicles are not stored on the property.

1.3 PLAN DEVELOPMENT

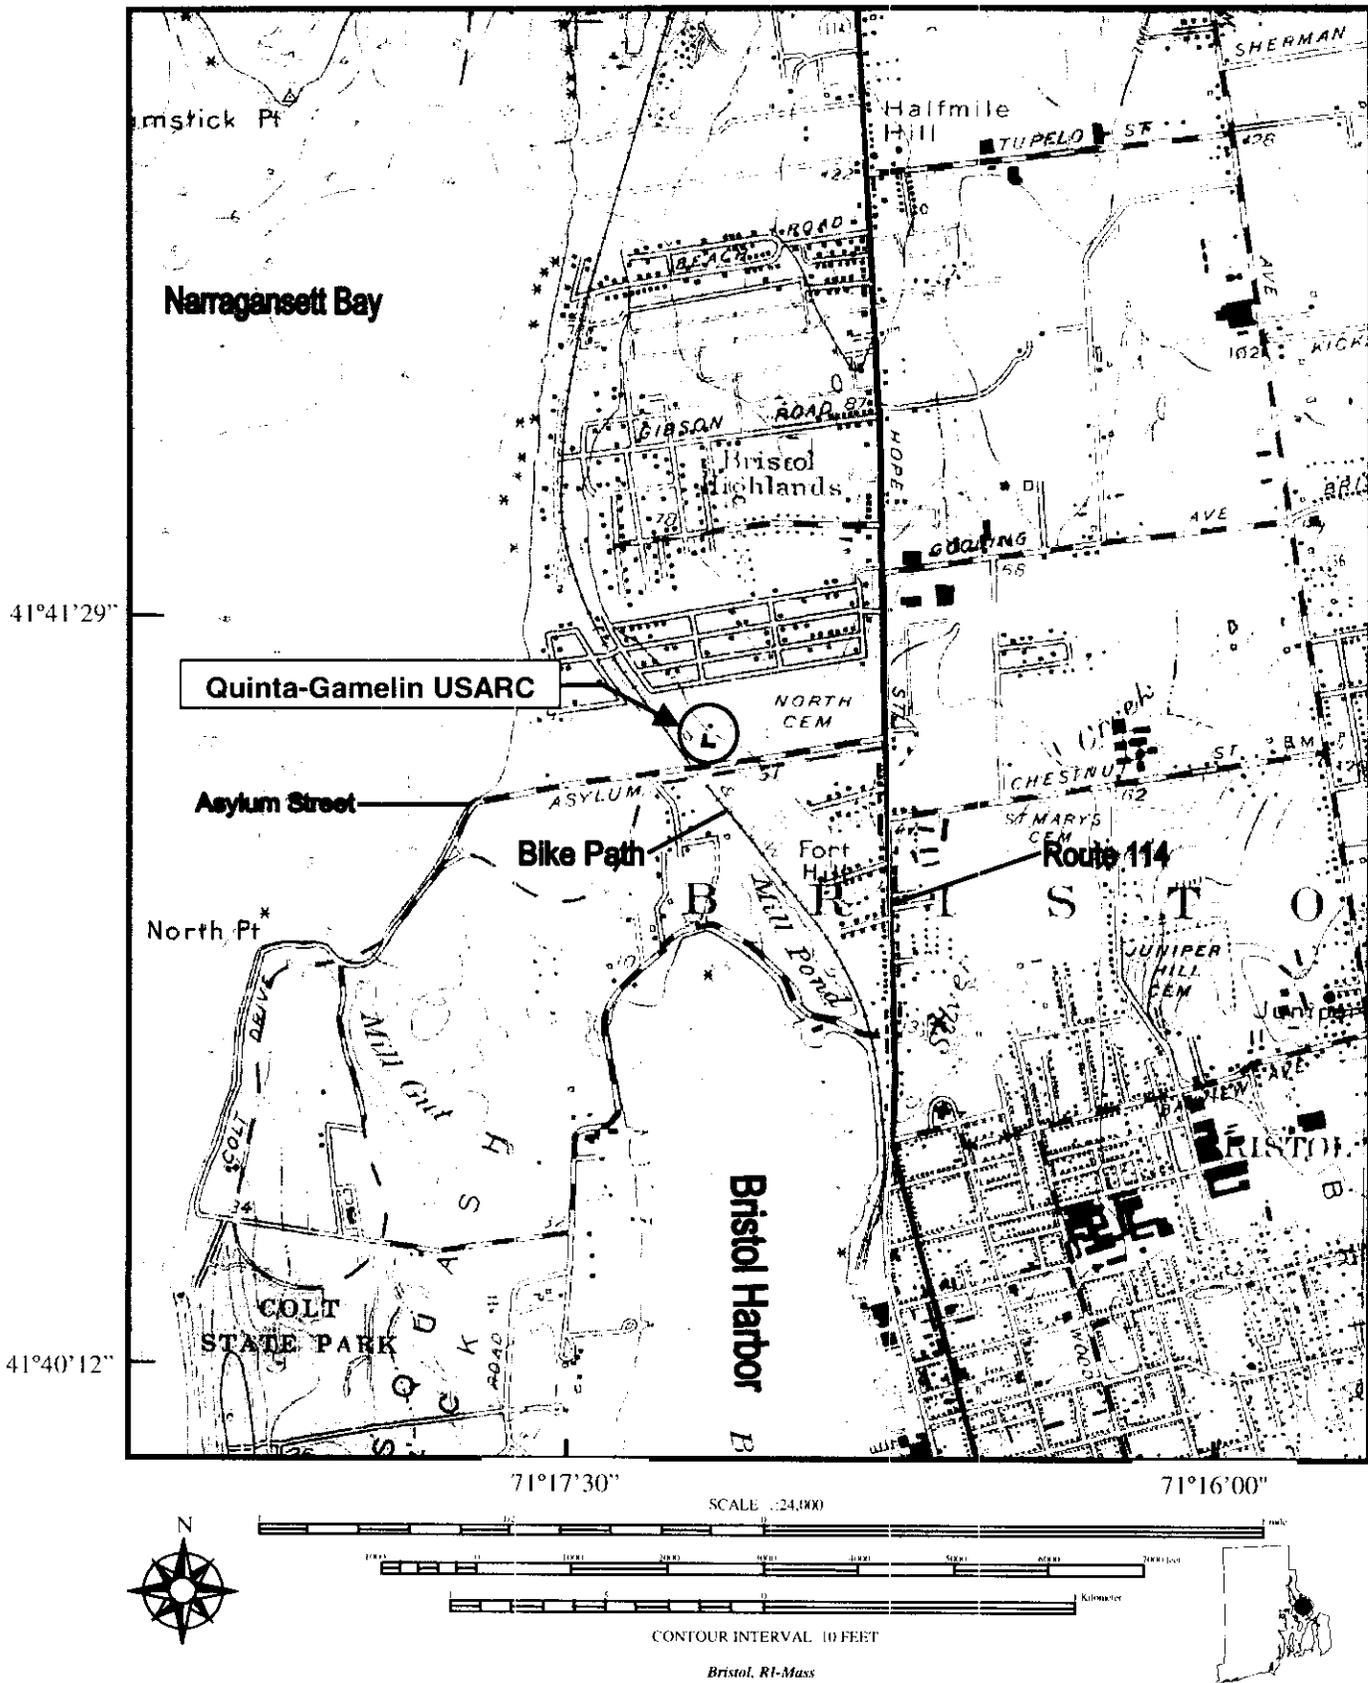

The U.S. Geological Survey (USGS), Water Resources Division, drafted this plan. Information and illustrations included in the plan were developed from site inspections and from the 94th Regional Support Command (RSC) and USGS databases.

