# EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

### FEDERAL RECORDS

**NPL:** Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 04/19/2006 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

southern portion of Texarkana, is approximately one mile from the Texas- Arkansas state line. The Site is bordered by the Texas and Pacific Railroad to the north, an unnamed tributary to the northwest, Wagner Creek to the west, Jamison Street to the south, a drainage ditch to the southeast, and a subdivision to the east. Access to the Site is by Fourth Street which connects to Lake Drive. The Site consists of a former wood treating facility. Following the discontinuation of the wood treating operations and the dismantling of plant structures at the Site, a former housing development, a former sand and gravel operation, and a former church were subsequently located on various portions of the Site. The former housing development, Carver Terrace Subdivision, occupied the northern 33.5 acres and consisted of 79 predominantly one-story houses, vacant lots, and four roads. The Mount Zion Missionary Baptist Church occupied a 0.5-acre lot at the southeast corner of the subdivision at approximately the midpoint of the eastern boundary of the Site. The Site also includes one small parcel of residential property immediately east of the church owned by Mr. Jesse Pace. The remainder of the Site, the southern approximately one-half, is the former Kennedy Sand and Gravel Company and consists of mixed fields and woodlands with two gravel pits. Creosoting (i.e., wood preserving/treating) operations began at the Site in 1910. The wood preserving facility consisted of an operations area, a drip track and treated and untreated wood storage areas. The operations area included wood treating cylinders, chemical storage tanks and a wastewater lagoon; this area was located in the east-central portion of the Site. The chemicals used to treat the timber included pentachlorophenol, creosote and metallic salts. The drip track ran diagonally from the operations area to the northwest and ended at the northern boundary of the Site. Treated wood was stored in the western and southern areas of the Site. Untreated wood was stored in the northeastern area. Operations ceased in 1961, the structures were removed and the property was sold in 1962; no single landowner retained ownership of the property for any extensive length of time until it was purchased by Carver Terrace, Inc., in February 1964. Carver planned to develop the entire 62-acre Site but because of the flooding potential in the southern approximate one-half of the Site, only the northern 33.5 acres were eventually developed for residential use. In 1975, 28 acres on the southern approximately one-half of the Site were sold to the Kennedy Sand and Gravel Company which mined sand and gravel until 1984, when the Texas Department of Water Resources [TDWR, presently the Texas Natural Resource Conservation Commission (TNRCC)] ordered the company to cease operations. In 1975, Mount Zion First Missionary Baptist Church purchased the one-half acre tract located on the southeast corner of the subdivision from Carver Terrace, Inc., and constructed the church building. The City of Texarkana owns a drainage easement and a right of way in the southern portion of the Site. In 1980, the TDWR brought the Site to the attention of the EPA. The TDWR and EPA sampled the Site in 1980 and 1981, respectively. Based on this information, TDWR referred the Site to EPA for inclusion on the National Priorities List (NPL). The EPA proposed adding the Site to the NPL in October 1984; the Site was listed on the NPL on June 6, 1986. A Record of Decision (ROD) addressing the entire site, including ground water, was signed on September 23, 1988. On March 4, 1992, EPA amended the ROD. The amended ROD did not alter the remediation alternatives selected for the Site or the ground water remediation goals determined

