Louisville, Kentucky 40202-2232**

**FEBRUARY 2007**

## CERTIFICATION

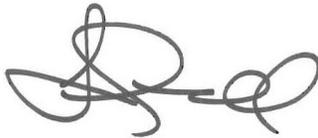

All information/documentation provided accurately reflects the environmental condition of the property. This ECP Report is in general accordance with the U.S. Department of Defense (DoD) requirements for completion of an Environmental Condition of Property (ECP) Report.

---

**DAVID L. MOORE**  
**Chief, Environmental Division**  
**88th Regional Readiness Command**

DATE

The undersigned certifies the contents of this report are in general accordance with DoD policies for the completion of an ECP.

DATE

# Executive Summary

---

CH2M HILL, under contract to the U.S. Army Corps of Engineers, Louisville District, prepared this Environmental Condition of Property (ECP) Report for the SSG Roy Clifton Scouten U.S. Army Reserve (USAR) Center (Facility ID OH037), hereafter referred to as the "Property" or "USAR Center." The Property is located in 271 Hedges Street, Mansfield, Richland County, Ohio, 44902, and encompasses approximately 4 acres.

This ECP Report was conducted in conformance with the Department of Defense's Base Redevelopment and Realignment Manual (BRRM), DoD 4165.77-M, Army Regulation 200-1, and the American Society for Testing and Materials (ASTM) Designation D6008-96 (2005), *Standard Practice for Conducting Environmental Baseline Surveys*.

This ECP Report details the history of the Property, including the USAR and any prior tenant uses of the Property and the resulting environmental condition of the Property.

The USAR Center is on approximately 4 acres of land with two permanent structures, a 13,612-square-foot main building and a 2,500-square-foot Organizational Maintenance Shop (OMS). The USAR soldiers under the 88th Regional Readiness Command (RRC) were the former occupants of the USAR Center. The property has been used as a USAR Center since the U.S. Government acquired the property, and the Property is currently unoccupied.

Based on a review of aerial photographs and U.S. Geological Survey topographic maps dating back to 1915, the site developed over time. The 1915 topographic map shows the City of Mansfield and the Property were located on the northern edge of Mansfield in a developed area. The aerial photographs, dated 1966, 1979, 1987, and 1998, show that the Property has been developed since the mid-60s and that the area has remained relatively unchanged since then.

Areas of potential environmental concern were reviewed and CH2M HILL found no significant findings relating to the environmental condition of the Property.

In accordance with Department of Defense policy defining the classifications (See Sherri Goodman Memorandum dated 21 October 1996), the Property has been classified as Type 1. This classification does not include categorizing the property based on *de minimis* conditions that generally do not present material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

# 1 Introduction

---

CH2M HILL, under contract to the U.S. Army Corps of Engineers (USACE) Louisville District Engineering Division was authorized to conduct an Environmental Condition of Property (ECP) report for the SSG Roy Clifton Scouten U.S. Army Reserve (USAR) Center (OH037). The facility is located at 271 Hedges Street, Richland County, Mansfield, Ohio, and is hereafter referred to as the Property or USAR Center. CH2M HILL prepared this ECP report under Contract Number W912QR-04-D-0020, Task Order No. 0018, with the Louisville District USACE.

A visual non-intrusive reconnaissance of the Property was conducted on July 31, 2006, in support of the ECP. The reconnaissance purpose was to visually obtain information indicating the likelihood of recognized environmental conditions associated with the Property or adjacent properties.

In preparing this ECP report, CH2M HILL gathered information from available records and previous work from others, interviews with individuals purporting to be familiar with the Property, and observations from a site reconnaissance. The accuracy of the information obtained from these sources was not verified by CH2M HILL. As such, CH2M HILL will make no warranty, expressed or implied, relative to the accuracy, completeness, or reliability of the information used to create the records and reports prepared by others.

## 1.1 Purpose of Environmental Condition of Property

The Military Department with real property accountability shall assess, determine, and document the environmental condition of all transferable property in an ECP Report. This ECP Report is based on readily available information. Pursuant to the Department of Defense's (DoD) policy, set forth in the Base Redevelopment and Realignment Manual (BRRM) (DoD 4165.66-M, March 1, 2006) Section C8.3, the primary purposes of the ECP Report include the following:

- Provide the Army with information it may use to make disposal decisions.
- Provide the public with information relative to the environmental condition of the property.
- Assist in community planning for the reuse of Base Realignment and Closure (BRAC) property.
- Assist federal agencies during the property screening process.
- Provide information for prospective buyers.
- Assist prospective new owners in meeting the requirements under U.S. Environmental Protection Agency's (USEPA) "All Appropriate Inquiry" regulations.
- Provide information about completed remedial and corrective actions at the property.

- Assist in determining appropriate responsibilities, asset valuation, and liabilities with other parties to a transaction.

The ECP Report contains the information required to comply with the provisions of 40 Code of Federal Regulations (CFR) Part 373, which require that a notice accompany contracts for the sale of, and deeds entered into, for the transfer of federal property on which any hazardous substance was stored, released or disposed of. The Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Section 120(h) stipulates that a notice is required if certain quantities of designated hazardous substances have been stored on the property for 1 year or more—specifically, quantities exceeding 1,000 kilograms (kg) or the reportable quantity, whichever is greater, of the substances specified in 40 CFR 302.4 or 1 kg of acutely hazardous waste as defined in 40 CFR 261.30. A notice is also required if hazardous substances have been disposed of or released on the property in an amount greater than or equal to the reportable quantity. Army Regulation (AR) 200-1 requires that the ECP Report address asbestos, lead-based paint (LBP), radon, and other substances potentially hazardous to human health.

This ECP Report used the American Society for Testing and materials (ASTM) Designation D6008-96 (2005), *Standard Practice for Conducting Environmental Baseline Surveys*, the BRRM, CERCLA § 120, and AR 200-1.

## 1.2 Scope of Services

This ECP report covers the USAR Center located on 4 acres of land in a commercial and residential district of Mansfield, Ohio. The facility is located at 271 Hedges Street, Mansfield, Ohio. The Property is bounded to the west by Hedges Street and residential area. To the south is the Richland New Hope Center that provides social services and houses a vehicle maintenance facility. The New Hope Child Care Center is located to the north, and a public swimming pool is located to the east.

All site maps, figures, and aerial photographs referenced herein are provided in Appendix A, while Appendix B contains photographs taken during the July 31, 2006, site reconnaissance. Appendix C contains the Property warranty deeds and chain of title information, and lease or permit agreements, if applicable. Relevant historical environmental documents and reports are provided in Appendix D, while Appendix E contains the Environmental Data Resources, Inc. (EDR) radius search reports commissioned for this effort.

This ECP report classifies the Property into one of seven DoD Environmental ECP categories as defined by the DoD policy defining the classifications (see Sherri Goodman Memorandum dated 21 October 1996). The property classification categories are as follows:

- ECP Area Type 1—An area or parcel of real property where no release or disposal of hazardous substances or petroleum products or their derivatives has occurred (including no migration of these substances from adjacent properties).
- ECP Area Type 2—An area or parcel of real property where only the release or disposal of petroleum products or their derivatives has occurred.

- ECP Area Type 3— An area or parcel of real property where release, disposal, or migration, or some combination thereof, of hazardous substances has occurred, but at concentrations that do not require a removal or remedial action.
- ECP Area Type 4— An area or parcel of real property where release, disposal, or migration, or some combination thereof, of hazardous substances has occurred and all remedial actions necessary to protect human health and the environment have been taken.
- ECP Area Type 5— An area or parcel of real property where release, disposal, or migration, or some combination thereof, of hazardous substances has occurred and removal or remedial actions, or both, are underway, but all required actions have not yet been taken.
- ECP Area Type 6— An area or parcel of real property where release, disposal, or migration, or some combination thereof, of hazardous substances has occurred, but required response actions have not yet been initiated.
- ECP Area Type 7— An area or parcel of real property that is unevaluated or requires additional evaluation.

## 2 Site Location and Physical Description

---

### 2.1 Site Location

The USAR Center is located in Richland County, in the city of Mansfield, Ohio, at 271 Hedges Street. A site location map is available as Figure 1 in Appendix A. The 4-acre parcel is bounded to the west by Hedges Street and residential area. To the south is the Richland New Hope Center that provides social services and houses a vehicle maintenance facility. The New Hope Child Care Center is located to the north, and a public swimming pool is located to the east.

### 2.2 Asset Information

Facility Name and Address:	SSG Roy Clifton Scouten U.S. Army Reserve Center 271 Hedges Street Mansfield, Ohio 44902
Property Owner:	U.S. Government
Date of Ownership:	September 24, 1956
Current Occupants:	Facility was vacated as of September 15, 2006
Zoning:	Commercial/Residential
County, State:	Richland, Ohio
USGS Quadrangle(s):	Mansfield North, Ohio
Section/Township/Range:	Section 9, Township 12 North, Range 22 West
Latitude/longitude:	40°45'3.6"N; 82°39'35.6"W
Legal Description:	Being that parcel or tract of land, known as Tract A-100, situated and lying in the Northwest quarter of Section 27, in the City of Mansfield, Richland County, State of Ohio.

### 2.3 Physical Description

The USAR Center is located on a 4-acre parcel in Mansfield, Ohio, and contains two permanent structures and two parking lots. A site map is included as Figure 2 in Appendix A. Construction of both the main building and the Organizational Maintenance Shop (OMS) were completed in 1958. Both structures are on concrete foundations and consist of concrete block walls covered with a brick veneer. A military equipment parking (MEP) area and a privately owned vehicle (POV) parking area also are contained within the Property. Chain-link security fencing encloses the MEP area and OMS building.

Approximately 75 percent of the Property is covered by impervious surface features such as asphalt parking areas, driveways, and concrete walkways. The remaining land is grassed with a sparse population of trees scattered over the Property.

The USAR Center functions as an administrative and drill facility for USAR (Figure 3, Appendix A). It is a multiple-level irregular-shaped building consisting of a one-story administration section and a two-story drill hall connected by a one-story, L-shaped enclosed corridor. A set of double doors are located on the west side of the building. Additional entrances are on the south and east walls. A metal overhead retractable bay door is located on the east wall. A flat roof covers the structure.

The OMS functions as a vehicle maintenance facility for the USAR Center (Figure 4, Appendix A). It is a one-story, rectangular building that rests on a concrete foundation with concrete block walls and a brick veneer. Two metal overhead retractable bay doors are located on north side of the building. Additional entrances include metal pedestrian doors with concrete steps located on the east and west walls. A flat roof covers the structure.

## 2.4 Site Hydrology and Geology

Mansfield is located in central Richland County in north-central Ohio. The eastern, central, and southwestern parts of Richland County are within the Kilbuck-Glaciated Pittsburgh Plateau. Highly variable topography and relief are found in Richland County. The southern, central, and eastern portions of the county feature steep, bedrock-controlled ridges separated by broad, flat stream valleys. Relief becomes steeper toward the thinly glaciated southeast corner. Gently rolling ground moraine and hummocky end moraines characterize the northern and western portions of the county. Maps provided in Angle (2003) show the location of the USAR Center as falling within a buried valley geologic setting, where glacial drift consisting of clay, sand, and gravel fills in a valley eroded into underlying bedrock by a prehistoric stream system.

### 2.4.1 Surface Water Characteristics

Figure 7 in Appendix A provides the 1965-1972 U.S. Geological Survey (USGS) 7.5-minute topographic map, Mansfield North, that includes the Property. As shown on the EDR radius map with GeoCheck (report dated July 12, 2006), the Property is situated at an elevation of approximately 1,286 feet above mean sea level and is relatively flat. Surface water from the site infiltrates into the underlying soil. Surface water that does not infiltrate into the underlying soil generally moves via sheet flow toward the southeast portion of the Property. A French drain runs along the south side of the MEP area. Surface water eventually flows into the City of Mansfield stormwater system. As indicated in the 2005 natural resource survey, no wetlands occur on the Property.

### 2.4.2 Hydrogeological Characteristics

Richland County lies within the Glaciated Central hydrogeologic setting. A complex network of buried valley systems crosses the county. Valleys containing streams that were flowing south prior to the advance of the ice typically contain fairly coarse, thick sand and gravel outwash deposits that can have maximum yields exceeding 500 gallons per minute. Maps provided by Angle (2003) show the location of the USAR Center within the

hydrogeologic setting coded 7DD122. This code indicates that the site overlies a buried valley aquifer consisting of sand and gravel. Depth to groundwater in the buried valley aquifer beneath the site exceeds 100 feet. Due to the relatively low permeability of the sand, gravel, silt, and clay in the unsaturated zone, the area in which the Property lies was mapped as having a relatively low potential for allowing groundwater contamination to occur (maps provided in Angle [2003]). Groundwater is assumed to flow east-northeast toward Rocky Fork Creek, which is located approximately 0.75 mile east-northeast of the Property.

## 2.5 Site Utilities

*Water Service*—The City of Mansfield provides potable water service to the Property.

*Sanitary Sewer System*—The City of Mansfield provides sanitary sewer service to the Property. The primary source of wastewater that is directed to the city sewer system includes non-process wastewater (bathrooms, sinks, etc.).

*Gas and Electric*—Columbia Gas of Ohio provides natural gas service to the Property, and Ohio Edison provides electric service to the Property.

## 2.6 Water Supply Wells and Septic Systems

Based on a review of available historical site and agency records and interviews with site personnel, there are no water supply wells located currently or historically at the Property. Potable water is supplied by the City of Mansfield. The City of Mansfield has supplied potable water to the facility since it was constructed.

## 3 Site History

---

### 3.1 History of Ownership

A historical chain of title report, dated September 11, 2006, for the Property is included in Appendix C. The title indicated that the U.S. Government purchased the Property in September 1956.

According to a city directory provided by EDR dated July 17, 2006, the address of the USAR Center was first listed in the research source, Burch Directory Co., in 1986 and in the Polk City Directory in 1996. Subsequent city directory searches do not list the Property. A copy of the city directory is included in Appendix E.