1.0 Introduction-Continued**1.4 PLAN REVISIONS**

The SWP3 should be updated annually or more often, if required. Many elements of the plan are presented in maps and tables describing (1) sites where potential pollution of stormwater might occur, (2) stormwater-pollution risks from those sites to surface waters of the State, and (3) BMPs that prevent or control stormwater pollution. Detailed notes and sketches should be made during periodic stormwater inspections to facilitate the annual plan revision.

1.0 Introduction-Continued

Figure 1.2--Location Map (source: USGS).

2.0 POLLUTION-PREVENTION TEAM [RIPDES.IV.E.2.a]

The Pollution-Prevention Team (PPT) is responsible for implementing and evaluating the effectiveness of the SWP3 at this facility. Personnel should officially be appointed to the team. Table 2.0 lists the members of the PPT and shows their respective duties. Additional members may be appointed to the PPT as needed.

Table 2.0—Pollution-Prevention Team Members and Duties.

Team member	Duties
94 th Regional Support Command - Chief Environmental Division (978) 796-2238	<ul style="list-style-type: none"> • Reviews and approves the SWP3 and any modifications or updates to the plan in coordination with State and Federal regulators. • Provides guidance and information as requested. • Performs annual site compliance inspection.
Regional Facility Manager – Rhode Island (401) 253-0451	<ul style="list-style-type: none"> • Reviews and approves the SWP3 and any modifications or updates to the plan.
Quinta-Gamelin USARC Facility Coordinator (401) 253-3150	<ul style="list-style-type: none"> • Implements the stormwater-pollution prevention program at the facility. • Schedules meetings of the PPT. • Signs documents and certificates required in the SWP3. • Prepares cost estimates for implementation plans for advanced and baseline BMPs at the facility. • Submits requisitions and work orders and promotes self-help initiatives. • Conducts monthly stormwater inspections and files inspection reports. • Serves as official emergency-response spill coordinator for the facility. • Inspects hazardous material and waste-storage areas, updates records on those areas, monitors waste generation, and monitors the transfer of such materials among units. • Informs Commanding Officer and 94th RSC of problems and equipment and training needs.

3.0 ASSESSMENT [RIPDES.IV.E.1]

As required by the RIDEM General Permit, the site assessment includes a description of potential sources of pollutants that may affect stormwater discharges or which may cause the discharge of pollutants from the facility during dry weather. All activities and materials that may be potential pollutant sources are identified. Pollutant sources are referenced to stormwater outfalls to aid in conducting the risk assessment, implementing BMPs, and updating the SWP3.

3.1 SITE MAP [RIPDES.IV.E.1.a]

The RIDEM stormwater regulations require that a facility site map be developed as part of the SWP3. Required elements of the map include locations of industrial activities, stormwater structures, and the directions of stormwater runoff. The site map (figure 3.1) shows primary stormwater-drainage directions, outfalls, and the location of buildings and facilities. Stormwater-control structures, pollutant sources, and areas at high risk for pollution are labeled with site map codes.

3.2 DRAINAGE [RIPDES.IV. E.1.a]

Site observation of the Quinta-Garnelin USARC property identified no stormwater outfalls (figure 3.1) that could be subject to USEPA stormwater regulations. Two unregulated outfalls (OF-1 and OF-2) were identified on the property. A third outfall (OF-3) currently is not functioning but has the potential to become an unregulated outfall after some work is done to the facility storm-sewer system.

OF-1 is a low-lying area under the security fence northwest of the OMS (*PLATE 21*). OF-1 drains a portion of the grass area northwest of the OMS (*PLATE 22*). No regulated activities occur within the drainage area of OF-1. Runoff flowing under the fence at OF-1 enters a large grass area outside the security fence, still within the property line, where it either infiltrates the ground or evaporates. Under some conditions runoff may be directed southwest toward a pond near the western property line.

OF-2 is a culvert pipe outlet in the woods west of the USARC (*PLATE 23*). The easiest access to this outfall is from the East Bay Bike Path (*PLATE 26*) that crosses Asylum Road near the western property line. OF-2 drains the privately owned vehicle (POV) parking area east of the USARC (*PLATE 19*), the drive-through area between the OMS and the USARC, and the GSA parking area west of the USARC (*PLATE 20*). There currently are no regulated activities within the drainage area of OF-2. Runoff flowing through OF-2 is directed into a pond near the western property line (*PLATES 24, 25*). Two locations were observed where the pond has the potential to flow into a gravel drainage swale east of the bike path during extremely wet conditions (*PLATES 27, 28*). The drainage swale can be seen in plates 26 and 27. Runoff entering the drainage swale is directed south along the bike path into a storm-sewer system on Asylum Road. The storm-sewer system directs runoff into an open channel south of Asylum Road. Runoff in the open channel is directed into Mill Pond and continues to flow south into the Bristol Harbor. During most storms runoff from OF-2 enters the pond and does not travel to Bristol Harbor. Runoff in the gravel drainage swale typically infiltrates the ground or evaporates.

Forty-five feet on either side of the East Bay Bike Path is the property of Colt State Park, according to the Park Manager. The pond is thought to be on the property of both the Quinta-Gamelin USARC and Colt State Park depending the amount of water in storage at a particular time.

3.0 Assessment-Continued

OF-3 is a culvert pipe outlet in the grass median between the westbound and eastbound lanes of Asylum Road (*PLATE 29*). The drainage pathway from OF-3 down the grass median toward the lowest point near the bike path crossing can be seen in plate 30. OF-3 currently is not functioning because of problems with the storm-sewer system on the eastern side of the facility. The storm drain near the corner of Asylum Road and the facility entrance (*site 12, PLATE 16*) is scheduled to have the debris removed, according to the Facility Manager. A storm drain near the northeastern corner of the facility access road was observed on an As-built drawing (*site 11, PLATE 15*). Field observation shows that it is completely buried under mud and grass. It is recommended that this storm drain be found using a metal detector. Once found, it is recommended that the storm drain be cleaned and the storm-sewer pipe connecting this drain to OF-3 be cleaned if necessary. After the cleaning, OF-3 will drain the grass area east of the OMS that currently ranges from very damp to standing water depending on weather and soil conditions. Stormwater runoff from the access road and the grass area east of the access road are included in the drainage area of OF-3. There are no regulated activities that occur within the drainage area of OF-3. Stormwater runoff leaving the facility through OF-3 is directed into the grass median on Asylum Road and flows downhill toward the bike path crossing. Runoff then enters the storm-sewer system that directs it into the open channel that flows into Mill Pond and then the Bristol Harbor.

3.0 Assessment–Continued

3.3 STRUCTURES [RIPDES.IV. E.1.a]

There are two storm-sewer systems at the Quinta-Gamelin USARC. One system drains most of the paved areas at the facility and includes roof drainage from the USARC. The second system east of the access road currently is not functioning. There are plans to get this system operational, according to the Facility Manager. A floor drain was observed in the USARC boiler room (*PLATE 9*). Condensation from the air conditioning unit and water from one of two hot water heaters enters this drain and is directed into the storm-sewer system that leads to OF-2.