in the 1988 ROD. However, the amended ROD changed the land use of the Site from residential to non-residential, included the buyout of the Carver Terrace Subdivision, provided for relocation assistance for all affected residents, and demolition of the houses. It also separated the work required for the site into three operable units, as described below. OU-1: Purchase of homes and provision of relocation assistance, was completed in 1994. OU-2: destruction, removal and disposal of structures and debris were completed in 1994; excavation to a depth one foot and off-site disposal of impacted soils and replacement of excavated areas with clean fill was completed June 1996. OU-3: Ground water contaminants were observed over approximately the southern two-thirds of the Site with only a little off-site migration. It was estimated that as many as 45 million gallons of ground water contain these contaminants. As with the surface and surficial soils, Polycyclic Aromatic Hydrocarbons (PAHs) were the contaminants found most often in ground water, although volatile compounds such as benzene and toluene were also found. The highest concentrations were found in or near subsurface pools of Non-Aqueous Phase Liquids (NAPLs); these were found under the operations and drip track areas of the old wood preserving facility. Pentachlorophenol (PCP) was found only in the old lagoon area. Metals were also found over the Site but only at levels below drinking water levels. The upper aquifer serves as a source of contamination to surface waters. There are observable seeps of NAPLs from the aquifer into both Wagner Creek and the open gravel pits within the former Kennedy Sand and Gravel area. Surface water samples showed no detectable concentrations of Site contaminants except for those direct samples of the seeps; impacts were more noticeable in the sediments. PAHs were seen in Wagner Creek sediments just below the location of the seep. The remedial goal for ground water was selected to prevent migration of NAPLs. Ground water vertical migration for the lower silty sand aquifer is upward; most site contaminants will most likely not migrate to the lower aquifer unless those contaminants are heavier than water and overcome the upward force of ground water flow from deeper aquifers. The dense NAPLs have the ability to migrate, and therefore will be removed. Light NAPLs do migrate into Wagner Creek through ground water transport, and therefore, they must also be removed from the subsurface. The 1992 ROD Amendment for OU 1 & 2 also created OU-3, which concerned groundwater. It specified removal of NAPLs to the maximum extent possible and treatment of extracted ground water to Best Available Treatment (BAT) requirements for the Organic Chemical, Plastics, and Synthetic Fibers industry prior to discharge to Wagner Creek. Ground water discharged to the publicly-owned treatment works (POTW) must meet applicable pretreatment standards. In February 1996, the responsible party (RP) submitted a Dense Non-Aqueous Phase Liquid (DNAPL)/Groundwater Pilot Study Work Plan for the Site. The approach proposed in the plan included treatment of ground water produced with the recovered NAPLs at an on-site treatment facility via NAPLs/water separation, metals precipitation, coagulation and flocculation, dissolved air flotation, filtration, activated carbon adsorption and discharge of the pre-treated ground water to the POTW in accordance with the ROD. On February 13, 1996, the RP submitted a modified discharge permit application to the Texarkana Water Utilities (TWU), operator of the local POTW. During communications with the TWU, the TWU indicated that it would not issue a permit for discharge of Site

pre-treated ground water to its facility regardless of the level of pre-treatment performed. As a result of TWU's refusal to accept pre-treated water, the RP developed an alternative approach to NAPLs collection that does not require discharge of pre-treated ground water to the POTW. This alternative approach utilizes large diameter recovery sumps to effectuate the physical separation of NAPLs and ground water in the well and to allow for the separate collection of NAPLs and ground water in-situ. An Explanation of Significant Differences (ESD) adopting this alternative approach for ground water remediation at the site was signed in August 2002.

Summary Details:

" Conditions at proposal (October 15, 1984): Koppers Co., Inc., operated a 62-acre wood-processing plant in Texarkana, Bowie County, Texas, between 1939 and 1961. Wood-processing operations began at the site in 1903. The processes used by the Koppers plant involved creosote, pentachlorophenol (PCP), and zinc. The site is currently owned by the Bruce Kennedy Sand & Gravel Co., the Mt. Zion Missionary Baptist Church, and about 78 homeowners in the Carver Terrace subdivision. Until recently, gravel and sand were mined at the site. Open gravel pits filled with ground water remain in the southern portion. Oil stains and seeps have been observed in these pits, which drain directly to Cowhorn Creek. Test borings and analysis of samples by the State and Koppers have confirmed contamination of soils and ground water on and off the site with PCP, zinc, and polynuclear aromatic hydrocarbons. About 150 people depend on wells within 0.5 mile of the site as a source of drinking water. Status (June 10, 1986): In October 1984 and February 1985, EPA used CERCLA emergency funds to sample on-site surface soils. Based on results of these samples and under Administrative Orders on Consent signed by EPA and Koppers Co., Inc., in December 1984 and July 1985, Koppers fenced the southern half of the site and placed a "protective barrier" in the yards of about 18 of the residences. EPA completed a workplan for a remedial investigation/feasibility study (RI/FS) to determine the type and extent of contamination at the site and identify alternatives for remedial action. EPA and Koppers signed an Administrative Order on Consent in March 1985 for Koppers to conduct the RI/FS with EPA oversight. All pre-field activities have been completed to EPA specifications, and Koppers is presently conducting the field phase of the RI/FS."