### 3.2 Past Uses and Operations

The USAR Center is an administrative and educational facility (Photograph 1, Appendix B), with limited maintenance of military vehicles occurring in the OMS building. Reservists historically used the Property for drill activities on various weekends throughout the year. An outdoor hazardous material storage shed is located north of the OMS building within the MEP area and is used to store potentially hazardous substances and petroleum, oil, and lubricant (POL) products (Photograph 2, Appendix B). The OMS building was used to perform limited maintenance activities on military equipment (Photograph 3, Appendix B). Activities inside the OMS building were limited to vehicle maintenance such as checking vehicle motor oil and antifreeze levels and changing batteries (Photograph 4, Appendix B). Any equipment requiring heavier maintenance activities was sent to an Area Maintenance Support Activity (AMSA) shop located at one of the other USAR centers. Equipment requiring major overhaul also was sent offsite. Site records indicate the main building and OMS were constructed and have been in operation since 1956.

Topographic maps (dated 1915, 1960, 1972, 1974, and 1982) and historical aerial photographs (dated 1964, 1966, 1979, and 1998) were the primary source of information on the past use and operations at the Property. Figures 5 through 13 in Appendix A provide USGS topographic maps and aerial views of the Property and surrounding areas.

The 1915 USGS topographic map (Figure 9, Appendix A) shows the city of Mansfield, which was founded in 1808. The USGS topographic maps (Figures 5 through 8, Appendix A) show that the facility is located on the northern edge of Mansfield in a slightly developed area, and little change is noted over time (dates ranging from 1960 to 1982). During the site visit on July 31, 2006, new growth was noted in the area that is not noted on the maps.

The 1966, 1979, 1987, and 1998 aerial photographs are provided as Figures 10 through 13 in Appendix A. The 1966 photograph is of poor quality and most of the eastern part of the site is outside the area covered by the photograph, but the USAR Center is visible along with part of the OMS. The property to the north and west has been developed and the area to the south is not visible due to the quality and coverage of the photograph. The southern portion

of the site is not visible in the 1979 photograph, but the buildings, POL, and MEP are visible. The properties to the north and west appear similar to their appearance in 1966. The 1987 photograph shows the site from a high altitude and the areas around the property are shown to be developed. In the 1998 photograph the southeast portion of the site is not visible. The site and the surrounding properties look relatively unchanged from the altitude of the aerial.

### **3.3 Past Use, Storage, Disposal, and Release of Hazardous Substances**

#### **3.3.1 Past Use and Storage of Hazardous Substances**

Information related to the past use and storage of hazardous substances at the Property was compiled through review of available site records, search of federal and state environmental databases, and interviews with USAR personnel. Chemicals formerly used and stored at the Property were associated with vehicle and facility maintenance activities, and janitorial services. Janitorial chemicals and building maintenance-related products were stored in the designated storage area within the janitorial closet located in the main building. Vehicle maintenance products and small amounts of POL products also were stored within designated areas in the OMS building. Other potentially hazardous materials and POL products would have been stored in the outdoor hazardous material storage shed located north of the OMS building within the MEP area (Photograph 2, Appendix B).

Certain types of chemical products used and stored at the Property would have contained hazardous substances pursuant to CERCLA §101(14) (42 United States Code [USC] 9601(14)) and would have been stored on a rotational basis in amounts necessary to support the unit through direct support-level maintenance. There is, however, no indication that hazardous substances pursuant to CERCLA §101(14) (42 USC 9601(14)) were stored at the Property for 1 year or more in excess of corresponding reportable quantities.

#### **3.3.2 Past Disposal and Release of Hazardous Substances**

Information related to past disposal and potential release of hazardous substances at the Property was compiled through review of available site records, search of federal and state environmental databases, and interviews with USAR personnel. According to 88th Regional Readiness Command (RRC) personnel, disposal of hazardous materials/hazardous waste had been accomplished through the Defense Reutilization and Marketing Office (DRMO) or an authorized vendor such as Safety-Kleen. No stained soil or stressed vegetation was observed during the July 31, 2006, site reconnaissance. Additionally, the MEP area and POV parking area did not show any signs of staining, and no noxious or foul odors were noted during the site reconnaissance.

### **3.4 Past Presence of Bulk Petroleum Storage Tanks**

Based on a review of available site records, a search of federal and state environmental databases, and interviews with USAR personnel, it does not appear that any bulk petroleum underground storage tanks (USTs) or aboveground storage tanks (ASTs) are currently

located at this facility, nor was there any evidence of USTs or ASTs observed during the site reconnaissance. A UST associated with operations at an oil/water separator (OWS) was formerly located at the site, but it was removed as described in Section 3.5.1.

## **3.5 Review of Previous Environmental Reports**

A review of site records produced several reports pertaining to the Property. The following subsections provide a brief summary of these reports. Copies of the reports, unless otherwise specified, are provided in Appendix D.

### **3.5.1 1999 UST Removal Report**

This report by Harza Environmental Services, Inc. (Harza, 1999) documents the removal of one UST at the Property in December 1998. The report states in the introduction that the UST is 550-gallon tank; however, forms completed for the closure that were submitted to the Bureau of Underground Storage Tank Regulations (BUSTR) state that the tank is 500 gallons. Documentation includes a letter from BUSTR dated June 15, 1999, requiring no further action (NFA) at the Property related to the UST removal (BUSTR, 1999).

### **3.5.2 Cultural Resources Report**

The Fort McCoy Archaeological Laboratory prepared a Section 110 cultural resources survey report for the 88th RRC in December 1998 through December 1999. The purpose of the survey and subsequent report was to inventory all properties controlled or leased by the 88th RRC in the state of Ohio. Historical information, setting and landscape, cultural resources, security, architectural information, and structure descriptions are included for each property. Each site also was assessed for its eligibility to the National Register of Historic Places (NRHP). No facilities at the USAR Center were eligible for listing on the NRHP.

### **3.5.3 1996 ECAS Report**

An environmental compliance and assessment study (ECAS) report was prepared for the facility in 1996, and four management findings were identified in the areas of hazardous substance management, tanks, and radon. These findings have no significant impact on the facility.

### **3.5.4 2000 ECAS Report**

An ECAS report was prepared for the facility in 2000, and four regulatory findings were found with the air and hazardous waste programs. Although these findings were regulatory, they should have no significant impact on the facility.

### **3.5.5 2005 Environmental Survey Report: Asbestos, PCB, Lead-based Paint, and Radon Survey**

ITI of South Florida, Inc. prepared an environmental survey report in June 2005 for the USAR Center. Only the main building and OMS building were included in the surveys. Potential types, quantities, locations, and conditions of asbestos, polychlorinated biphenyls (PCBs), LBP, and radon were examined in the report. The survey confirmed LBP was found

to be on the interior walls of the boiler room and in the men's bathroom in the main building. In the OMS, LBP was found on the grey metal doors and on the interior overhead door components.

Asbestos-containing floor tiles and mastic in the main building were found to contain asbestos, along with a water storage tank in the mechanical room, thermal pipe insulation, and pipe fittings throughout the building; exhaust flue mud in the mechanical room; transite wall board in the men's bathroom; and joint tape/mud compound throughout the building. The folding divider between Classrooms 1 and 2 was suspected to contain asbestos, but was not confirmed. No asbestos-containing material (ACM) was found in the OMS building. Roofing materials, fire doors, and electrical wiring in both facilities were suspected to contain asbestos, but it was not confirmed.

During the PCB survey, light ballasts were observed in the OMS building that were labeled as "No PCBs," and none were noted in the main building. Three pole-mounted transformers were noted outside the facilities that did not have labeling indicating the absence or presence of PCBs. It is suspected, however, that PCBs are present in the transformers, but it was not confirmed.

Throughout the facility, all measured radon levels in the USAR Center were above USEPA's recommended action level of 4 picoCuries per liter (pCi/L) of air.

### **3.5.6 2005 Natural Resources Survey**

In 2005, a natural resources survey was conducted on the Property that included an evaluation of land use, geologic resources, water resources, biological resources, and other sensitive resources. Land use was described as 56 percent improved areas and 44 percent maintained grass areas with a flat topography. No surface water resources were identified on the Property; however, an unnamed creek was identified approximately 100 feet south of the Property. No wetlands were identified on the Property; however, a wetland was identified 980 feet southeast of the Property. Rare species were not identified on the Property. The onsite potential for rare species habitat is considered low due to the lack of natural areas.

### **3.5.7 2004 Oil/Water Separator Closure Report**

Jones Technology, Inc. prepared an OWS closure report for the Property, dated May 2004, documenting the removal of an OWS, vehicle wash rack, grit trap, and an elevated grease rack at the Property in April 2002. The structures were in good condition, and no contamination was encountered during the closures. Jones Technology, Inc. recommended NFA for this site in its report. This recommendation was based on visual observations, head space photoionization detector soil analyses, and laboratory soil analyses for total petroleum hydrocarbons, volatile organic compounds, and metals.

## 4 Adjacent Properties

Adjacent property land uses are significant to the ECP process, as these current or past uses may have an environmental impact on the USAR Center. Adjacent properties were included in the EDR report review for this reason. Typically, adjacent properties within 0.25 mile of the USAR Center property boundaries are reviewed and visually surveyed. For the purposes of this ECP, the adjacent property reconnaissance was performed from the USAR Center property boundaries and from public access points. Historical aerial photographs and topographic maps also were reviewed for conditions or activities that may have had an environmental impact on the Property.

### 4.1 Land Uses

The Property is bounded to the west by Hedges Street and surrounding residential area. To the south and southeast is the Richland New Hope Center that provides social services and houses a vehicle maintenance facility. The New Hope Child Care Center is located to the north, and a public swimming pool is located to the east. Table 1 summarizes the current adjacent properties and zoning.

TABLE 1  
 Adjacent Properties  
 SSG Roy Clifton Scouten USAR Center, Mansfield, Ohio

Name/Type of Property	Address	Distance and Direction from Property	Zoning
Richland New Hope Center	314 Cleveland Avenue	812 feet south and southeast	Commercial
New Hope Child Care Center	Hedges Street	Unknown distance to the north	Unknown
Residential Properties	Hedges Street, Foster Street, Arch Street, and Mason Street	Unknown distances north, south, east, and west	Unknown
Public Swimming Pool	Unknown	Unknown distance north	Unknown

### 4.2 Findings

The EDR database search results were reviewed for any evidence that adjacent properties may have past or present environmental issues that would impact the USAR Center.

The EDR search identified six leaking underground storage tanks (LUSTs) on the Property that were declared as NFA sites; however, it is likely that these six LUSTs are not associated with the Property and instead are located on a nearby property to the southeast and were assigned to this property in error in one of the databases searched. A separate search of the BUSTR database for the Property was conducted and reveals only one closed 500-gallon UST on the Property (Appendix D).

The adjacent property formerly containing six USTs is on an equal elevation with the USAR Center, and because all the tanks are closed with an NFA status, these USTs are assumed to have had no significant impact on the Property.

Water well databases at the federal and state level were reviewed to identify any water supply source near the Property. The state database identified one water supply source located between 0.25 and 0.5 mile from the Property. The well is located west-southwest of the Property and is privately owned.

## 5 Review of Regulatory Information

---

An essential component of an ECP is the review of records and databases containing information on the Property and adjacent properties. The review includes reasonably obtainable federal, state, and local government records, and is intended to identify a release or likely release of any hazardous substance or any petroleum product, which is likely to cause or contribute to a release or threatened release of any hazardous substance or any petroleum product to the Property.

The majority of the regulatory information for this ECP was obtained from EDR on July 12, 2006. EDR provides a regulatory database summary that consolidates standard federal, state, local, and tribal environmental record sources based on ASTM D6008-recommended minimum search distances from the Property.

All findings reported in Sections 5.1, 5.2, and 5.3 below are from the EDR report unless otherwise noted. A copy of the complete EDR report is included in Appendix E.

### 5.1 Federal Environmental Records

#### 5.1.1 Federal National Priorities List Sites within 1 Mile

USEPA maintains a record of the nation's worst uncontrolled or abandoned hazardous waste sites, known as the National Priorities List (NPL). Sites on the NPL undergo long-term remedial action under CERCLA. The USAR Center is not an NPL site, nor were any such sites located within 1 mile of the Property.

#### 5.1.2 Federal CERCLA Information Systems Sites within 0.5 Mile

The CERCLA Information System (CERCLIS) contains data on potentially hazardous waste sites that have been reported to USEPA by state, municipalities, private companies, and private persons, pursuant to Section 103 of the Act. CERCLIS contains sites that either are proposed to be or are on the NPL and sites that are in the screening and assessment phase for possible inclusion on the NPL.

The USAR Center is not a CERCLIS site, and there are no CERCLIS sites located within 0.5 mile of the Property.

#### 5.1.3 Resource Conservation and Recovery Act Corrective Action Sites within 1 Mile

Resource Conservation and Recovery Act (RCRA) corrective action sites (CORRACTS) represent facilities that have generated or managed hazardous wastes and require corrective action. The USAR Center is not a CORRACTS.

Two properties within 1 mile from the USAR Center were identified as CORRACTS. Moritz, Inc. and Mansfield Product Company are located in the anticipated downgradient direction from the USAR Center. Moritz is approximately 3,514 feet northeast of the Property, and

Mansfield Product Company is approximately 3,596 feet north-northeast of the Property. Both facilities are listed as medium corrective action priorities in the EDR report.

#### **5.1.4 RCRA Transport, Treatment, and/or Disposal Sites within 0.5 Mile**

RCRA defines and regulates sites that generate, transport, or provide treatment, storage, or disposal (TSD) of hazardous wastes. The RCRA Information System (RCRIS) includes selective information on these sites. The USAR Center is not an RCRIS TSD site, and there are no such sites located within 0.5 mile of the Property.

#### **5.1.5 Federal RCRA Small and Large Quantity Generators List within 0.25 Mile**

Conditionally exempt small quantity generators are defined as facilities generating less than 100 kg of hazardous waste and less than 1 kg of acutely hazardous waste per month. RCRA small quantity generators are defined as facilities generating between 100 and 1,000 kg of hazardous waste and less than 1 kg of acute hazardous waste per month. A facility generating more than 1,000 kg of hazardous waste or over 1 kg of acutely hazardous waste per month is defined as a large quantity generator.