The facility has a 5,000-gallon septic tank (**site 13**, *PLATE 17*) leading to a distribution box and leach field (**site 14**, *PLATE 18*). The As-built drawings showed that the leach field at site 14 was connected to the existing leach field during the project to expand the USARC building.

3.4 POTENTIALLY POLLUTING MATERIALS [RIPDES.IV.E.1.d]

Exposed potentially polluting materials (PPMs) include any hazardous materials that are exposed to precipitation and/or stormwater runoff (i.e., during storage, active use, or loading/unloading). A lack of cover and containment during loading/unloading or storage of PPMs commonly results in exposure to stormwater runoff. If vehicle maintenance is performed at this facility in the future, maintenance personnel should maintain an inventory tracking system for PPMs. An electronic copy of the PPM inventory, in spreadsheet format, is provided to facilities where vehicle maintenance is being performed as part of the stormwater assessment. The inventory must be continuously updated and include the locations of materials and approximate quantities on hand.

3.5 POTENTIAL SOURCES OF POLLUTANTS [RIPDES.IV. E.1.d]

An inventory of areas at Quinta-Gamelin USARC where industrial activities could potentially pollute stormwater runoff was compiled from facility plans, staff interviews, and field reconnaissance. Industrial activities such as vehicle fueling and maintenance are not conducted at this facility. Therefore, associated activities such as loading and unloading of PPMs and the generation of waste products as a result of vehicle maintenance are not a concern at this time.

The OMS is not considered to be a hazardous-waste generator by the USEPA and has not been issued a generation number. A small flammables storage cabinet, recently purchased, was observed in the boiler room (*PLATE 10*). The cabinet will be moved to the supply room and used to store windshield washer fluid for GSA vehicles and other chemicals as needed.

The facility is heated by propane gas, so no PPMs are stored at the facility to heat the OMS or USARC. Two propane tanks used to heat the buildings at this facility are east of the OMS (**site 3**, *PLATE 13*). Two underground-storage tanks (USTs), formerly used to store fuel oil for heating the facility, will be removed in the summer of 2000. A 1,000-gallon UST is located north of the OMS (**site 2**, *PLATE 12*). A 3,000-gallon UST is located east of the USARC (**site 10**, *PLATE 14*). Both USTs have had excess fuel removed from the tanks, according to the Facility Manager.

3.6 SIGNIFICANT SPILLS AND LEAKS [RIPDES.IV.E.1.e]

There have not been any significant (reportable) spills or leaks during the last 3 years at the Quinta-Gamelin USARC, according to the Facility Coordinator.

3.0 Assessment-Continued

3.7 NON-STORMWATER DISCHARGES [RIPDES.IV.E.1.i & 2.k]

Unauthorized connections discharging pollutants to stormwater runoff or inappropriate management practices result in non-stormwater discharges (NSWDs) to storm-sewer systems, open drainage ditches, and outfalls. Sources of unauthorized NSWDs must be identified and permitted, or eliminated, except for flows in compliance with a Rhode Island Pollutant Discharge Elimination System (RIPDES) permit. Stormwater-pollution prevention measures should be adopted and implemented, where necessary, to minimize pollutants in these discharges.

There are no regulated outfalls that require certification at the Quinta-Gamelin USARC. The three unregulated outfalls did not have a NSWD on May 16, 2000. A NSWD certification is provided in the Appendix (table 6.0). The Facility Coordinator must sign the certification (RIPDES.V.F).

3.8 STORMWATER-MONITORING DATA [RIPDES.IV.E.1.b]

Stormwater sampling has not occurred at this facility, according to the Facility Manager. Sampling of stormwater, if required, should be conducted at regulated outfalls as mandated by the USEPA. Stormwater sampling and analysis must be performed by qualified individuals adhering to a specific quality-assurance/quality-control program. Stormwater monitoring currently is not required for vehicle-maintenance activities in USEPA-regulated states and most states with NPDES permitting authority, like Rhode Island.

3.9 RISK SUMMARY [RIPDES.IV.E.2.b]

An initial assessment of areas at the Quinta-Gamelin USARC with a potential for pollution from stormwater runoff has been prepared as part of the SWP3. The assessment should be considered a "snapshot" in time and must be updated annually or more often, as necessary. The following narratives summarize conditions observed during the December 7 and 8, 1999, site assessment. An additional site visit was conducted on May 16, 2000. Sites identified as having a potential for stormwater pollution are summarized in table 3.9. Locations of these sites are shown in figure 3.1.

BUILDINGS AT THE FACILITY

The OMS has been remodeled into a training and storage area. Bay 1 currently is used as storage area (**site 4, PLATE 4**). No PPMs were observed in the area designated as storage area. Bay 2 currently is a classroom (**site 5, PLATE 5**).

The USARC has a maintenance bay in the northern end of the building. This maintenance bay has also been remodeled and contains a classroom (**site 9, PLATE 6**). A spill kit was observed in the northwestern corner of the USARC (**site 8**). A floor drain was observed in the boiler room. Condensation from the air conditioning unit and water from one of two hot water heaters may enter this drain and is directed into the storm-sewer system that leads to OF-2. A rolling spill kit (**site 7, PLATE 8**) and a container of Speedy Dry® (**site 6, PLATE 7**) were observed in the boiler room during the assessment.

The OMS and USARC currently pose no risk to surface waters of the State of Rhode Island. A storm drain is located downhill from the door to bay 2 in the OMS. Preventing spills from entering this storm drain should be a priority if vehicle maintenance is performed at this facility in the future.

3.0 Assessment-Continued

PAVED PARKING AREAS

The asphalt parking area east of the USARC is used for POVs (*PLATE 19*). The parking area west of the USARC currently is used for parking GSA vehicles (*PLATE 20*). Both of these parking areas direct stormwater runoff into a storm-sewer system that leads to OF-2. The GSA parking area was formerly used for parking military vehicles, according to the Facility Coordinator. If the GSA parking area is used for storing military vehicles in the future, protecting storm drains in this area from potential leaks should be a priority. OF-2 will become a regulated outfall if the GSA parking area is used as a military equipment park (MEP).

VEHICLE-WASH RACK

The drainage pathway from the vehicle-wash rack (*site 1, PLATE 11*) was not detailed on any of the As-built drawings available at the facility. No outlet pipe was observed in the wash rack catch basin during the site inspection. Standing water and debris were observed in the bottom of the catch basin. It is recommended that the catch basin be cleaned before the wash rack is used so that the drainage pathway can be verified. Wash water from a vehicle-wash rack must pass through an oil/water separator into the sanitary-sewer system to be in compliance.

There currently is no risk to surface waters of the State of Rhode Island from the vehicle-wash rack because it is not being used. The risk to surface water if the wash rack is reopened for use is unknown because the drainage pathway has not been confirmed.

3.0 Assessment-Continued

Table 3.9—Risk summary.