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## **FEDERAL RECORDS**

### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

### **DELISTED NPL: National Priority List Deletions**

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

### **NPL RECOVERY: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## **CERCLIS:** Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Number of Days to Update: 23	Next Scheduled EDR Contact: 09/18/2006
	Data Release Frequency: Quarterly

## **CERCLIS-NFRAP:** CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

## **RCRA:** Resource Conservation and Recovery Act Information

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

## **US INST CONTROL:** Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

## **US BROWNFIELDS:** A Listing of Brownfields Sites

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

### **UMTRA:** Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

## **RAATS:** RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

## STATE AND LOCAL RECORDS

### **SHWS:** State Superfund Registry

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

### **Manufactured Gas Plants:** EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Most Recent Revision:	2001

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

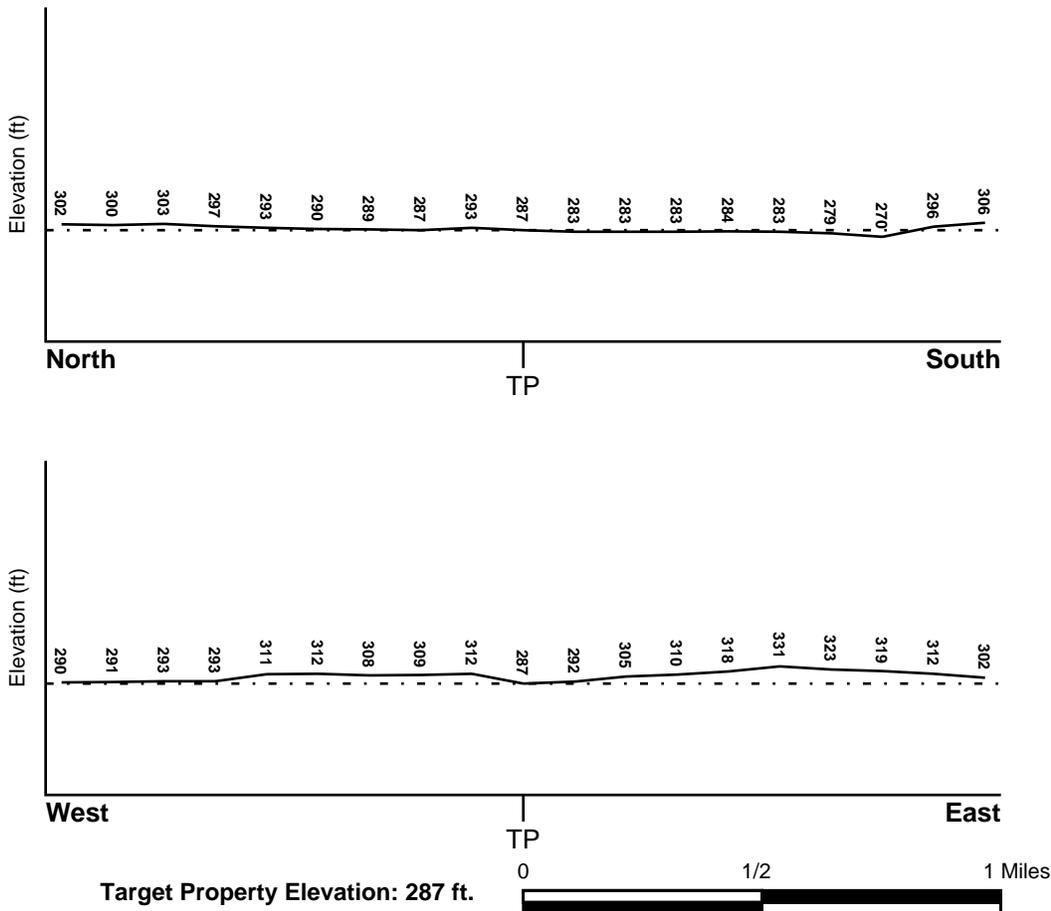

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## **HYDROLOGIC INFORMATION**

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## **HYDROGEOLOGIC INFORMATION**

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

## GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

### ROCK STRATIGRAPHIC UNIT

Era: Cenozoic  
System: Tertiary  
Series: Eocene Wilcox Group  
Code: Te1 (*decoded above as Era, System & Series*)

### GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

## DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: SAWYER

Soil Surface Texture: silt loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained. Soils have a layer of low hydraulic conductivity, wet state high in the profile. Depth to water table is 3 to 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: HIGH

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

## LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

## TOPOGRAPHIC INFORMATION

### **USGS 7.5' Digital Elevation Model (DEM)**

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### **Scanned Digital USGS 7.5' Topographic Map (DRG)**

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

## HYDROLOGIC INFORMATION

**Flood Zone Data:** This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

## HYDROGEOLOGIC INFORMATION

### **AQUIFLOW<sup>R</sup> Information System**

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### **Geologic Age and Rock Stratigraphic Unit**

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### **STATSGO: State Soil Geographic Database**

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### **SSURGO: Soil Survey Geographic Database**

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.