The USAR Center is listed as a conditionally exempt small quantity generator. No RCRA violations are associated with the Property. No other small quantity generators are located within 0.25 mile from the USAR Center. Additionally, no large quantity generators are located within 0.25 mile of the USAR Center.

#### **5.1.6 Federal Emergency Response Notification System List**

The Federal Emergency Response Notification System List maintains information on reported releases of oil and hazardous substances. The USAR Center is not on this notification list.

### **5.2 State and Local Environmental Records**

Most of the information presented in this subsection was obtained from the EDR report. Additional information also was obtained from online database searches of the Ohio BUSTR. Occasionally, state and local agency personnel were interviewed via telephone to answer questions about any database issues.

#### **5.2.1 State Lists of Hazardous Waste Sites within 1 Mile**

The USAR Center is not on the state list of hazardous waste sites. No adjacent properties within 1 mile of the USAR Center were listed by EDR as being hazardous waste sites.

#### **5.2.2 State-Registered Landfills or Solid Waste Disposal Sites within 0.5 Mile**

The USAR Center does not have a solid waste landfill, incinerator, or transfer station within the Property boundaries. No adjacent properties within 0.5 mile of the USAR Center have a solid waste landfill, incinerator, or transfer station.

### 5.2.3 State-Registered Leaking UST Sites within 0.5 Mile

The USAR Center was noted in the EDR report to have six LUSTs that were declared as NFA sites. The site contact stated that there were no other USTs located on the site, and this listing directly contradicts other information for the Property. Additionally, the BUSTR database was accessed by searching for the facility by address, and the only UST listed for the site is a 500-gallon used oil tank that is closed. No active releases are listed for the site. A copy of the BUSTR database findings is included in Appendix D.

Additionally, within 0.5 mile of the USAR Center, nine LUST sites in various stages of closure were identified apart from the Property. Table 2 summarizes their information relative to the USAR Center and provides the status of their corrective action.

**TABLE 2**  
 Nearby Leaking Underground Storage Tank Sites  
*SSG Roy Clifton Scouten USAR Center, Mansfield, Ohio*

Company/Site	Address	Distance and Direction from Property	Regulatory Status	Elevation Relative to Property
Richland New Hope Center	314 Cleveland Avenue	Approx. 812 feet southeast	NFA	Equal
Attention Center	411 S. Diamond Street	Approx. 827 feet south	Active—With Deficiencies	Equal
Mansfield Cemetery Association	389 Altamont Avenue	Approx. 1,447 feet southwest	NFA	Equal
AP 1943	128 Lexington Avenue	Approx. 2,439 feet west	NFA	27 feet higher
Former Service Station	199 S. Main Street	Approx. 1,877 feet west-northwest	NFA	9 feet lower
BP Oil No. 06544	102 S. Main Street	Approx. 2,392 feet northwest	NFA	74 feet lower
Saltzgaber Drilling Co.	57 S. Franklin Avenue	Approx. 2,399 feet north-northwest	NFA	85 feet lower
Ideal Electric Company	380 E. First Street	Approx. 2,573 feet east-northeast	NFA	115 feet lower
A. Nickles Bakery, Inc.	194 Park Avenue E.	Approx. 2,636 feet north	NFA	110 feet lower

NFA – no further action letter issued

### 5.2.4 State-Registered UST Sites within 0.25 Mile

Based on a review of the EDR report and the state of Ohio’s UST database, no UST sites were identified within 0.25 mile of the USAR Center. The USAR Center was not listed in the state UST database. No UST sites were identified within 0.25 mile of the Property.

### 5.2.5 State Spills Incidents

The USAR Center is not listed on the state petroleum spill list.

## 5.2.6 Records of Contaminated Public Wells

The City of Mansfield Water and Sewer does not own or operate any municipal water supply wells within 0.5 mile of the USAR Center.

## 5.2.7 Voluntary Remediation Program Sites within 0.5 Mile

The USAR Center is not listed in the Ohio Environmental Protection Agency (EPA) Voluntary Action Program (VAP) list. No sites located within 0.5 mile of the Property are listed as being in the Ohio EPA VAP.

## 5.2.8 State-Registered Bulk Fertilizer and Pesticide Storage Facilities within 0.25 Mile

The USAR Center is not registered with the state as a bulk fertilizer and pesticide storage facility. Additionally, no adjacent properties within 0.25 mile are registered as one of these facilities.

## 5.3 Unmapped Sites

Some sites within the databases EDR searches have the same zip code as the USAR Center, but no street address. These sites, known as unmapped or orphan sites, cannot be mapped from the EDR results alone. Additional efforts described herein were made to locate these sites and assess their environmental importance to the USAR Center.

Using the mapping utility provided at [maps.google.com](http://maps.google.com), the locations of the orphan sites were identified and mapped. One site, CLL Technologies, Hartman Division is located within the corresponding ASTM D6008-recommended minimum search distances. An additional site, the John F. Haring site, has the possibility of being located within the corresponding ASTM D6008-recommended minimum search distances. No information on the status of these facilities was available.

## 5.4 Summary of Properties Evaluated to Determine Risk to the Property

To summarize Sections 5.1 through 5.3, nine separate properties, near or adjacent to the USAR Center, were evaluated as potential risk properties to the Property. These adjacent properties evaluated were identified as a result of information obtained during area reconnaissance, interviews, and regulatory database searches and are summarized in Table 3.

Based on an evaluation of available site information and details concerning the properties listed in Table 3, eight of the facilities evaluated exhibit significant environmental conditions that have the probability of adversely affecting the environmental conditions at another site.

The Attention Center, located south of the Property, has an active file with BUSTR. Groundwater flow is to the east-northeast direction. The Attention Center is located 800 feet away from the USAR Center and in a crossgradient direction from the Property. It is unlikely that a hydrocarbon release for the Attention Center will impact the Property.

**TABLE 3**  
 Nearby Potential Risk Properties  
*SSG Roy Clifton Scouten USAR Center, Mansfield, Ohio*

<b>Company/Site</b>	<b>Database</b>	<b>Elevation Relative to Property?</b>	<b>Potential Impact on the Property?</b>
Richland New Hope Center	LUST	Equal	None <sup>a</sup>
Attention Center	LUST	Equal	BUSTR – Active
Mansfield Cemetery Association	LUST	Equal	None <sup>a</sup>
AP 1943	LUST	27 feet higher	None <sup>a</sup>
Former Service Station	LUST	9 feet lower	None <sup>a</sup>
BP Oil No. 06544	LUST	74 feet lower	None <sup>a</sup>
Saltzgaber Drilling Co.	LUST	85 feet lower	None <sup>a</sup>
Ideal Electric Company	LUST	115 feet lower	None <sup>a</sup>
A. Nickles Bakery, Inc.	LUST	110 feet lower	None <sup>a</sup>

<sup>a</sup> – Based on available information obtained during reconnaissance, interviews, and available regulatory information regarding the adjacent property, the adjacent property is considered as no impact to the USAR Center.

LUST – leaking underground storage tank

## 6 Site Investigation and Review of Hazards

---

Findings documented in the following subsections are based on the July 31, 2006, site reconnaissance, a review of available site records, and information obtained from USAR personnel.

### 6.1 USTs/ASTs

No ASTs have historically been located on the Property or are currently located on the Property. One UST associated with this facility was removed in 1998, and a closure assessment report from Harza was submitted to BUSTR in February 1999. It was determined there was no release from the 500-gallon UST (Harza, 1999). BUSTR, in a letter dated June 15, 1999, issued an NFA for the UST closure.

### 6.2 Inventory of Chemicals/Hazardous Substances

Records pertaining to hazardous substances including hazardous materials, chemical bulk storage, petroleum products, hazardous waste, and petroleum waste were reviewed in addition to interviews and the site reconnaissance to develop the inventory for this Property. Hazardous materials were observed in flammable lockers in both the main building and OMS, and in a hazardous material storage shed observed in the MEP area, just north of the OMS building.

Information related to the past use and storage of hazardous substances at the Property was compiled through review of available site records, search of federal and state environmental databases, and interviews with USAR personnel. Available records indicate that chemicals formerly used and stored at the Property were associated with vehicle and facility maintenance activities, and janitorial services. Janitorial chemicals and building maintenance-related products are stored in the designated storage area within the janitorial closet located in the main building. Vehicle maintenance products and small amounts of POL products also were stored within designated areas in the OMS building. Other potentially hazardous materials and POL products would have been stored in the outdoor hazardous material storage shed located north of the OMS building in the MEP area.

### 6.3 Waste Disposal Sites

Available records and interviews did not indicate the practice of onsite waste disposal other than through managed storage and offsite disposal. No waste disposal sites were observed during the site reconnaissance, nor were any signs of past onsite waste disposal (such as stressed vegetation or suspicious depressions in the landscape) observed.

## 6.4 Pits, Sumps, Drywells, and Catch Basins

Available records, interviews, and site observations did not indicate the existence or past existence of any pits, sumps, drywells, or catch basins. As discussed in Section 3.5.7, an OWS was formerly located on the Property as part of the wash rack facility. The OWS and vehicle wash rack were removed in April 2002. There was no evidence of contamination based on visual observation, and this was confirmed by laboratory analysis of soil samples collected during removal activities (Jones Technology, 2004).

## 6.5 Asbestos-containing Material

A site-specific ACM survey was conducted at the USAR Center as part of the 2005 *Environmental Survey Report – Asbestos, PCB, Lead-based Paint, and Radon Survey* by ITI of South Florida. Asbestos-containing floor tiles and mastic in the main building were found to contain asbestos, along with a water storage tank in the mechanical room; thermal pipe insulation and pipe fittings throughout the building; exhaust flue mud in the mechanical room; transite wall board in the men’s bathroom; and joint tape/mud compound throughout the building. The folding divider between Classrooms 1 and 2 was suspected to contain asbestos, but it was not confirmed. No ACM was found in the OMS building. Roofing materials, fire doors, and electrical wiring in both facilities were suspected to contain asbestos, but it was not confirmed.

## 6.6 PCB-containing Equipment

A site-specific PCB survey was conducted at the USAR Center as part of the 2005 *Environmental Survey Report – Asbestos, PCB, Lead-based Paint, and Radon Survey* by ITI of South Florida. During the PCB survey, light ballasts were observed in the OMS building that were labeled as “No PCBs,” and none was noted in the main building. Three pole-mounted transformers were noted on the Property that did not have labeling indicating the absence or presence of PCBs. Ohio Edison owns the three transformers located on the Property. Ohio Edison could not be reached to determine whether or not these transformers are PCB-free. Therefore, it is assumed these transformers contain PCBs.

## 6.7 Lead-based Paint

A site-specific LBP survey was conducted at the USAR Center as part of the 2005 *Environmental Survey Report – Asbestos, PCB, Lead-based Paint, and Radon Survey* by ITI of South Florida. The survey confirmed LBP was found to be on the interior walls of the boiler room and in the men’s bathroom in the main building. In the OMS building, LBP was found on the grey metal doors and on the interior overhead door components.

## 6.8 Radon

A site-specific radon survey was conducted at the USAR Center as part of the 2005 *Environmental Survey Report – Asbestos, PCB, Lead-based Paint, and Radon Survey* by ITI of South Florida. Passive detection equipment was installed throughout the main building and

OMS building to determine levels of radon gas. Based on the sampling results, all sample locations exhibited radon levels above USEPA's recommended maximum allowable exposure level of 4 pCi/L.

## 6.9 Munitions and Explosives of Concern

Based on a review of available records, site reconnaissance, and interviews with USAR Center personnel, there is no indication of the storage, usage, or disposal of munitions and explosives of concern (MEC) at the Property.

## 6.10 Radioactive Materials

Based on a review of available records, site reconnaissance, and interviews with USAR Center personnel, radioactive materials were present in equipment used on the Property, including testing and calibration equipment. According to site interviews, however, there were no known radioactive releases on the Property.

## 7 Review of Special Resources

---

### 7.1 Land Use

The City of Mansfield has designated this Property and surrounding properties as Commercial/Industrial. The site is located in a mixed-used area that combines commercial, industrial, and residential land uses.

### 7.2 Coastal Zone Management

This Property is not included in the coastal zone management plan, nor is it in a coastal zone.

### 7.3 Wetlands

According to the 1988 U.S. Fish and Wildlife Service (USFWS) National Wetlands Inventory maps (Figure 14, Appendix A) and visual observations, no wetlands were observed on the Property or on adjacent properties. The 2005 natural resources survey also confirms that no wetlands occur on the Property.

### 7.4 100-year Floodplain

A review of the Federal Emergency Management Agency (FEMA) digital Flood Hazard Area map indicates that the Property is not within the 100-year floodplain. Figure 15 in Appendix A provides a map of the 100-year floodplain elevations located in the immediate vicinity of the Property.

### 7.5 Natural Resources

A review of the 2005 natural resources survey conducted on the Property indicated that no threatened or endangered plant or animal species, or any habitat critical to their survival, were identified on the Property. The survey further indicated that surface water resources and wetlands do not occur on the Property. Visual observations made during the site reconnaissance confirmed that it is unlikely that threatened or endangered plant or animal species, or any habitat critical to their survival would occur on the Property.

### 7.6 Cultural Resources

The Fort McCoy Archaeological Laboratory prepared a Section 110 cultural resources survey report for the Property for the 88th RRC in December 1998 through December 1999. The purpose of the survey and subsequent report was to inventory all properties controlled or leased by the 88th RRC in Ohio. Historical information, setting and landscape, cultural resources, security, architectural information, and structure descriptions are included for

each property. Each site also was assessed for its eligibility to the NRHP. Appendix D provides a copy of the Section 110 survey report.

## 7.7 Other Special Resources

Ohio has 12 river systems included as components of the State Scenic Rivers Program, totaling 21 individual stream segments. The closest of these rivers is the Mohican River. Richland County has two major drainage basins that include the Black Fork River and the Clear Fork River that feed into the Mohican River. Based on the location of the wild and scenic rivers (WSRs) and historical activities conducted at the USAR Center, no activities conducted at the site would adversely impact any of the designated WSRs.

## 8 Conclusions

---

The following information was obtained after conducting an environmental record search including records for adjacent properties, reviewing available historical information, conducting interviews with knowledgeable parties connected with the Property or with state and local agencies, and conducting a reconnaissance of the Property and adjacent properties.