Site ID	Location	Relevant Activity	Potentially Released Substance	Outfall/Receiving Water	Exposure	Rating
1	West of OMS	Vehicle washing (if used)	POL residue	Needs to be verified before use	G	No risk/c, g
2	North of OMS	POL storage, unloading	Fuel oil	None/Groundwater	E	No risk/g, h
10	East of USARC	POL storage, unloading	Fuel oil	None/Groundwater	E	No risk/g, h

¹ Exposure type:

- A No exposure to precipitation or stormwater runoff.
- B Direct exposure to precipitation due to lack of covering during storage.
- C Direct exposure to stormwater runoff due to lack of containment during storage.
- D Some indirect exposure to precipitation due to wash rack drainage system.
- E Direct exposure to precipitation and runoff due to spills/leaks during material transfer.
- F Direct exposure of wash rack drainage system to storm runoff due to lack of berming.
- G Direct exposure of wash rack to precipitation due to lack of covering.
- H Direct exposure to precipitation and stormwater runoff due to undetected leak during temporary storage.

² Rating/Reason key:

- a Lack of preventive maintenance and visual inspection program.
- b Lack of containment, allowing exposure to stormwater runoff.
- c Lack of covering, allowing exposure to precipitation.
- d Lack of employee training and/or awareness.
- e Lack of spill kits, drip pans, sorbant, and/or other spill equipment.
- f Proximity to storm-drain inlet or other conveyance.
- g Not a point-source discharge to surface waters of the State.
- h Potential for spills/leaks into exposed areas during material transfer.

4.0 BEST MANAGEMENT PRACTICES PLAN [RIPDES.IV.A]

Best Management Practices are measures and controls that can reduce potential stormwater pollution from industrial-activity pollutant sources. These BMPs are classified as "*baseline*" or "*advanced*" and they may be either inexpensive or costly to implement. Baseline BMPs include inspection programs and a contingency plan that attempts to identify and eliminate conditions and practices that could cause stormwater pollution. Advanced BMPs are techniques, equipment, or structures that eliminate contact between stormwater runoff and PPMs.

In the following sections, foundations are established for a BMPs program at the Quinta-Gamelin USARC. Most of these sections do not apply to the Quinta-Gamelin USARC because vehicle maintenance is not performed at this facility. These sections can be used for future reference or if the status of the facility changes. Baseline and advanced BMPs necessary for the implementation of the facility stormwater program are discussed and listed in table 4.0. The stormwater-inspection checklist (table 5.1b) should be used to monitor potential problems and to select BMPs.

4.1 BASELINE BEST MANAGEMENT PRACTICES

Baseline BMPs are relatively simple inspection programs and contingency plans that are implemented at a facility. The Facility Coordinator will perform monthly stormwater inspections. The 94th RSC is responsible for updating the spill plan, ensuring that Quinta-Gamelin USARC personnel receive environmental training, and conducting an annual compliance inspection of the facility. The following baseline programs are discussed briefly in this chapter and are included in the stormwater-inspection checklist provided in table 5.1b.

4.1.1 Good Housekeeping [RIPDES.IV.E.2.d]

Good housekeeping addresses cleanliness and orderliness of work and storage areas. Practicality guides the appropriate implementation of good-housekeeping practices.

4.1.2 Preventive Maintenance [RIPDES.IV.E.2.c]

Preventive maintenance involves an inspection of all vehicles and equipment for conditions that could lead to leaks or spills of PPMs. A technical inspection for fluid leaks or drips should be done for all incoming military vehicles and equipment. Military vehicles and equipment stored at the facility should be inspected daily for fluid leaks and drips. Maintenance equipment, oil/water separators (when present), storage tanks and drums, pipes, and pumps should be included in the technical inspection.

4.1.3 Spill Prevention and Response [RIPDES.IV.E.2.e]

The facility spill plan should be reviewed and revised by the 94th RSC for the Quinta-Gamelin USARC. The Facility Coordinator has the responsibility to serve as emergency-response spill coordinator in the event of a spill or leak. The Facility Coordinator should designate an alternate emergency coordinator when he/she is not present. The Facility Coordinator (or alternate) has the responsibility to ensure the spill is immediately contained, proper spill reporting procedures are followed, and the 94th RSC is immediately informed.

4.0 Best Management Practices Plan-Continued

4.1.4 Visual Inspections [RIPDES.IV.E.2.i]

A formal visual-inspection program is used to ensure that good housekeeping and preventive maintenance are actively practiced, and that a spill plan and spill-containment equipment are readily available at the facility. The Facility Coordinator should conduct a monthly visual inspection of the motor pool using the stormwater-inspection checklist. The 94th RSC should perform annual compliance inspections using the stormwater-inspection checklist.

4.1.5 Sediment and Erosion Control [RIPDES.IV.E.2.g]

The RIDEM General Permit requires identification of areas having a high potential for significant soil erosion and selection of measures (BMPs) to mitigate soil loss. Significant soil erosion was not observed at this facility.

4.1.6 Environmental Training [RIPDES.IV.E.2.h]

Headquarters, U.S. Army Reserve Command, has developed a video-based stormwater-training package. Annual stormwater training is mandated by Deputy Chief of Staff, Operations (Training Division) [DCSOPS (T)] for all reservists assigned to a facility with a stormwater permit. All civilian personnel who work within regulated areas also are required to attend this training. The training, using several videos supplied by the U.S. Army Reserve Command, can be implemented in two or more sessions during the year.

4.2 ADVANCED BEST MANAGEMENT PRACTICES

Advanced BMPs are techniques, equipment, structures, or construction practices that prevent hazardous materials or wastes from reaching the environment in stormwater runoff. All Army Reserve maintenance facilities employ advanced BMPs. Implementation of new advanced BMPs or maintenance and upkeep of existing advanced BMPs usually requires requisitions, work orders, or self-help initiatives. Identification, implementation, and upkeep of advanced BMPs involves communication among the Facility Coordinator, senior officers, and 94th RSC staff. The Facility Coordinator has the responsibility to work with unit, and 94th RSC personnel to identify necessary advanced BMPs and provide proper maintenance and upkeep for existing advanced BMPs. Also, the Facility Coordinator has the responsibility to inform senior officers of advanced BMP needs, and to submit and follow up on requisitions and work orders for those BMPs selected.

Table 4.0 details the status of the BMP program at the facility. Baseline and advanced BMPs can be prioritized according to need and scheduled by the PPT. "Recommended" BMPs in table 4.0 should be endorsed by the PPT as goals for 2001. The Facility Coordinator should initial and date the block indicating that the recommended BMP is accepted and is being implemented.

4.0 Best Management Practices Plan-Continued

Table 4.0—Best Management Practices.

Description	BMP Type		Responsible Party		Implementation	
	GH	PM	USARC	MELIN	Start Date	Completion Date
Keep work areas and outside areas clean, free of easily spilled materials, and free of sediment and loose soil	GH		X			
Ensure that maintenance buildings and storage buildings are in good condition	GH		X			
Clean spilled materials with dry sweep or rags, not with water	GH		X			
Post good-housekeeping visual aids at the facility	GH			X		
Formally train military and civilian maintenance personnel in good-housekeeping practices	GH/TG			X		
Ensure that updated spill plan, emergency coordinator, and spill equipment are available at the facility during working hours	SPR			X		
In the event of a significant spill or leak during off-duty hours, the designated spill coordinator should refer to the spill plan	SPR			X		
Provide formal training in emergency spill response to all military and civilian maintenance personnel	SPR/TG			X		
Conduct a monthly visual inspection of the facility using the stormwater-inspection checklist. Sign, date, and retain with SWP3	VI			X		
Identify conditions that could cause stormwater pollution and report potential problems to the 94 th RSC	VI			X		
Perform an annual stormwater-compliance inspection	VI			X		
Provide stormwater training for all military and civilian maintenance personnel	TG			X

5.0 IMPLEMENTATION [RIPDES.V.A]

This section establishes inspection and record-keeping programs that will bring the facility into compliance. Included in this chapter are a guide for implementing a stormwater program, a stormwater-log sheet for record keeping, a stormwater-inspection checklist to be used when performing monthly and annual stormwater inspections, and an annual compliance schedule. Table 5.0 presents key elements required to implement and evaluate the stormwater-management program, and includes columns for approval and scheduling of such activities by senior officials.

Table 5.0–Key elements to implement and evaluate the stormwater-management program.

Elements to implement stormwater-management program	By	Date
Assign top priority to: (1) correcting problems identified during the initial site assessment; and (2) establishing a stormwater-inspection and personnel-training program.		
Record significant stormwater-management activities on the stormwater-log sheet.		
The Facility Coordinator will perform monthly inspections. If the Facility Coordinator cannot correct the problem, recommendations for corrective actions will be made to the 94 th RSC.		
Monthly inspection checklists will be reviewed, signed, and dated by the Facility Coordinator, and filed for future reference by compliance inspectors.		
Periodic stormwater-inspection reviews will be performed by the 94 th RSC. Recommended corrective actions and employee training needs should be discussed.		
The Facility Coordinator should discuss equipment, construction, and training needs with senior officers and the 94 th RSC. The Facility Coordinator should submit requisitions and work orders through proper channels.		
Employee training should be conducted.		
Advanced BMPs should be implemented.		
Personnel from the 94th RSC will conduct the annual compliance evaluations for the stormwater-management program and stormwater-plan reviews.		

5.1 STORMWATER-LOG SHEET AND -INSPECTION CHECKLIST [RIPDES.IV.E.2.j]

The stormwater-log sheet (table 5.1a) and stormwater-inspection checklist (table 5.1b) for facility operations are provided on the following pages. The log sheet and checklist are a permanent record of stormwater-management activities conducted at this facility. Items such as stormwater inspections, PPM spills, or activities related to implementation and maintenance of BMPs should be recorded on the log sheet. The inspection checklist is designed to reinforce the existing BMP program by assessing the effectiveness of implemented measures and controls. Regularly (monthly) updating logs and checklists will aid the facility in tracking pollutant sources, risks, and BMPs. The original documents should be signed and dated, and kept with the SWP3 at the facility for future reference during plan revisions or inquiries by 94th RSC, State, or Federal inspectors.

5.0 Implementation-Continued

Table 5.1b—Stormwater-inspection checklist.

Unit name:		Building name: Quinta-Gamelin USARC		Date:
Problems noted:				
Inspector's name:			Signature:	
Yes	No	Type	Inspection Item	
			Do you see any evidence of recently spilled materials, either solid or liquid?	
			Do you see any evidence of illegal dumping in storm-sewer system or storm drains?	
			Are PPMs exposed to precipitation or stormwater runoff?	
			Are drums, PPM storage structures, and secondary-containment units secure and properly labeled?	
			Is a contract in place for the proper collection and disposal of spent PPMs generated at the OMS?	
			Are military vehicles and equipment stored outdoors free of excessive mud and dirt?	
			Do you see excess trash, unswept or cluttered work areas, or materials that can be easily spilled?	
			Are there spots, pools, or other traces of PPMs on the ground?	
			Do you see any leaking military vehicles, drums, tanks, dumpsters, or other equipment?	
			Does standing water have an oil sheen or discoloration?	
			Is vehicle/equipment washing or steam cleaning performed at the vehicle-wash rack?	
			Has the vehicle-wash rack been brought into compliance with RIDEM regulations?	
			Is an updated spill plan or standard operating procedure (SOP) posted on the shop bulletin board?	
			Is spill-containment equipment readily accessible?	
			Are monthly visual inspections performed and documented?	
			Does stormwater runoff enter and cause problems inside shop and storage buildings?	
			Is there any active soil erosion at the facility?	
			Are there areas of standing water at the facility?	
			Are any non-stormwater discharges entering the storm-sewer system or drainage ditches?	
			Do outdoor PPM storage structures prevent contact with precipitation or stormwater runoff?	
			Are secondary-containment units in use at new and used PPM storage areas?	
			Are drip pans in use at the facility? Estimated percentage of vehicles with drip pans: _____%.	
			Are conex boxes or milvans used to store new or used PPMs at this facility? If yes, please give the number of conex boxes or milvans in use: _____	
			Are visual aids such as stormwater posters and warning signs displayed at the facility?	
			Is environmental training provided for personnel working at the facility?

5.0 Implementation-Continued

5.2 ANNUAL COMPLIANCE INSPECTION [RIPDES.IV.E.3]

The SWP3 should be updated annually or more often, as required. The 94th RSC is charged with conducting compliance evaluations and updating the plan. Major tasks include (1) reviewing updated site information (including stormwater-log sheets and stormwater-inspection forms), (2) reinspecting industrial-activity and pollutant-source areas and outfalls, (3) updating information about those areas and the PPMs inventory, (4) conducting non-stormwater-discharge inspections of outfalls, (5) re-evaluating the use of BMPs and recommending additional controls (if necessary), and (6) convening the PPT to review stormwater issues and problems. The compliance update also allows the PPT to assess and update training needs. Table 5.2 provides information on conducting the evaluations.

Table 5.2—Annual compliance schedule.

Compliance element	Conducted by	Start date	Completion date
Review monthly stormwater-inspection checklists completed by the Facility Coordinator			
Review site assessment in SWP3 and update as necessary (outfalls, sources, PPMs, site map)			
Review implementation status of BMPs in SWP3 and update as necessary			
Based on updates to implemented BMPs, update recommended BMPs			
Review and update regulatory information in the SWP3 if necessary			
Conduct NSWD assessment and certification of regulated outfalls			
Conduct stormwater sampling of regulated outfalls if required. (Consult RIDEM and RIDEM General Permit for information.)			
Complete report of compliance findings and sample results, and file

RE: Underground Storage Tank Closure (UST # 1663)
Quinta-Gamelin U.S. Army Reserve Center
Asylum Road
Bristol, RI 02809

Dear Mr. Gagnon;

The Office of Waste Management has reviewed the Permanent Closure Application For Underground Storage Tank(s) for the above referenced property. The following UST(s) are approved to be closed on Thursday, October 5, 2000.

UST ID#	VOLUME/ GALS.	STORED MATERIAL	REMOVED/ FILLED
003	3,000	#2 fuel oil	removal
002	1,000	#2 fuel oil	removal

All USTs are to be removed and handled as described in the closure application. This approval letter along with a copy of the UST Closure Application must accompany the tank(s) during transit to the proper disposal facility.

Your contractor is required to contact the DEM inspector, Michael Cote, on the day of the UST closure for verification. If you have any questions or need additional information feel free to contact at (401) 222-2797, extension 7118.

Sincerely,

Bruce T. Catterall, P.E.

RE: Removal of 3,000-gallon and 1,000-gallon Underground Heating Oil Tank
Quinta-Cranalin U.S. Army Reserve Center, Bristol, RI - USARC
Asylum Road

Dear Chief Sylvania,

The U.S. Army Reserve 94th Regional Support Command (94th RSC) plans to remove the above-referenced heating oil tanks in late-September. They are being removed because both the existing Reserve Center (RC) and Organizational Maintenance Shop (OMS) buildings have been converted to natural gas.