### 8.1 Review of Findings

**Hazardous Substances.** CERCLA hazardous substances were used and stored at the Property in amounts necessary to support vehicle and building maintenance activities. There is no evidence that the chemicals used or stored were released or disposed of at the Property.

**USTs/ASTs.** No ASTs have historically been located on the Property or are currently located on the Property. A 500-gallon UST was removed in 1999 as part of the removal of the facility wash rack and OWS system. BUSTR issued an NFA letter dated June 15, 1999, for the UST closure.

**Non-UST/AST Petroleum Storage.** During the site reconnaissance, petroleum storage in 55-gallon drums was observed located in a hazardous material storage shed.

**PCBs.** A site-specific PCB survey was conducted at the USAR Center as part of the 2005 *Environmental Survey Report – Asbestos, PCB, Lead-based Paint, and Radon Survey*. During the PCB survey, light ballasts were observed in the OMS building that were labeled as “No PCBs,” and none was noted in the main building. Three pole-mounted transformers were noted on the Property that did not have labeling indicating the absence or presence of PCBs. Ohio Edison owns the three transformers located on the Property. Ohio Edison could not be reached to determine whether or not these transformers are PCB-free. Therefore, it is assumed these transformers contain PCBs.

**ACM.** A site-specific ACM survey was conducted at the USAR Center as part of the 2005 *Environmental Survey Report – Asbestos, PCB, Lead-based Paint, and Radon Survey*. Asbestos-containing floor tiles and mastic in the main building were found to contain asbestos, along with a water storage tank in the mechanical room; thermal pipe insulation and pipe fittings throughout the building; exhaust flue mud in the mechanical room; transite wall board in the men’s bathroom; and joint tape/mud compound throughout the building. The folding divider between Classrooms 1 and 2 was suspected to contain asbestos, but it was not confirmed. No ACM was found in the OMS building. Roofing materials, fire doors, and electrical wiring in both facilities were suspected to contain asbestos, but it was not confirmed.

**LBP.** A site-specific LBP survey was conducted at the USAR Center as part of the 2005 *Environmental Survey Report – Asbestos, PCB, Lead-based Paint, and Radon Survey*. The survey confirmed LBP was found to be on the interior walls of the boiler room and in the men’s

bathroom in the main building. In the OMS building, LBP was found on the grey metal doors and on the interior overhead door components.

**Radiological Materials.** Based on a review of available records, site reconnaissance, and interviews with USAR Center personnel, radioactive materials were present in equipment used on the Property, including testing and calibration equipment. According to site interviews, however, there were no known releases of radiological materials on the Property.

**Radon.** A site-specific radon survey was conducted at the USAR Center as part of the 2005 *Environmental Survey Report – Asbestos, PCB, Lead-based Paint, and Radon Survey*. Passive detection equipment was installed throughout the main building and OMS building to determine levels of radon gas. Based on the sampling results, all sample locations exhibited radon levels above USEPA's recommended maximum allowable exposure level of 4 pCi/L.

**MEC.** Available records do not indicate any MEC currently or formerly located at this Property. No evidence of MEC was observed during the site reconnaissance.

**Surrounding Properties.** Potential environmental sites of concern, located within the ASTM D6008-recommended minimum search distances from the Property, were evaluated through database review and site reconnaissance. None of the adjacent properties evaluated exhibited environmental conditions that had or have the potential to adversely affect environmental conditions at the Property.

**Wetlands and Floodplain.** According to the 1988 USFWS National Wetlands Inventory maps, the 2005 natural resources survey, and visual observations, no wetlands were observed or appear to be associated with any of the facilities at this site, or with any adjacent properties. The Property is not located within a 100-year floodplain or within a coastal zone.

**Threatened and Endangered Species.** A natural resources survey was completed in 2005 for the Property, and no threatened or endangered plant or animal species, or any habitat critical to their survival, were identified on the Property. Visual observations made during site reconnaissance confirmed that it is unlikely that threatened or endangered plant or animal species, or any habitat critical to their survival, would occur on the Property.

**Archaeological and Historical Resources.** Because the site buildings were constructed after 1947, it is not eligible for listing on the NRHP as a World War II or earlier building. Its potential Cold War era historic significance has not been evaluated

## 8.2 Environmental Condition of Property

Findings of this ECP report were based on reasonably available environmental information; interviews with site, state, and local personnel; review of previous environmental studies; and federal and state database and file information related to the storage, release, treatment, or disposal of hazardous substances or petroleum products. Results also were based on visual observations of the Property and adjacent properties.

In accordance with the DoD policy defining the classifications (see Sherri Goodman Memorandum dated 21 October 1996), the Property has been classified into one of seven property types. Based on the results of this ECP study, the Property has been assigned an

overall DoD Environmental Condition Type 1. The Property type is based on the following major findings:

- No recognized environmental conditions were identified on the subject site.
- There is no past evidence that chemicals used or stored at the facility were improperly released or disposed of on the Property.
- No staining or stressed vegetation was noted on the Property.
- None of the adjacent properties evaluated exhibited environmental conditions that had or have the potential to adversely affect environmental conditions at the Property.

MEMORANDUM FOR 88th Regional Support Command (RSC) Facility Managers and Facility Coordinators

SUBJECT: Cultural Resources Survey

1. Please review and file the attached Cultural Resource Survey (Section 110 Survey) in the Cultural Resource Section of your Facility Environmental Files. This is a permanent facility record.
2. The 88<sup>th</sup> Regional Support Command (88<sup>th</sup> RSC) contracted the Fort McCoy Archaeology Laboratory (FMAL) to conduct a historic property inventory, under the provisions of Section 110 of the National Historic Preservation Act (NHPA), of United States Army Reserve Command (USARC) facilities owned or leased by the 88<sup>th</sup> RSC. This survey describes the recordation methods, physical descriptions, evaluation criteria, and the eligibility for nomination to the National Register of Historic Places (NRHP) for this property. Information contained in this survey also includes an explanation of the sources used in preparation of the survey.
3. The exterior of each building, structure, and object located on the USARC facility was photographed. Comprehensive views and unique architectural elements of each building were photographed in 35-mm black and white format and digital format. The 35-mm black and white photos are located at the 88<sup>th</sup> RSC Engineering Directorate. The survey and the digital photos are located on the Engineering public drive.
4. No additional review under the Section 110 of the NHPA is currently recommended at this USARC. Additional review will be required when existing building(s) reach the 50-year eligibility requirement for the NRHP or specific undertakings require compliance with Section 106 of the NHPA.
5. If you have any questions or require additional information, please contact your State Environmental Manager or the Headquarters Environmental Division at (612) 713-3825.

## National Historic Preservation Act of 1966, as Amended

### Section 110

"In accordance with subsection 101(F) of the National Historic Preservation Act, the Secretary of the Interior in consultation with the Advisory Council on Historic Preservation, has developed the following guidelines for carrying out Federal agency responsibilities under Section 110 of the Act...Federal Agencies should follow these guidelines in establishing, monitoring, reviewing, and evaluating their programs for compliance with Section 110 of the Act. State Historic Preservation Officers should refer to these guidelines when providing assistance to Federal agencies under Sections 101(b)(3)(E) and (F) of the Act. The advisory Council on Historic Preservation [Council] will use these guidelines, as applicable, and recommend their use to Federal agencies, State Historic Preservation Officers, and others in agreements executed pursuant to Section 106 of the Act and 36 CFR Part 800. The Council will also use these guidelines in its review of Federal agency programs under Section 202(a)(6) of the Act...*Section 110(a)(1)*: "The heads of all Federal agencies shall assume responsibility for the preservation of historic properties which are owned or controlled by such agency. Prior to acquiring, constructing, or leasing buildings for purposes of carrying out agency responsibilities, each Federal agency shall use, to the maximum of the extent feasible, historic properties available to the agency. Each agency shall undertake, consistent with the preservation of such properties and the mission of the agency and the professional standards pursuant to Section 101(f) any preservation, as may be necessary to carry out this section" *Section 110(a)(2)*: "With the advice of the Secretary and in cooperation with the State Historic Preservation Officer for the State involved, each Federal agency shall establish a program to locate, inventory, and nominate to the Secretary all properties under the agency's ownership or controlled by the agency, that appear to qualify for inclusion on the National Register in accordance with the regulations promulgated under Section 110(a)(2)(A). Each Federal agency shall exercise caution to assure that any such property that might qualify for inclusion is not inadvertently transferred, sold, demolished, substantially altered, or allowed to deteriorate significantly. *Section 110(b)*: "Each Federal agency shall initiate measures to assure that where, as a result of Federal action or assistance carried out by such agency, a historic property is to be substantially altered or demolished, timely steps are taken to make or have made appropriate records, and that such records then be deposited, in accordance with Section 101(a), in the Library of Congress or with such other appropriate agency as may be designated by the Secretary, for future use and reference" *Section 100(c)*: "The head of each Federal Agency shall, unless exempted under Section 214, designate a qualified official to be known as the agency's "preservation officer who shall be responsible for coordinating that agency's activities under the Act. Each Preservation Officer may, in order to be considered qualified, satisfactorily complete and appropriate training program established by the Secretary under Section 110(g)." *Section 100(d)*: "Consistent with the agency's mission and mandates, all Federal agencies shall carry out agency programs and projects (including those under which any Federal assistance is provided for any federal license, permit, or other approval is required) in accordance with the purposes of this Act and, give consideration to programs and projects which will further the purposes of this Act." *Section 110(e)*: "The Secretary shall review and approve the plans for transferees of surplus federally owned historic properties not later than ninety days after his receipt of such plans to ensure that the prehistorical, historical, architectural, or culturally significant values will be preserved or enhanced. *Section 110(f)*: "Prior to the approval of any Federal undertaking which may directly and adversely affected any National Historic Landmark, the head of the responsible Federal agency shall, to the maximum extent possible, undertake such planning and actions as may be necessary to minimize harm to such landmark, and shall afford the Advisory council on Historic Preservation a reasonable opportunity to comment on the undertaking" *Section 110(g)*: "Each Federal agency may include the costs of preservation activities of such agency under this Act as eligible project costs in all undertakings such agency or assisted by such agency. The eligible project costs may also include amounts paid by a federal agency to any state to be used in carrying out, such preservation responsibilities of the federal agency under this Act, and reasonable costs may be charged to Federal licensees and permits as a condition to the issuance of such license or permit." *Section 110(h)*: "The Secretary shall establish an annual preservation awards program under which he may make monetary awards in amounts not to exceed \$1,000 and provide citations for special achievements to officers and employees of Federal, State, and certified local governments in recognition of their outstanding contributions to the preservation of historic resources. Such programs may include the issuance of annual awards by the President of the United States to any citizen of the United States recommended for such award by the Secretary;" *Section 110(i)*: "Nothing in this Act shall be construed to require the preparation of an environmental impact statement where such a statement would not otherwise be required under the National Environmental Policy Act 1969, and nothing in this Act shall be construed to provide exemption from any requirement respecting the preparation of such a statement under such Acts." *Section 110(j)*: "The secretary shall promulgate regulations under which the requirements of this section may be waived in whole or in part in the event of a major natural disaster or an imminent threat to national security."

## Introduction

In 1996, the Fort McCoy Archaeology Laboratory contracted with the 88<sup>th</sup> RSC to conduct a historic properties inventory under the provisions of Section 110 of the NHPA. The inventory included all USARC facilities owned or leased by the 88<sup>th</sup> RSC in the state of Ohio. This report describes the recordation, evaluation methods, and results of the inventory. Additionally, this report documents the sources and informants used to evaluate the actions to nominate properties to the NRHP. Recommendations for NRHP reevaluation are also included.

Preliminary investigations included meetings with officials of the Ohio State Historic Preservation Office (SHPO) and documentary research conducted at the Ohio State Historical Society, regional county courthouses, and local libraries. Oral interviews were conducted with USARC personnel at each facility. The Ohio Archaeological Sites Index, maintained by the Ohio SHPO, was consulted to determine the location of any known archaeological sites located within a one-mile radius of each USARC facility. Fieldwork for the project was conducted during August-November 1997. All Ohio listings in the NRHP were reviewed prior to commencement of fieldwork for the inventory. Those properties on all USARC facilities that met the criteria for NRHP eligibility were examined and recorded to assess their potential for possible nomination to the NRHP.

## Statement of Purpose

The Fort McCoy Archaeology Laboratory Section 110 inventory of the USARC facilities within the state of Ohio was conducted consistent with the *Secretary of the Interior's Standards and Guidelines for Identification and Evaluation (Standards)*.

The primary goal of the NHPA, according to the *Standards*, is to “preserve prehistoric and historic resources throughout the nation for the inspiration and benefit of present and future generations.” In fulfillment of this goal, governmental agencies, within the framework of their missions, are charged with administering federally owned, administered, or controlled prehistoric and historic resources in a spirit of stewardship, and caring for significant prehistoric and historic properties in ways that ensure long-term protection and integrity of those properties.

The *Standards* require agencies to identify, evaluate, and document their historic properties, and nominate them to the NRHP. According to the *Standards*, “identification, evaluation, and documentation of historic properties are critical in the long-term management of historic properties, as well as in program and project specific planning by a federal agency. The *Standards* also require that “the agency manages and maintains its historical properties in ways that preserve the properties historic, archaeological, architectural, or cultural values,” and that “the agency considers historic properties in addition to its own when planning activities that may affect them.” Agencies are also required under the *Standards* to develop “a process that identifies and evaluates historic properties in a timely fashion,” and “a process that develops and implements agreements regarding the means by which adverse affects on historic properties will be considered.” The documentation of historic properties, before they are substantially altered or demolished, and the placement of the documentation in an appropriate repository for future use and research, is also required.

In complying with the requirements of Section 110(a) (2) of the NHPA and the *Standards*, researchers from the Fort McCoy Archaeology Laboratory conferred with the Ohio SHPO regarding previous archaeological

or historical architectural investigations of U.S. Army Reserve Command properties within the State of Ohio. No information on previous archaeological or architectural documentation was found for the USARC facilities in Ohio. Discrepancies between existing documentary files about USAR buildings and structure and on-site recordation conducted by members of the Fort McCoy Archaeology Laboratory are recorded in detail within the individual facility sections of this report. All known archaeological sites within one-mile of the USARC facilities were also identified and documented. Historic themes established by the Ohio SHPO were followed in preparation of the historic context, and in identifying historic properties.