However, due to scheduling conflicts with activities at the Reserve Center, we would like to have the contractor expedite the schedule to remove the tanks tentatively during the week of September 18, 2000. Pending concurrence from you and Nancy Langlois of the Rhode Island Department of Environmental Management (RIDEM), we will be able to meet this schedule.

As such, attached please find the RIDEM Permanent Closure Application for Underground Storage Tanks requiring your signature.

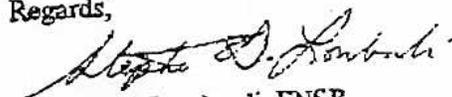

Also, attached please find a pre-paid, pre-addressed Fed Ex label to submit the application to Nancy Langlois at RIDEM following your signature.

In order to allow as much notice as possible for RIDEM's approval of the expedited schedule, could you please fax a copy of this to me at (978) 796-2606 or to Nancy Langlois (RIDEM) at fax # (401) 222-3813).

Also, attached please find a pre-paid, pre-addressed FedEx label to submit the application to Nancy Langlois at RIDEM. Your assistance will be greatly appreciated.

If you have any questions, please call me at Steve Lombardi at (978) 796 - 2607.

Regards,

Stephen D. Lombardi, ENSR
Technical Support to the 94th RSC

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/15/2006 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Other Pertinent Environmental Activity Identified at Site:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

Date of Government Version: 04/19/2006	Source: EPA
Date Data Arrived at EDR: 05/05/2006	Telephone: N/A
Date Made Active in Reports: 05/22/2006	Last EDR Contact: 05/05/2006
Number of Days to Update: 17	Next Scheduled EDR Contact: 07/31/2006
	Data Release Frequency: Quarterly

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/19/2006	Source: EPA
Date Data Arrived at EDR: 05/05/2006	Telephone: N/A
Date Made Active in Reports: 05/22/2006	Last EDR Contact: 05/05/2006

	Data Release Frequency: Quarterly

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NPL RECOVERY: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267
Date Made Active in Reports: 03/30/1994	Last EDR Contact: 05/23/2006
Number of Days to Update: 56	Next Scheduled EDR Contact: 08/21/2006
	Data Release Frequency: No Update Planned

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/01/2006	Source: EPA
Date Data Arrived at EDR: 03/21/2006	Telephone: 703-413-0223
Date Made Active in Reports: 04/13/2006	Last EDR Contact: 06/22/2006
Number of Days to Update: 23	Next Scheduled EDR Contact: 09/18/2006
	Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 02/01/2006	Source: EPA
Date Data Arrived at EDR: 03/21/2006	Telephone: 703-413-0223
Date Made Active in Reports: 04/13/2006	Last EDR Contact: 06/23/2006
Number of Days to Update: 23	Next Scheduled EDR Contact: 09/18/2006
	Data Release Frequency: Quarterly

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 03/15/2006	Source: EPA
Date Data Arrived at EDR: 03/17/2006	Telephone: 800-424-9346
Date Made Active in Reports: 04/13/2006	Last EDR Contact: 05/21/2006
Number of Days to Update: 27	Next Scheduled EDR Contact: 09/04/2006
	Data Release Frequency: Quarterly

RCRA: Resource Conservation and Recovery Act Information

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/09/2006	Source: EPA
Date Data Arrived at EDR: 04/27/2006	Telephone: 800-424-9346
Date Made Active in Reports: 05/30/2006	Last EDR Contact: 06/28/2006
Number of Days to Update: 33	Next Scheduled EDR Contact: 08/21/2006
	Data Release Frequency: Quarterly

ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 12/31/2005	Source: National Response Center, United States Coast Guard
Date Data Arrived at EDR: 01/12/2006	Telephone: 202-260-2342
Date Made Active in Reports: 02/21/2006	Last EDR Contact: 07/25/2006
Number of Days to Update: 40	Next Scheduled EDR Contact: 10/23/2006
	Data Release Frequency: Annually

HMIRS: Hazardous Materials Information Reporting System

Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT.

Date of Government Version: 12/31/2005	Source: U.S. Department of Transportation
Date Data Arrived at EDR: 04/14/2006	Telephone: 202-366-4555
Date Made Active in Reports: 05/30/2006	Last EDR Contact: 07/19/2006
Number of Days to Update: 46	Next Scheduled EDR Contact: 10/16/2006
	Data Release Frequency: Annually

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 03/21/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/27/2006	Telephone: 703-603-8905
Date Made Active in Reports: 05/22/2006	Last EDR Contact: 07/03/2006
Number of Days to Update: 56	Next Scheduled EDR Contact: 10/02/2006
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 03/21/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/27/2006	Telephone: 703-603-8905
Date Made Active in Reports: 05/22/2006	Last EDR Contact: 07/03/2006
Number of Days to Update: 56	Next Scheduled EDR Contact: 10/02/2006
	Data Release Frequency: Varies

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

DOD: Department of Defense Sites

This data set consists of federally owned or administered lands, administered by the Department of Defense, that have any area equal to or greater than 640 acres of the United States, Puerto Rico, and the U.S. Virgin Islands.

Date of Government Version: 12/31/2004	Source: USGS
Date Data Arrived at EDR: 02/08/2005	Telephone: 703-692-8801
Date Made Active in Reports: 08/04/2005	Last EDR Contact: 05/12/2006
Number of Days to Update: 177	Next Scheduled EDR Contact: 08/07/2006
	Data Release Frequency: Semi-Annually

FUDS: Formerly Used Defense Sites

The listing includes locations of Formerly Used Defense Sites properties where the US Army Corps of Engineers is actively working or will take necessary cleanup actions.

Date of Government Version: 12/05/2005	Source: U.S. Army Corps of Engineers
Date Data Arrived at EDR: 01/19/2006	Telephone: 202-528-4285
Date Made Active in Reports: 02/21/2006	Last EDR Contact: 07/17/2006
Number of Days to Update: 33	Next Scheduled EDR Contact: 10/02/2006
	Data Release Frequency: Varies

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients--States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Date of Government Version: 04/26/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 04/27/2006	Telephone: 202-566-2777
Date Made Active in Reports: 05/30/2006	Last EDR Contact: 06/12/2006
Number of Days to Update: 33	Next Scheduled EDR Contact: 09/11/2006
	Data Release Frequency: Semi-Annually

CONSENT: Superfund (CERCLA) Consent Decrees

Major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites. Released periodically by United States District Courts after settlement by parties to litigation matters.

Date of Government Version: 12/14/2004	Source: Department of Justice, Consent Decree Library
Date Data Arrived at EDR: 02/15/2005	Telephone: Varies
Date Made Active in Reports: 04/25/2005	Last EDR Contact: 07/24/2006
Number of Days to Update: 69	Next Scheduled EDR Contact: 10/23/2006
	Data Release Frequency: Varies

ROD: Records Of Decision

Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 04/13/2006	Source: EPA
Date Data Arrived at EDR: 04/28/2006	Telephone: 703-416-0223
Date Made Active in Reports: 05/30/2006	Last EDR Contact: 07/06/2006
Number of Days to Update: 32	Next Scheduled EDR Contact: 10/02/2006
	Data Release Frequency: Annually

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

Date of Government Version: 11/04/2005	Source: Department of Energy
Date Data Arrived at EDR: 11/28/2005	Telephone: 505-845-0011
Date Made Active in Reports: 01/30/2006	Last EDR Contact: 06/21/2006
Number of Days to Update: 63	Next Scheduled EDR Contact: 09/18/2006
	Data Release Frequency: Varies

ODI: Open Dump Inventory

An open dump is defined as a disposal facility that does not comply with one or more of the Part 257 or Part 258 Subtitle D Criteria.

Date of Government Version: 06/30/1985	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/09/2004	Telephone: 800-424-9346
Date Made Active in Reports: 09/17/2004	Last EDR Contact: 06/09/2004
Number of Days to Update: 39	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

PRP: Potentially Responsible Parties

A listing of verified Potentially Responsible Parties

Date of Government Version: 03/09/2006	Source: EPA
Date Data Arrived at EDR: 04/13/2006	Telephone: 202-564-6064
Date Made Active in Reports: 05/19/2006	Last EDR Contact: 07/06/2006
Number of Days to Update: 36	Next Scheduled EDR Contact: 10/02/2006
	Data Release Frequency: Quarterly

TRIS: Toxic Chemical Release Inventory System

Toxic Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.

Date of Government Version: 12/31/2003	Source: EPA
Date Data Arrived at EDR: 07/13/2005	Telephone: 202-566-0250
Date Made Active in Reports: 08/17/2005	Last EDR Contact: 06/22/2006
Number of Days to Update: 35	Next Scheduled EDR Contact: 09/18/2006
	Data Release Frequency: Annually

TSCA: Toxic Substances Control Act

Toxic Substances Control Act. TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site.

Date of Government Version: 12/31/2002	Source: EPA
Date Data Arrived at EDR: 04/14/2006	Telephone: 202-260-5521
Date Made Active in Reports: 05/30/2006	Last EDR Contact: 07/17/2006
Number of Days to Update: 46	Next Scheduled EDR Contact: 10/16/2006
	Data Release Frequency: Every 4 Years

FTTS: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)

FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act). To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 03/29/2006	Source: EPA/Office of Prevention, Pesticides and Toxic Substances
Date Data Arrived at EDR: 04/26/2006	Telephone: 202-566-1667
Date Made Active in Reports: 05/30/2006	Last EDR Contact: 06/19/2006
Number of Days to Update: 34	Next Scheduled EDR Contact: 09/18/2006
	Data Release Frequency: Quarterly

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

FTTS INSP: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)

Date of Government Version: 03/31/2006	Source: EPA
Date Data Arrived at EDR: 04/26/2006	Telephone: 202-566-1667

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 12/31/2004	Source: EPA
Date Data Arrived at EDR: 05/11/2006	Telephone: 202-564-4203

MINES: Mines Master Index File

Contains all mine identification numbers issued for mines active or opened since 1971. The data also includes violation information.

Date of Government Version: 02/09/2006	Source: Department of Labor, Mine Safety and Health Administration
Date Data Arrived at EDR: 03/29/2006	Telephone: 303-231-5959
Date Made Active in Reports: 05/30/2006	Last EDR Contact: 06/28/2006
Number of Days to Update: 62	Next Scheduled EDR Contact: 09/25/2006
	Data Release Frequency: Semi-Annually

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

FINDS: Facility Index System/Facility Registry System

Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 04/27/2006	Source: EPA
Date Data Arrived at EDR: 05/02/2006	Telephone: N/A
Date Made Active in Reports: 05/30/2006	Last EDR Contact: 04/03/2006
Number of Days to Update: 28	Next Scheduled EDR Contact: 07/03/2006
	Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995	Source: EPA
Date Data Arrived at EDR: 07/03/1995	Telephone: 202-564-4104
Date Made Active in Reports: 08/07/1995	Last EDR Contact: 06/05/2006
Number of Days to Update: 35	Next Scheduled EDR Contact: 09/04/2006
	Data Release Frequency: No Update Planned

BRS: Biennial Reporting System

The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

Date of Government Version: 12/31/2003	Source: EPA/NTIS
Date Data Arrived at EDR: 06/17/2005	Telephone: 800-424-9346
Date Made Active in Reports: 08/04/2005	Last EDR Contact: 07/21/2006
Number of Days to Update: 48	Next Scheduled EDR Contact: 09/11/2006
	Data Release Frequency: Biennially

STATE AND LOCAL RECORDS

SHWS: State Hazardous Waste Sites

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

Date of Government Version: 04/05/2006	Source: Department of Environmental Management
Date Data Arrived at EDR: 04/25/2006	Telephone: 401-222-3872
Date Made Active in Reports: 05/24/2006	Last EDR Contact: 06/26/2006

	Data Release Frequency: Quarterly

SWF/LF: Solid Waste Management Facilities

Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 12/31/2004	Source: Department of Environmental Protection
Date Data Arrived at EDR: 02/17/2006	Telephone: 860-424-3375

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: PennWell Corporation

Telephone: (800) 823-6277

This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Day Care Provider Listing

Source: Department of Children, Youth & Families

Telephone: 401-528-3624

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Classification Data

Source: Dept. of Administration/Statewide Planning

Telephone: 401-222-6483

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

UTM Y (Meters):	4617395.0
Elevation:	47 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	41071-F3 BRISTOL, RI
Most Recent Revision:	1975