All fieldwork was conducted by Fort McCoy Archaeology Laboratory personnel who meet the *Secretary of Interior's Professional Qualification Standards* at 36 CFR61. The field recordation methods employed in the inventory follow accepted practices within the field of historic research and historic preservation. These included, but were not limited to, on-site evaluation and documentation of historic buildings and properties, review of all pertinent historical documentation of historic buildings and properties, review of all pertinent historical documentation, and interviews with facilities managers regarding the properties. Assessments of potential eligibility for the NRHP were made based upon the field research, on-site documentation and post inventory evaluation.

### **Factors That May Precipitate a Change in Status**

The recommendations contained within this report are based upon the current legal ownership and physical conditions. Changes in the status of these properties may require a reevaluation of the property, or require additional investigations in compliance with Section 106 of the NHPA. Examples of changes that could necessitate a reevaluation of properties include, but are not limited to, demolition, demolition by neglect, construction, rehabilitation, or disposition.

## **Methodology**

Members of the Fort McCoy Archaeology Laboratory conducted a formal literature and record search of each facility. The objective of this search was to establish the historical and archaeological context associated with each USARC. Searches conducted at local historical societies and municipal governments provided additional documentary and cartographic information relevant to the historic context of individual USARC facilities. Research was also conducted at the Ohio SHPO offices to obtain information relative to the location of all recorded archaeological sites within a one mile radius of each USARC facility. All existing archaeological sites were documented and evaluated in terms of their significance to USARC locations. A surface reconnaissance survey was conducted on the land associated with each USARC facility.

### **Architectural Study Methods**

The architectural survey undertaken by members of the Fort McCoy Archaeology Laboratory was conducted using guidelines published by the Historic American Building Survey (HABS) and the Ohio SHPO. Data represented in this report was collected with methods that includes:

- 1) a literature review of the historic documents relating to the construction and maintenance of each building on the USARC facilities;

- 2) an architectural evaluation of the potential eligibility of each building on the USARC facilities;
- 3) a surface reconnaissance of land associated with each USARC facility.

The historic themes used to evaluate the historic contexts associated with the properties analyzed in this inventory were taken directly from the guidelines identified by the Ohio SHPO. The results of the historical, architectural, and surface surveys conducted by members of the Fort McCoy Archaeological Laboratory are described in the following sections of this report.

### **Historical Literature Review**

The methodology for the Ohio Section 110 Inventory was designed to establish a historic context for each USARC facility to assess the potential eligibility of USARC buildings for nomination to the NRHP. In preparation for the documentation of each USARC facility, historic research was conducted by members of the Fort McCoy Archaeology Laboratory and included:

- 1) examination of real property records maintained by the 88th RSC;
- 2) examination of real property records located at each USARC facility (when available);
- 3) an interview with the facility manager at each USARC facility;
- 4) NRHP eligibility nominations filed with the Ohio SHPO (when applicable);
- 5) examination of the Archaeological Sites Index maintained by the Ohio SHPO;
- 6) examination of the historic documents housed at the Ohio State Historical Society, regional county courthouses, and local libraries;
- 7) examination of previous cultural resource, archaeological, architectural, and environmental surveys available about each USARC facility (when available).

### **Architectural Fieldwork**

Historic research of buildings at each USARC facility was conducted to establish an initial database of the architectural styles that would be encountered during on-site documentation. On-site fieldwork consisted of producing in-depth textual descriptions that included:

- 1). Architect/Builder
- 2). Type of building
- 3). Date of construction
- 4). Date of acquisition
- 5). Architectural style

- 6). Foundation material
- 7). Number of bays
- 8). Plan shape
- 9). Wall construction
- 10). Roof type
- 11). Roof materials
- 12). Chimney construction
- 13). Chimney placement
- 14). Type and location of entrances
- 15). Type and location of fenestration
- 16). Relationship of all buildings on the facility
- 17). Integrity of each building
- 18). Potential threat to the buildings
- 19). Future research potential at the facility
- 20). Assessment of the potential eligibility of each building to the NRHP under Criteria A, B, C, and D

Photo documentation captured the exterior of each building at the Ohio USARC facilities, including unique architectural elements. Photos were recorded in 35 mm black and white and Kodak DC 50 digital format. Data collected during on-site documentation and assessments was compiled into the Ohio Section 110 report and entered into USARC databases maintained by the Fort McCoy Archaeology Laboratory.

### **The Ohio Section 110 Inventory Report**

An on-site assessment of the historic, architectural, and archaeological significance was accomplished to determine if buildings and/or districts on each USARC facility were potentially eligible for nomination under Criteria A, B, C, and D to the NRHP. The Ohio Section 110 Inventory is intended to provide the Commander, 88th RSC, with a comprehensive overview of all USARC properties in Ohio. Specifically, this report provides architectural, historic, archaeological, and security information to aid in the management of the physical resources located on USARC facilities owned or leased by the 88th RSC. Data contained in the individual sections of this report were recorded and presented in accordance with standards established by IABS and *the Secretary of the Interior's Guidelines for Section 110 of the NHPA*.<sup>1</sup>

Information included in discussions of individual USARC facilities may be repeated in the introduction and discussion sections. Information contained in the individual USARC facility sections include:

- 1). Facility Identification Number
- 2). Facility Name
- 3). Facility Address
- 4). USGS 7.5 Minute Series Quadrangle Map
- 5). UTM coordinates
- 6). Present Ownership/Occupant
- 7). Setting & Landscape
- 8). Archaeological Resources
- 9). Historical Information
- 10). Architectural Information
- 11). Security

- 12). Building Descriptions
- 13). Eligibility
- 14). Recommendations
- 15). Sources
- 16). Notes

### **National Register Criteria of Evaluation**

Each building on the USARC facilities was assessed for its potential eligibility to the NRHP as defined in 36 CFR Part 60. The criteria used to evaluate the eligibility of properties for potential nomination to the NRHP assesses the significance of each facility in terms of its *contribution to American history, historic persons, architecture, engineering, and archaeological research.* The NRHP criteria and criteria considerations include:

**Criteria:**

- A. That are associated with events that have made a significant contribution to the *broad patterns of our history*; or
- B. That are associated with the lives of persons significant in our past; or
- C. That embody the distinctive characteristics of a type, period, or method of construction or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or
- D. That have yielded, or may be likely to yield, information important in prehistory or history.<sup>2</sup>

**Criteria Considerations:**

- A. A religious property deriving primary significance from architectural or artistic distinction or historical importance; or
- B. A building or structure removed from its original location but which is significant primarily for architectural value, or which is the surviving structure most importantly associated with the historic person or event; or
- C. A birthplace or grave of a historical figure of outstanding importance if there is no other appropriate site or buildings directly associated with his productive life; or
- D. A cemetery which derives its primary significance from graves of persons of transcendent importance, from age, from distinctive

design features, or from association with historic events; or

E. A reconstructed building when accurately executed in a suitable environment and presented in a dignified manner as part of a restoration master plan, and when no other building or structure with the same association has survived; or

F. A property primarily commemorative in intent if design, age, tradition, or symbolic value has invested it with its own historical significance;

G. A property achieving significance within the past 50 years if it is of exceptional importance.<sup>3</sup>

## Historic Background

The European-American history of Ohio spans the past 330 years. During this time the physical character of the state changed from that of a sparsely settled, densely forested land, to a heavily populated state of large urban centers interspersed with small communities and farms. The Ohio Historic Preservation Office's research themes for Cultural Resources Management will be followed in this report.

### History of Ohio

A French explorer, Nicolas Sanson d'Abbeville, mapped Lake Erie as early as 1650<sup>4</sup>. Rene Robert Cavelier Sieur de La Salle is thought to have discovered the Ohio River in 1669. Aside from the major waterways, the area that was to become Ohio was bypassed during the initial wave of French exploration to avoid conflict with the Iroquois Confederacy.<sup>5</sup> The French recognized the economic importance of the region, but were unable to establish effective control over such a vast area.

Beginning in the late 1600s and early 1700s, British explorers and trappers began to enter Ohio from Pennsylvania and Virginia. Both British and French crowns claimed the area; the French by right of discovery and the British by reliance on the traditional venue of royal charters. Competing French and British interests continued until 1752 when open warfare began in 1752. French-Canadians and Indians attacked and destroyed a Miami village with allegiance to Britain near the town of Pickawillany.<sup>6</sup> Although the French tried to maintain a viable national presence in Ohio, the final outcome of the French and Indian War<sup>7</sup> sealed the fate of the region when France abandoned the territory with the Treaty of 1763.

The period of official British control over the area was brief. Following the Treaty of 1763, the British Crown attempted to control trade with various Indian and French groups. The British soon found, however, that they also had a problem with increasing American encroachment into the region, resulting in conflict with the resident Native American tribes. In 1763, the British Crown issued a decree that forbade Americans from settling beyond the Appalachians and like most British decrees, was largely ignored by the American frontiersmen. At the start of the American Revolution, British control of Ohio was tenuous at best. Although large delegations of Native Americans signed a neutrality treaty at Fort Pitt in September 1775, by 1777, cross-border raids had resulted in open conflict between the tribes and American settlers, with the Native Americans increasingly aligned with the British<sup>8</sup>. Ohio was the scene of several skirmishes during the war.

<b>Mansfield, Ohio</b> SSG Roy Clifton Scouten USARC	
<b>Identification Information:</b>	Identification Number: OH037/39895 SSG Roy Clifton Scouten USARC 271 Hedges St., Mansfield, Richland County, Ohio 44903-2697 Telephone Number: (419) 525-1893 Mansfield North Quadrangle, Ohio, USGS 7.5 Minute Series, T21N R18W Section 22 (Figure 364) UTM: Z17, 372641E, 4512148N Present Owner/Occupant: The facility is owned by the United States Government and controlled by the 88th RSC.
<b>Setting and Landscape:</b>	The SSG Roy Clifton Scouten USARC consists of two buildings located on 3.5 acres of land (MN009) in a commercial and residential district of Mansfield, Ohio (Figure 365). <sup>1</sup> The facility is landscaped with grass, trees, and shrubs.
<b>Archaeological Resources:</b>	An archaeological records search at the Ohio State Historic Preservation Office determined that there are no known archaeological sites located within a one-mile radius of the SSG Roy Clifton Scouten USARC.
<b>Historical Information:</b>	The SSG Roy Clifton Scouten USARC was constructed in 1958. <sup>2</sup> There appear to have been no significant additions or alterations to the buildings since their original construction.
<b>Security:</b>	Security measures at the SSG Roy Clifton Scouten USARC include chain-link fencing topped with barbed wire surrounding a military vehicle parking area, the north, east and west sides of the Organizational Maintenance Shop, and a section of the east wall of the Reserve Center's drill hall. High intensity lighting is also present to illuminate the military and civilian parking areas.

<p><b>Architectural Information:</b></p>	<p>The SSG Roy Clifton Scouten USARC consists of two concrete block buildings with red brick veneers. The buildings do not appear to exhibit historical or architectural character or merit that significantly contributes to the historic context of the period associated with their construction.</p>
<p><b>Building Descriptions:</b></p>	<p><b>Reserve Center (MN001)</b></p> <p>The Reserve Center functions as an administrative and drill facility for the SSG Roy Clifton Scouten USARC. Constructed in 1958<sup>3</sup>, it is a multiple-level irregular shaped building consisting of a one-story administration section and a two-story drill hall connected by a one-story, L-shaped enclosed corridor. The structure rests upon a concrete foundation with concrete block walls and a red brick veneer. A pair of metal pedestrian doors with single light fixed windows and three one-over-one double-hung windows with plain slip sills are recessed into the west side of the building (Figures 366 &amp; 367). Additional entrances include single and paired metal pedestrian doors on the south and east walls. A metal overhead retractable bay door is located on the east wall (Figure 368). Fenestrations include a series of one-over-one light double-hung windows with plain slip sills and two light sliding double-hung windows with plain slip sills around the perimeter of the building (Figure 369). A series of one-over-one light fixed and awning ribbon windows with continuous plain slip concrete sills are located on the east side of the drill hall near the roof eaves. Two metal vents are located within the brick veneer on the southeast corner of the building. A flat roof covers the structure (Figure 370).</p> <p><b>Organizational Maintenance Shop (MN011)</b></p> <p>The Organizational Maintenance Shop functions as a vehicle maintenance facility for the SSG Roy Clifton Scouten USARC. Constructed in 1958<sup>4</sup>, it is a one-story rectangular building that rests upon a concrete foundation with concrete block walls and a brick veneer. Two metal overhead retractable bay doors are located on north side of the building (Figure 371). Additional entrances include metal pedestrian with concrete steps are located on the east and west walls (Figures 372 &amp; 373). Fenestrations include a pair of one-over-one light fixed and awning ribbon windows with continuous plain slip concrete sills along the south wall near the roof eaves (Figure 374). A flat roof covers the structure. A concrete ramp is located northeast of the Organization Maintenance Shop and is used for vehicle maintenance activities undertaken at the facility (Figures 375 &amp; 376).</p>

<p><b>Eligibility:</b></p>	<p>None of the buildings located at the SSG Roy Clifton Scouten USARC meet the criteria for the National Register of Historic Places (NRHP), under Criterion A, B, C, or D, and thus are not recommended for nomination to the NRHP. A historic documentary and architectural investigation conducted at the facility determined there is no direct relationship between the facility and prehistoric or historic events in the Mansfield area (criterion A), there is no association with significant persons involved in prehistoric or historic events (criterion B), buildings on the facility are not architecturally or technologically significant (criterion C), and the facility is unlikely to hold future research potential (criterion D).</p>
<p><b>Recommendations:</b></p>	<p>No additional review under Section 110 is recommended until the existing buildings at the SSG Roy Clifton Scouten USARC reach the 50 year eligibility requirement for the NRHP in 2008, or unless specific undertakings require compliance with Section 106 of the National Historic Preservation Act (36 CFR 800).</p>

## Introduction

In 1996, the Fort McCoy Archaeology Laboratory contracted with the 88<sup>th</sup> RSC to conduct a historic properties inventory under the provisions of Section 110 of the NHPA. The inventory included all USARC facilities owned or leased by the 88<sup>th</sup> RSC in the state of Ohio. This report describes the recordation, evaluation methods, and results of the inventory. Additionally, this report documents the sources and informants used to evaluate the actions to nominate properties to the NHRP. Recommendations for NRHP reevaluation are also included.

Preliminary investigations included meetings with officials of the Ohio State Historic Preservation Office (SHPO) and documentary research conducted at the Ohio State Historical Society, regional county court-houses, and local libraries. Oral interviews were conducted with USARC personnel at each facility. The Ohio Archaeological Sites Index, maintained by the Ohio SHPO, was consulted to determine the location of any known archaeological sites located within a one-mile radius of each USARC facility. Fieldwork for the project was conducted during August-November 1997. All Ohio listings in the NRHP were reviewed prior to commencement of fieldwork for the inventory. Those properties on all USARC facilities that met the criteria for NRHP eligibility were examined and recorded to assess their potential for possible nomination to the NRHP.

## Statement of Purpose

The Fort McCoy Archaeology Laboratory Section 110 inventory of the USARC facilities within the state of Ohio was conducted consistent with the *Secretary of the Interior's Standards and Guidelines for Identification and Evaluation (Standards)*.

The primary goal of the NHPA, according to the *Standards*, is to “preserve prehistoric and historic resources throughout the nation for the inspiration and benefit of present and future generations.” In fulfillment of this goal, governmental agencies, within the framework of their missions, are charged with administering federally owned, administered, or controlled prehistoric and historic resources in a spirit of stewardship, and caring for significant prehistoric and historic properties in ways that ensure long-term protection and integrity of those properties.

The *Standards* require agencies to identify, evaluate, and document their historic properties, and nominate them to the NRHP. According to the *Standards*, “identification, evaluation, and documentation of historic properties are critical in the long-term management of historic properties, as well as in program and project specific planning by a federal agency. The *Standards* also require that “the agency manages and maintains its historical properties in ways that preserve the properties historic, archaeological, architectural, or cultural values,” and that “the agency considers historic properties in addition to its own when planning activities that may affect them.” Agencies are also required under the *Standards* to develop “a process that identifies and evaluates historic properties in a timely fashion,” and “a process that develops and implements agreements regarding the means by which adverse affects on historic properties will be considered.” The documentation of historic properties, before they are substantially altered or demolished, and the placement of the documentation in an appropriate repository for future use and research, is also required.

In complying with the requirements of Section 110(a) (2) of the NHPA and the *Standards*, researchers from the Fort McCoy Archaeology Laboratory conferred with the Ohio SHPO regarding previous archaeological

or historical architectural investigations of U.S. Army Reserve Command properties within the State of Ohio. No information on previous archaeological or architectural documentation was found for the USARC facilities in Ohio. Discrepancies between existing documentary files about USAR buildings and structure and on-site recordation conducted by members of the Fort McCoy Archaeology Laboratory are recorded in detail within the individual facility sections of this report. All known archaeological sites within one-mile of the USARC facilities were also identified and documented. Historic themes established by the Ohio SHPO were followed in preparation of the historic context, and in identifying historic properties.

All fieldwork was conducted by Fort McCoy Archaeology Laboratory personnel who meet the *Secretary of Interior's Professional Qualification Standards* at 36 CFR61. The field recordation methods employed in the inventory follow accepted practices within the field of historic research and historic preservation. These included, but were not limited to, on-site evaluation and documentation of historic buildings and properties, review of all pertinent historical documentation of historic buildings and properties, review of all pertinent historical documentation, and interviews with facilities managers regarding the properties. Assessments of potential eligibility for the NRHP were made based upon the field research, on-site documentation and post inventory evaluation.

### **Factors That May Precipitate a Change in Status**

The recommendations contained within this report are based upon the current legal ownership and physical conditions. Changes in the status of these properties may require a reevaluation of the property, or require additional investigations in compliance with Section 106 of the NHPA. Examples of changes that could necessitate a reevaluation of properties include, but are not limited to, demolition, demolition by neglect, construction, rehabilitation, or disposition.

### **Methodology**

Members of the Fort McCoy Archaeology Laboratory conducted a formal literature and record search of each facility. The objective of this search was to establish the historical and archaeological context associated with each USARC. Searches conducted at local historical societies and municipal governments provided additional documentary and cartographic information relevant to the historic context of individual USARC facilities. Research was also conducted at the Ohio SHPO offices to obtain information relative to the location of all recorded archaeological sites within a one mile radius of each USARC facility. All existing archaeological sites were documented and evaluated in terms of their significance to USARC locations. A surface reconnaissance survey was conducted on the land associated with each USARC facility.

### **Architectural Study Methods**

The architectural survey undertaken by members of the Fort McCoy Archaeology Laboratory was conducted using guidelines published by the Historic American Building Survey (HABS) and the Ohio SHPO. Data represented in this report was collected with methods that includes:

- 1) a literature review of the historic documents relating to the construction and maintenance of each building on the USARC facilities;

- 2) an architectural evaluation of the potential eligibility of each building on the USARC facilities;
- 3) a surface reconnaissance of land associated with each USARC facility.

The historic themes used to evaluate the historic contexts associated with the properties analyzed in this inventory were taken directly from the guidelines identified by the Ohio SHPO. The results of the historical, architectural, and surface surveys conducted by members of the Fort McCoy Archaeological Laboratory are described in the following sections of this report.

### **Historical Literature Review**

The methodology for the Ohio Section 110 Inventory was designed to establish a historic context for each USARC facility to assess the potential eligibility of USARC buildings for nomination to the NRHP. In preparation for the documentation of each USARC facility, historic research was conducted by members of the Fort McCoy Archaeology Laboratory and included:

- 1) examination of real property records maintained by the 88th RSC;
- 2) examination of real property records located at each USARC facility (when available);
- 3) an interview with the facility manager at each USARC facility;
- 4) NRHP eligibility nominations filed with the Ohio SHPO (when applicable);
- 5) examination of the Archaeological Sites Index maintained by the Ohio SHPO;
- 6) examination of the historic documents housed at the Ohio State Historical Society, regional county courthouses, and local libraries;
- 7) examination of previous cultural resource, archaeological, architectural, and environmental surveys available about each USARC facility (when available).

### **Architectural Fieldwork**

Historic research of buildings at each USARC facility was conducted to establish an initial database of the architectural styles that would be encountered during on-site documentation. On-site fieldwork consisted of producing in-depth textual descriptions that included:

- 1). Architect/Builder
- 2). Type of building
- 3). Date of construction
- 4). Date of acquisition
- 5). Architectural style

- 6). Foundation material

### **National Register Criteria of Evaluation**

Each building on the USARC facilities was assessed for its potential eligibility to the NRHP as defined in 36 CFR Part 60. The criteria used to evaluate the eligibility of properties for potential nomination to the NRHP assesses the significance of each facility in terms of its contribution to American history, historic persons, architecture, engineering, and archaeological research. The NRHP criteria and criteria considerations include:

Criteria:

- A. That are associated with events that have made a significant contribution to the broad patterns of our history; or
- B. That are associated with the lives of persons significant in our past; or
- C. That embody the distinctive characteristics of a type, period, or method of construction or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or
- D. That have yielded, or may be likely to yield, information important in prehistory or history.<sup>2</sup>

Criteria Considerations:

- A. A religious property deriving primary significance from architectural or artistic distinction or historical importance; or
- B. A building or structure removed from its original location but which is significant primarily for architectural value, or which is the surviving structure most importantly associated with the historic person or event; or
- C. A birthplace or grave of a historical figure of outstanding importance if there is no other appropriate site or buildings directly associated with his productive life; or
- D. A cemetery which derives its primary significance from graves of persons of transcendent importance, from age, from distinctive

design features, or from association with historic events; or

E. A reconstructed building when accurately executed in a suitable environment and presented in a dignified manner as part of a restoration master plan, and when no other building or structure with the same association has survived; or

F. A property primarily commemorative in intent if design, age, tradition, or symbolic value has invested it with its own historical significance;

G. A property achieving significance within the past 50 years if it is of exceptional importance.<sup>3</sup>

## **Historic Background**

The European-American history of Ohio spans the past 330 years. During this time the physical character of the state changed from that of a sparsely settled, densely forested land, to a heavily populated state of large urban centers interspersed with small communities and farms. The Ohio Historic Preservation Office's research themes for Cultural Resources Management will be followed in this report.

### **History of Ohio**

A French explorer, Nicolas Sanson d'Abbeville, mapped Lake Erie as early as 1650<sup>4</sup>. Rene Robert Cavalier Sieur de La Salle is thought to have discovered the Ohio River in 1669. Aside from the major waterways, the area that was to become Ohio was bypassed during the initial wave of French exploration to avoid conflict with the Iroquois Confederacy.<sup>5</sup> The French recognized the economic importance of the region, but were unable to establish effective control over such a vast area.

Beginning in the late 1600s and early 1700s, British explorers and trappers began to enter Ohio from Pennsylvania and Virginia. Both British and French crowns claimed the area; the French by right of discovery and the British by reliance on the traditional venue of royal charters. Competing French and British interests continued until 1752 when open warfare began in 1752. French-Canadians and Indians attacked and destroyed a Miami village with allegiance to Britain near the town of Pickawillany.<sup>6</sup> Although the French tried to maintain a viable national presence in Ohio, the final outcome of the French and Indian War<sup>7</sup> sealed the fate of the region when France abandoned the territory with the Treaty of 1763.

The period of official British control over the area was brief. Following the Treaty of 1763, the British Crown attempted to control trade with various Indian and French groups. The British soon found, however, that they also had a problem with increasing American encroachment into the region, resulting in conflict with the resident Native American tribes. In 1763, the British Crown issued a decree that forbade Americans from settling beyond the Appalachians and like most British decrees, was largely ignored by the American frontiersmen. Ohio was the scene of several skirmishes during the war.

<b>Mansfield, Ohio</b> SSG Roy Clifton Scouten USARC	
<b>Identification Information:</b>	Identification Number: OH037/39895 SSG Roy Clifton Scouten USARC 271 Hedges St., Mansfield, Richland County, Ohio 44903-2697 Telephone Number: (419) 525-1893 Mansfield North Quadrangle, Ohio, USGS 7.5 Minute Series, T21N R18W Section 22 (Figure 364) UTM: Z17, 372641E, 4512148N Present Owner/Occupant: The facility is owned by the United States Government and controlled by the 88th RSC.
<b>Setting and Landscape:</b>	The SSG Roy Clifton Scouten USARC consists of two buildings located on 3.5 acres of land (MN009) in a commercial and residential district of Mansfield, Ohio (Figure 365). <sup>1</sup> The facility is landscaped with grass, trees, and shrubs.
<b>Archaeological Resources:</b>	An archaeological records search at the Ohio State Historic Preservation Office determined that there are no known archaeological sites located within a one-mile radius of the SSG Roy Clifton Scouten USARC.
<b>Historical Information:</b>	The SSG Roy Clifton Scouten USARC was constructed in 1958. <sup>2</sup> There appear to have been no significant additions or alterations to the buildings since their original construction.
<b>Security:</b>	Security measures at the SSG Roy Clifton Scouten USARC include chain-link fencing topped with barbed wire surrounding a military vehicle parking area, the north, east and west sides of the Organizational Maintenance Shop, and a section of the east wall of the Reserve Center's drill hall. High intensity lighting is also present to illuminate the military and civilian parking areas.

<p><b>Architectural Information:</b></p>	<p>The SSG Roy Clifton Scouten USARC consists of two concrete block buildings with red brick veneers. The buildings do not appear to exhibit historical or architectural character or merit that significantly contributes to the historic context of the period associated with their construction.</p>
<p><b>Building Descriptions:</b></p>	<p><b>Reserve Center (MN001)</b></p> <p>The Reserve Center functions as an administrative and drill facility for the SSG Roy Clifton Scouten USARC. Constructed in 1958<sup>1</sup>, it is a multiple-level irregular shaped building consisting of a one-story administration section and a two-story drill hall connected by a one-story, L-shaped enclosed corridor. The structure rests upon a concrete foundation with concrete block walls and a red brick veneer. A pair of metal pedestrian doors with single light fixed windows and three one-over-one double-hung windows with plain slip sills are recessed into the west side of the building (Figures 366 &amp; 367). Additional entrances include single and paired metal pedestrian doors on the south and east walls. A metal overhead retractable bay door is located on the east wall (Figure 368). Fenestrations include a series of one-over-one light double-hung windows with plain slip sills and two light sliding double-hung windows with plain slip sills around the perimeter of the building (Figure 369). A series of one-over-one light fixed and awning ribbon windows with continuous plain slip concrete sills are located on the east side of the drill hall near the roof eaves. Two metal vents are located within the brick veneer on the southeast corner of the building. A flat roof covers the structure (Figure 370).</p> <p><b>Organizational Maintenance Shop (MN011)</b></p> <p>The Organizational Maintenance Shop functions as a vehicle maintenance facility for the SSG Roy Clifton Scouten USARC. Constructed in 1958<sup>1</sup>, it is a one-story rectangular building that rests upon a concrete foundation with concrete block walls and a brick veneer. Two metal overhead retractable bay doors are located on north side of the building (Figure 371). Additional entrances include metal pedestrian with concrete steps are located on the east and west walls (Figures 372 &amp; 373). Fenestrations include a pair of one-over-one light fixed and awning ribbon windows with continuous plain slip concrete sills along the south wall near the roof eaves (Figure 374). A flat roof covers the structure. A concrete ramp is located northeast of the Organization Maintenance Shop and is used for vehicle maintenance activities undertaken at the facility (Figures 375 &amp; 376).</p>