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

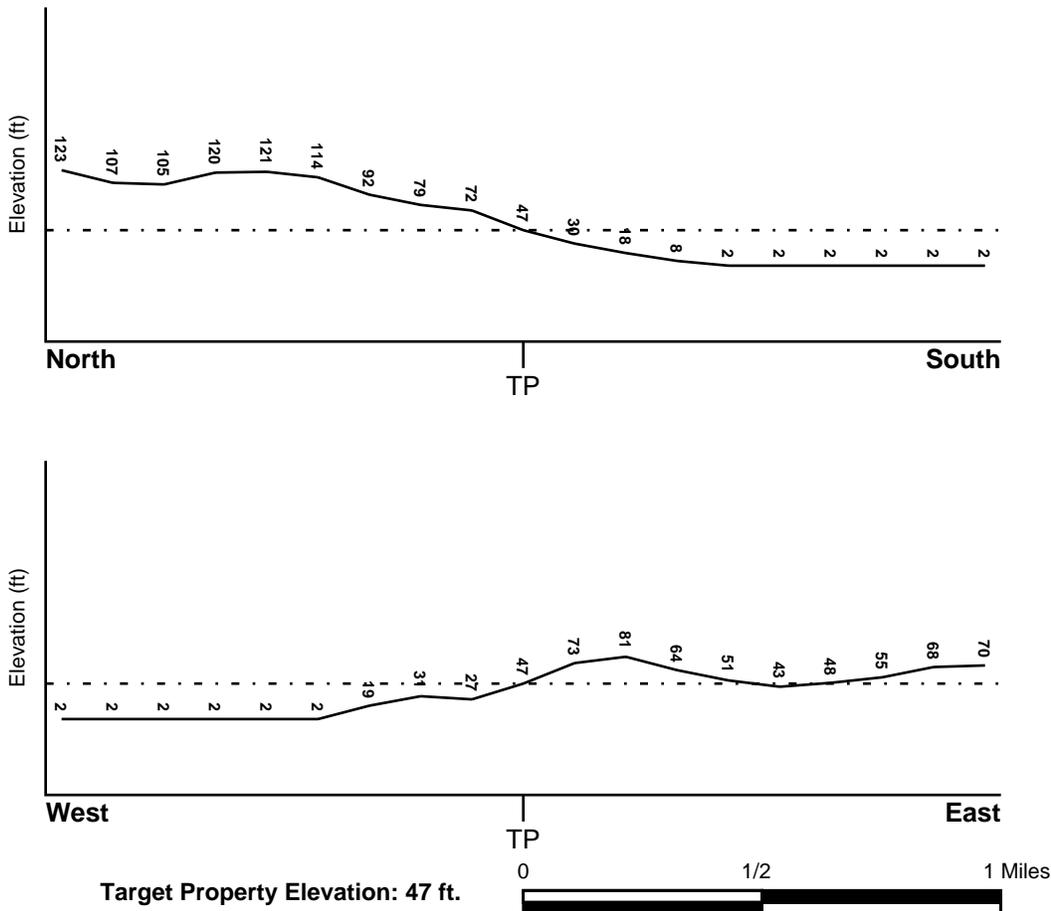

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Target Property County</u> BRISTOL, RI	FEMA Flood <u>Electronic Data</u> YES - refer to the Overview Map and Detail Map
Flood Plain Panel at Target Property:	44001C0013F
Additional Panels in search area:	44001C0011F 44001C0010F 44001C0014F

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u> BRISTOL	NWI Electronic <u>Data Coverage</u> YES - refer to the Overview Map and Detail Map
---	--

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION</u> <u>FROM TP</u>	<u>GENERAL DIRECTION</u> <u>GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: PITTSTOWN

Soil Surface Texture: silt loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained. Soils have a layer of low hydraulic conductivity, wet state high in the profile. Depth to water table is 3 to 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: MODERATE

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	8 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 2.00 Min: 0.60	Max: 6.00 Min: 4.50
2	8 inches	28 inches	silt loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 2.00 Min: 0.60	Max: 6.00 Min: 4.50
3	28 inches	60 inches	channery - silt loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 0.60 Min: 0.06	Max: 6.00 Min: 4.50

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained. Soils have a layer of low hydraulic conductivity, wet state high in the profile. Depth to water table is 3 to 6 feet.

Hydric Status: Soil has not been ranked with a hydric criteria.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

Soil Map ID: 3

Soil Component Name: STISSING

Soil Surface Texture: silt loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Poorly. Soils may have a saturated zone, a layer of low hydraulic conductivity, or seepage. Depth to water table is less than 1 foot.

Hydric Status: Soil meets the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: HIGH

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	8 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 2.00 Min: 0.60	Max: 6.00 Min: 3.60
2	8 inches	15 inches	channery - silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 2.00 Min: 0.60	Max: 6.00 Min: 3.60
3	15 inches	60 inches	channery - silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Clayey Gravel.	Max: 0.20 Min: 0.06	Max: 6.00 Min: 3.60

Soil Map ID: 4

Soil Component Name: MANSFIELD

Soil Surface Texture: mucky - silt loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Very poorly. Soils are wet to the surface most of the time. Depth to water table is less than 1 foot, or is ponded.

Hydric Status: Soil meets the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: LOW

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	8 inches	mucky - silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Organic Clay or Organic Silt.	Max: 2.00 Min: 0.60	Max: 6.50 Min: 4.50
2	8 inches	15 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 2.00 Min: 0.60	Max: 7.30 Min: 5.10
3	15 inches	60 inches	gravelly - fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 0.20 Min: 0.00	Max: 7.30 Min: 5.10

Soil Map ID: 5

Soil Component Name: NEWPORT

Soil Surface Texture: silt loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained. Soils have intermediate water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: LOW

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained. Soils have intermediate water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: LOW

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	8 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 6.00 Min: 0.60	Max: 6.00 Min: 4.50
2	8 inches	24 inches	channery - silt loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 6.00 Min: 0.60	Max: 6.00 Min: 4.50
3	24 inches	65 inches	channery - silt loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 0.20 Min: 0.00	Max: 6.00 Min: 4.50

Soil Map ID: 7

Soil Component Name: PITTSTOWN

Soil Surface Texture: silt loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained. Soils have a layer of low hydraulic conductivity, wet state high in the profile. Depth to water table is 3 to 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: MODERATE

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	8 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 2.00 Min: 0.60	Max: 6.00 Min: 4.50
2	8 inches	28 inches	silt loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 2.00 Min: 0.60	Max: 6.00 Min: 4.50
3	28 inches	60 inches	channery - silt loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 0.60 Min: 0.06	Max: 6.00 Min: 4.50

Soil Map ID: 8

Soil Component Name: MATUNUCK

Soil Surface Texture: hemic material

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Very poorly. Soils are wet to the surface most of the time. Depth to water table is less than 1 foot, or is ponded.

Hydric Status: Soil meets the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: HIGH

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Classification Data

Source: Dept. of Administration/Statewide Planning

Telephone: 401-222-6483

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Community and Non-Community Wells

Source: Department of Environmental Management

Telephone: 401-277-2234

Public wells serving at least 25 residents or 15 service connections year round. Public wells serving at least 25 persons at least 60 days of the year.

EPA-Approved Sole Source Aquifers in Rhode Island

Source: EPA

Sole source aquifers are defined as an aquifer designated as the sole or principal source of drinking water for a given aquifer service area; that is, an aquifer which is needed to supply 50% or more of the drinking water for the area and for which there are no reasonable alternative sources should the aquifer become contaminated.

EDR PUR-IQ[®] Report

"the intelligent way to conduct historical research"

for
Quinta-Gamelin USARC
ASYLUM ROAD
BRISTOL, RI 02809
Lat./Long. 41.687525 / 71.285949
EDR Inquiry # 01714247.206r

The EDR PUR-IQ report facilitates historical research planning required to complete the Phase I ESA process. The report identifies the *likelihood* of prior use coverage by searching proprietary EDR-Prior Use Reports[®] comprising nationwide information on: city directories, fire insurance maps, aerial photographs, historical topographic maps, flood maps and National Wetland Inventory maps.

Potential for EDR Historical (Prior Use) Coverage - Coverage in the following historical information sources may be used as a guide to develop your historical research strategy:

- 1. City Directory:** Coverage may exist for portions of Bristol County, RI.
- 2. Fire Insurance Map:** When you order online any EDR Package or the EDR Radius Map with EDR Sanborn Map Search/Print, you receive site specific Sanborn Map coverage information at no charge.
- 3. Aerial Photograph:** Aerial photography coverage may exist for portions of Bristol County. Please contact your EDR Account Executive for information about USGS photos available through EDR.
- 4. Topographic Map:** The USGS 7.5 min. quad topo sheet(s) associated with this site:
Historical: Coverage exists for Bristol County
Current: Target Property: TP | 1975 | 41071-F3 Bristol, RI

EDR's network of professional researchers, located throughout the United States, accesses the most extensive national collections of city directory, fire insurance maps, aerial photographs and historical topographic map resources available for BRISTOL, RI. These collections may be located in multiple libraries throughout the country. To ensure maximum coverage, EDR will often assign researchers at these multiple locations on your behalf. Please call or fax your EDR representative to authorize a search.

EDR City Directory Abstract

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening report designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Thank you for your business.

Please contact EDR at 1-800-352-0050
with any questions or comments.

SUMMARY

- ***City Directories:***

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1984 through 2005. (These years are not necessarily inclusive.) A summary of the information obtained is provided in the text of this report.