<p><b>Eligibility:</b></p>	<p>None of the buildings located at the SSG Roy Clifton Scouten USARC meet the criteria for the National Register of Historic Places (NRHP), under Criterion A, B, C, or D, and thus are not recommended for nomination to the NRHP. A historic documentary and architectural investigation conducted at the facility determined there is no direct relationship between the facility and prehistoric or historic events in the Mansfield area (criterion A), there is no association with significant persons involved in prehistoric or historic events (criterion B), buildings on the facility are not architecturally or technologically significant (criterion C), and the facility is unlikely to hold future research potential (criterion D).</p>
<p><b>Recommendations:</b></p>	<p>No additional review under Section 110 is recommended until the existing buildings at the SSG Roy Clifton Scouten USARC reach the 50 year eligibility requirement for the NRHP in 2008, or unless specific undertakings require compliance with Section 106 of the National Historic Preservation Act (36 CFR 800).</p>

March 1998.</p>
<p><b>Notes:</b></p>	<p><sup>1</sup> “Environmental Assessment for Construction of a New Reserve Center at Mansfield, Ohio.” Fort Knox Engineering and Housing Division, Fort Knox, Kentucky, July 1986, p. 2. and “Real Property Detail report Criteria: Total Inventory,” 88<sup>th</sup> RSC DSCEN Real Estate Division, March 1998, p. 24. A construction proposal by members of the Fort Knox Engineering and Housing Division state that 3.55 acres of land are associated with the SSG Roy Clifton Scouten USARC. However, records maintained by the 88<sup>th</sup> RSC DSCEN Real Estate Division state that 3 acres of land are</p>

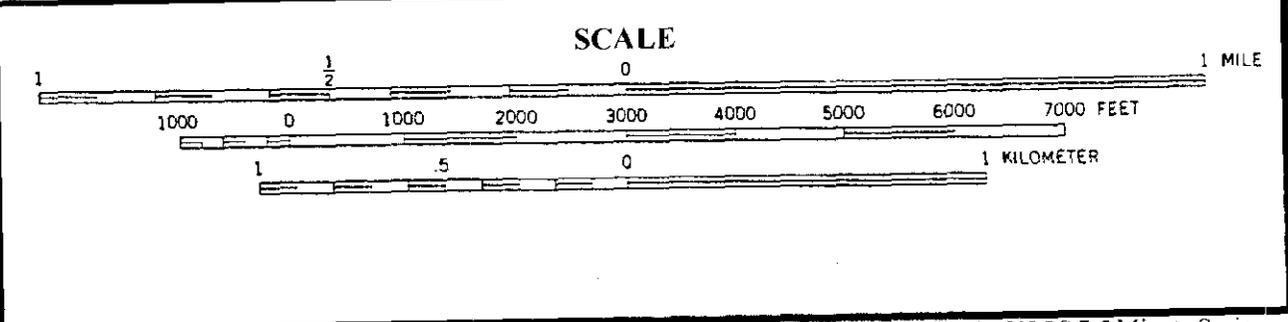

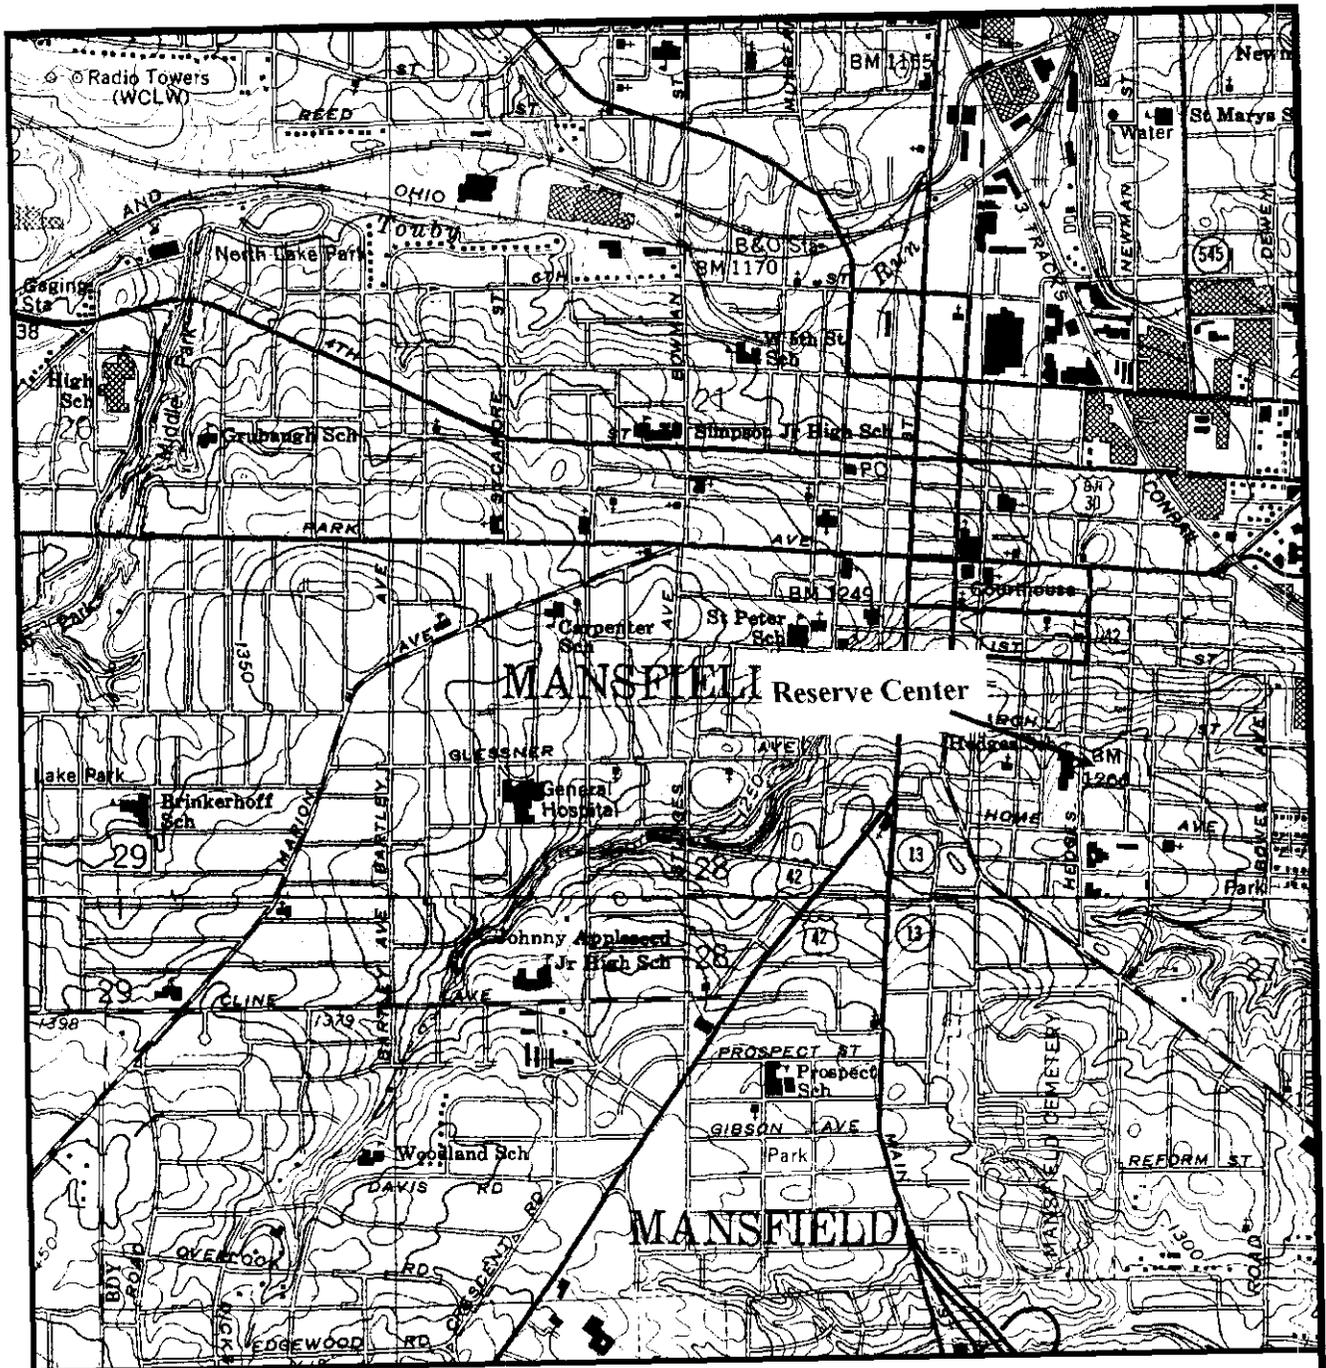

associated with the SSG Roy Clifton Scouten USARC. Fort McCoy Archaeology Laboratory investigators theorize that that size of the parcel of land at the facility is most likely 3.55 acres. Copies of the above reports are on file at the 88<sup>th</sup> RSC DSCEN Real Estate Division, Fort Snelling, Minnesota.

<sup>2</sup> "Dedication Plaque," SSG Roy Clifton Scouten USARC, 1958. The dedication plaque located in the foyer of the Reserve Center on the SSG Roy Clifton Scouten USARC states the facility was dedicated to the memory of SSG Roy Scouten in 1958. Fort McCoy Archaeology Laboratory investigators theorize that the buildings at the facility were completed the same year as the dedication.

ENVIRONMENTAL COMPLIANCE ASSESSMENT

INSTALLATION NAME: SCOUTEN USARC  
INSTALLATION NUMBER: OH037  
INSTALLATION LOCATION: MANSFIELD, OH

DATE ASSESSMENT COMPLETED: 8 March 1996

ENVIRONMENTAL COMPLIANCE EXECUTIVE SUMMARY

1. Scouten USAR Center is a 14,000 square feet, 100 man facility with a detached two bay Organizational Maintenance Shop (OMS). The surrounding area includes a school, small business and residential dwellings. The facility is on a well traveled street with access to a state highway approximately 1/2 mile to the south.

2. The Environmental Compliance Assessment notes four items which require action. Proper disposal and clean up of a waste oil tank and completion of radon testing will require outside assistance. Diversion of vehicle wash water through the oil water separator should be considered and is included in RPMA Project Documentation.

The city of Mansfield has included Scouten Center in the Industrial Waste Monitoring Program. Regular monitoring of sanitary discharges in the city will be required in the next two years. A testing program is currently being developed. The facility should comply with city guidelines under normal operations. It is not expected that compliance will require a significant expenditure.

3. The facility manager and tenant unit are aware of environmental regulations and making good faith effort to comply. Additional emphasis on housekeeping will assist compliance efforts. Unit training was not observed during the assessment.

**i. EXECUTIVE SUMMARY**

This study was undertaken by request of the Louisville Corp. of Engineers and the 88th Support Command. The purpose of the study was to survey the USARC sites in the state of Ohio, to locate and identify the occurrences of cross-connection protection code violations and make the appropriate backflow prevention device recommendations to correct these deficiencies.

The majority of the sites in the scope of work should have additional cross-connection protection. The most common need is protection for hose bibbs and wall hydrants. The recommendation for these devices is an inexpensive add-on that attaches to the device. Another common deficiency is the make-up water connections to the mechanical systems, many of these connections are unprotected in many buildings. A Reduced Pressure Principle Backflow Preventer is recommended in those cases. All existing devices as well as those recommended should be tested every year and some specific models should be cleaned or rebuilt at regular intervals. The records of the inspections should be maintained yearly and a copy sent to the water provider.

The most serious violation of all the sites was at the Fort Hayes USARC. In building 116 there is a water meter pit that contains an 8" incoming water line from Cleveland Avenue which serves as the main water source for what was once the entire Fort Hayes complex. The meter pit also has a 12" diameter sump about 2' deep in the floor with an eductor ( a non-electrically operated sump pump). The water supply to operate the eductor's float control was connected (hard piped) with a 1" diameter galvanized pipe threaded into the 8" water main down stream of the two water meters. The eductor's discharge line was directly connected into what appears to be an 8" hub and spigot sanitary or storm sewer line running north and south thru the meter pit. This is a severe cross-connection problem without any backflow protection device to protect the city of Columbus' water supply, or the downstream connected consumers and needs immediate attention.

The applicable codes for each of the sites in the study were obtained and are located in Chapter 6, "OHIO CROSS-CONNECTIONS AND BACKFLOW PREVENTION CODES." This chapter the includes national, state and local water supplier regulations that apply. Each facility was inspected and the potential cross-connection violations were identified.

Diagrams for each facility were included in Chapter 4, "OHIO RESERVE SITES", indicating the location of the potential cross-connection locations requiring inspections and/or backflow prevention devices. Diagrams distinguish between where devices are required by regulation and where they are recommended by the Corps of Engineers. Recommendations for the type of backflow prevention device that should be installed at each specific location where required to meet state and local regulations are located on the diagrams. A cost estimate for purchasing and installing each device is also included in the chapter.

A summary table of the location, model number, cleaning schedule, rebuilding schedule of the existing backflow prevention devices was listed in Chapter 5, "SUMMARY OF EXISTING BACKFLOW PREVENTERS." Ohio EPA's sample forms for inspection of existing backflow preventers were included in Chapter 3, "CROSS-CONNECTION/BACKFLOW PREVENTION PROGRAM." A database is included, showing facility, facility id number, building number, address, water provider, point of contact at the water provider in charge of backflow compliance, the contact's phone number, the units, type, model number, date of installation, date of last inspection, inspection frequency, and room for additional notes per site. The database is in Chapter 8, "DATABASE OF BACKFLOW DEVICES AT EACH FACILITY".

**ii. INTRODUCTION**

This study was undertaken at the request of Gary Meden of the Louisville District of the US Army Corps of Engineers, Geotechnical and Environmental Engineering Branch, and Mike Gretchen of the 88th Regional Support Command (RSC).

The purpose of this study is to establish a cross-connection/backflow prevention program for 29 military reserve centers in Ohio. The intent is to prevent any significant risk to human health from potential backflow from the facilities into the public water supply and to conform to State and Local regulations pertaining to cross-connections and backflow prevention devices.

Dodson-Stilson wishes to thank the Corps of Engineers and the 88th Regional Support Command for the privilege of assisting them in this survey. We would be glad to provide further services as the need arises.

## 1.0 CODE REQUIREMENTS

There are three categories of codes pertaining to cross-connections and backflow: national, state, and local. The national standards are manufacturer's standards and ASSE (The American Society of Sanitary Engineers). Manufacturer's standards are developed from years of experience, and have been adopted as guidelines for the industry. The state codes in Ohio are the OBBC (The Ohio Basic Building Code) and OEPA (The Ohio Environmental Protection Agency). The local communities that have regulations in addition to the state codes are the cities of Akron, Bryan, Canton, Cleveland, Columbus, Marietta, Springfield, Warren, Zanesville, and Montgomery and Warren Counties. In some cases, the local communities did not adopt any addition regulations in addition to the national and state codes.

Dodson-Stilson contacted the water provider for every site to obtain the codes for each area. The persons in charge of compliance with the backflow and cross-connection regulations, and a phone number where they can be reached are listed in the database of Chapter 8 "DATABASE OF BACKFLOW DEVICES AT EACH FACILITY". Any standards beyond the Ohio EPA's standard are listed in Chapter 6 "OHIO CROSS-CONNECTION AND BACKFLOW CODES" of this report.

The American Society of Sanitary Engineers has published a standard which is referenced by most of the codes. It sets minimum requirements for meeting certain classifications of protection. The Ohio Basic Building Code, sometimes referred to as the Administrative Code, is a code that should be followed for the types of buildings surveyed for this study. It lists a few guidelines that should be observed, but is not as extensive as the OEPA regulations. The Ohio Environmental Protection Agency has published a guideline which should be followed for all backflow preventers in the State of Ohio. The rules for what type of device should be used in each case, the procedures for testing, the frequency of testing and how to deal with special cases are listed. Chapter 6 "LISTING OF CODES" contains the requirements of these codes.

## 2.0 INSPECTION OF THE FACILITIES

Two teams were formed to go throughout the state and investigate each of the sites. Both teams were led by design engineers fully knowledgeable of the cross-connection and backflow prevention codes in Ohio. Each team included a CAD (Computer Aided Drafting) technician to assist in site inspections and do the necessary drafting on the sites surveyed.

The procedure the teams used while inspecting each site was as follows:

After arriving at the site, the facilities representative was contacted. A sketch of the general layout of the building was made for reference of collected information. All observed cross-connection and backflow situations were recorded. The cross-connections were found at plumbing fixtures or connections to mechanical systems located throughout the building in rooms such as, but not limited to, kitchens, toilet rooms and boiler rooms. Existing backflow preventers and their locations were also noted. Any hose-bibbs or wall hydrants, their locations and whether or not they were protected from back siphonage were also noted.

### 3.0 CROSS-CONNECTION/BACKFLOW PREVENTION PROGRAM

Proper protection against backflow and back-siphonage is important for the health of the inhabitants of the building as well as the general public. It is the joint responsibility of the regulatory agencies, the water provider, and the water consumer to keep the water supply clean. For the water consumer, the responsibilities in the cross-connection/backflow prevention program are as follows:

The water consumer should have periodic surveys made of the water system to determine if there are any cross-connections. Then check to see if they are protected, or can be eliminated. All plumbing regulations should be followed concerning the potable water system. The consumer is responsible for maintaining all backflow prevention devices in proper working order and for reporting to the water supplier the testing and maintenance records.

The Ohio EPA states minimum time intervals for testing of the different types of backflow prevention devices. The higher degree of hazard involved, the more frequent the inspections should occur. More frequent inspections than the minimum mentioned by the Ohio EPA should be done for higher hazard situations. The minimum testing for air gaps, Double Check Valve Backflow Preventers, Reduced Pressure Principle Backflow Preventers, and Atmospheric Vacuum Breakers is once a year. Double Check Valve Backflow Preventers need to be cleaned at least every 30 months. Reduced Pressure Principle Backflow Preventers need to be rebuilt at least every 5 years. All inspections should be performed by a registered plumber who certified to do inspections. All cross-connection protection devices should either be rebuilt or replaced immediately if they do not pass the inspections.

The cost to have a Double Check Valve Backflow Preventer or Reduced Pressure Backflow Preventer tested varies with the size and location. For example a 3/4" Reduced Pressure Principle Backflow Preventer inspection would cost approximately \$90 to \$100 in 1997 dollars, but could cost more in cities with more stringent inspector certification requirements, or where the inspector would need to travel further to get to the site. The cost to test an air gap would be much less, because it only takes a simple visual inspection, and filling out of paper work. Typical costs for the cleaning of a Double Check Valve Backflow Preventer are approximately \$180 for a 2", and \$300 for a 4", both figures in 1997 dollars. The rebuilding of a 3/4" Reduced Pressure Principle Backflow Preventer could range from \$100 to \$250 in 1997 dollars depending on the condition of the device. A cost for travel and setup for the registered plumber must also be considered and would vary on location. Travel time for a typical plumber is usually around \$50/hr. in 1997 dollars. Chapter 4, "OHIO RESERVE SITES" contains cost estimates for each type of cross-connection or backflow device required at the various sites.

On the following pages are sample forms from the Ohio EPA for inspections:

**SUGGESTED FORM**  
**Report on Inspection, Tests and Maintenance**

**VACUUM BREAKERS**

Type of Device Mfg. Model Serial No. Size	Location of Device	Ht. Above Highest Outlet	External Inspection	Initial Test (psi)		Internal Inspection	Cleaned	Repaired	Final Test (psi)	
				Air Inlet Opening	Check Valve Diff.				Air Inlet Opening	Check Valve Diff.

Inspector \_\_\_\_\_ Cert. Tester No. \_\_\_\_\_ Date \_\_\_\_\_

## **1 EXECUTIVE SUMMARY**

The 88<sup>th</sup> Regional Support Command Office of Environmental Management ensures that all Army Reserve mission activities are in compliance with applicable federal, state, local, and Department of Defense environmental laws, procedures, and regulations. This responsibility must be carried forth in a way that will enhance adequate combat training and related mission support, while ensuring sound environmental management.

The continued growth of federal and state environmental laws and regulations has resulted in increased Operations and Maintenance (O&M) responsibility for the Army Reserve over the past 25 years, effectively reducing the available funds to support troop missions and training. Regulatory oversight and changing rule interpretations have added to the burden. In addition, the threat of notice of violation, fine, and civil and/or criminal penalty is a constant concern to military personnel. To address these demands, every effort is being made to produce a reasonable balance among operational support, training requirements, and environmental regulations.

### **1.1 Project Description**

The 88<sup>th</sup> Regional Support Command, Ohio Customer Support Team requested Jones Technologies, Inc. (JTI) to identify and document each oil/water separator located at Army Reserve facilities throughout Ohio. The separators were installed to support organizational level maintenance activities or area maintenance support activities. Installation dates of the separators varies. Some of the devices were installed at the time of facility construction, while others were added to a facility as requirements for pollution control devices changed. The oil/water separators are used to prevent the discharge of petroleum, oil, and lubricants during maintenance or vehicle washing activities to storm water sewer system, sanitary sewer system, or directly to surface water bodies.

With this tasking, JTI reviewed site plans and utility plans of the facility to identify to the greatest extent possible, storm drainage systems on site as well as any municipal storm system and sanitary system connections. If information regarding municipal storm and/or sanitary system connections was not available on existing plans, JTI contacted the local sewer authority to confirm connections to municipal storm or sanitary sewers.

During the site visit, JTI conducted a survey of the entire property to identify floor drains and storm drains, all associated pretreatment systems such as oil/water separators, grease traps, running traps, grit chambers, or acid neutralizing sumps. In addition, the location of the discharge point for each of the floor drains and storm drains was identified. The data collection phase was performed in accordance with the United States Army Reserve Command's "Floor Drain/Storm Drain Data Gathering Protocol" dated June 1997. The primary objective of this protocol is to ensure that data on floor drains and storm drains at United States Army Reserve facilities are gathered in a consistent, uniform manner and format.

Finally, JTI entered the information required for all sanitary and stormwater discharges, associated pretreatment systems, and inlets into the Geographic Army Reserve Information System Attribute Data Module (GADMOD) computer program.

## 1.2 Summary of Status

Jones Technologies, Inc. visited 42 U.S. Army Reserve facilities located throughout Ohio from October 22, 1997 to January 15, 1998. Oil/water separator systems were present at 26 of the 42 U.S. Army Reserve facilities. An oil/water separator system includes a source drain, oil/water separator and discharge point. Accessory features of an oil/water separator system may include a control valve and holding tank to provide flexibility with the system. Table 1-1 provides an overview of the oil/water separator systems at the U.S. Army Reserve facilities.

The configuration, components and condition of the existing oil/water separator systems vary across the state. The source drains for the oil/water separators included vehicle wash facilities, grease racks, and maintenance shops. These drains may be present at either exterior or interior locations. Storm water is an additional consideration when the source drain is at an exterior location.

Nine of the 26 facilities with oil/water separators have a manually operated control valve. In theory, a soldier is to "open" the control valve prior to washing a vehicle at the wash facility. This would allow for oily water to be diverted through an oil/water separator prior to being discharged to the municipal sanitary sewer system. After the vehicle washing activity is completed, the soldier is to "close" the control valve. In this position, the valve would divert any storm water to the storm water sewer system. JTI determined only 22% (2 of the 9) control valve were functioning properly. Most of the control valves could not be turned to the "closed" position. The practice of diverting storm water through an oil/water separator may appear as a safety precaution, however, most of the oil/water separator's located at the U.S. Army Reserve facilities are not designed to handle the excess amount of water.

Six of the 26 oil/water separator systems have a holding tank (i.e. underground storage tank) to provide extra storage capacity for the separator. All six of the holding tanks are approximately 500 gallons in capacity. According to the Ohio Bureau of Underground Storage Tank Regulations (OAC 1301:7-9-02 (52)), these holding tanks meet the definition of an underground storage tank and subject regulations for annual registration, upgrade, and/or release detection.

For 23 of the 26 oil/water separator systems, the discharge points consist of municipal sanitary sewer systems. The wastewater treatment plant will treat the effluent from the oil/water separator systems. Local entities may have enforceable wastewater discharge limitations that regulate discharges to treatment plants. Local limitations often include pH, temperature, and concentrations of various organic and inorganic compounds. Major industrial operations, including the U.S. Army Reserve, which discharge to an offsite treatment plant will be subjected to pretreatment permits issued by the treatment plant, state, or federal agencies.

NO (1) - OWS system out of compliance due to UST

NO (2) - OWS system out of compliance due to discharge

Cooney USARC (Milan) and AMSA #59 (Kings Mills) have a package sewage treatment plant, infiltration gallery, and chlorinator on-site to treat the sanitary sewage, including the effluent from the oil/water separator system. The oil/water separator system at AMSA #3 (Canal Fulton) discharges directly to an open ditch. A National Pollutant Discharge Elimination System (NPDES) permit needs to be obtained for the three aforementioned facilities. A NPDES permit is granted to a direct discharger who permits wastewater discharge to a watercourse in accordance with the conditions of the permit (40 CFR 403.3(1)).

### **1.3 Recommendations**

A summary of the recommendations and alternatives for the oil/water separator systems is included in Table 1-2. Specific cost information listed Table 1-2 is provided in Attachment A. Jones Technologies contacted several manufacturers of oil/water separators. A copy of their product brochures are included Attachment B.

## **2 REGULATORY ASPECTS**

At the Federal level, oil/water separator operation can be affected by the Clean Water Act, Oil Pollution Act, and possibly by Resource Conservation and Recovery Act.

### **2.1 Clean Water Act**

The Clean Water Act (CWA) governs the disposal of wastewater. Authorized State agencies use CWA water quality criteria to develop site-specific permits for the discharge of wastewater to surface water bodies. General pretreatment standards have been developed under the CWA which apply to the discharge of wastewater through Publicly Owned Treatment Works (POTW) and National Pollutant Discharge Elimination System (NPDES) permitted outfalls. The CWA requires POTWs to develop local limits for discharges of nondomestic wastewater to the POTW.

The NPDES permit for wastewater discharge dictates the waste stream sampling protocol. The sampling protocol includes sampling point locations, sampling frequency, sampling parameters, and minimum and maximum concentrations for each outfall. For oil/water separators discharging to a storm drain, a NPDES permit requires periodic sampling to prevent excessive emission to the storm drain. A separate industrial waste permit is typically required for each oil/water separator.

Regulations implementing major portions of the CWA affecting oil/water separators are found in Title 40 Code of Federal Regulations (CFR) Parts 104-149 (Water Programs) and Parts 401-471 (Effluent Guidelines and Standards).

## **2.2 Oil Pollution Act**

The Oil Pollution Act (OPA) establishes liability for removal costs and damages for those parties responsible for a vessel or facility from which oil is discharged, or which poses the substantial threat of discharge of oil, into or upon navigable waters or adjoining shorelines or the exclusive economic zone.

Regulations implementing portions of the OPA which could affect oil/water separators include Title 40 CFR Part 110, "Discharge of Oil," and Part 112, "Oil Pollution Prevention." Title 40 CFR Part 112 establishes requirements for the preparation and implementation of Spill Prevention Control and Countermeasure Plans.

## **2.3 Resource Conservation and Recovery Act**

The Resource Conservation and Recovery Act (RCRA) establishes the requirements to regulate and control the generation, treatment, storage, transportation, and disposal of solid and hazardous wastes. RCRA also establishes requirements to regulate underground storage tanks containing certain substances, including oil and hazardous wastes. RCRA can have serious impacts on use of oil/water separators in several ways.

Underground oil/water separators and/or their holding tanks can be designated as regulated underground storage tanks due to the oil contained in holding reservoirs or tanks. This can impose stringent controls and management and reporting requirements under Title 40 CFR Part 280, "Technical Standards and Corrective Action Requirements for Owners and Operators of Underground Storage Tanks (UST)," which include physical requirements such as double walls or linings, leak detection devices, and monitoring wells.

Oil/water separator sludge and oils can become contaminated with solvents, halogens, and/or metals if improperly used. A leaking oil/water separator containing these hazardous wastes can result in designation as a solid waste management unit and be subject to corrective actions under RCRA regulations found in Title 40 CFR Subpart F, "Releases from Solid Waste Management Units." Corrective actions generate numerous investigative and potential cleanup requirements, not to mention possible notices of violation.

## **2.4 State and Local**

State and local regulatory activities may have additional requirements more stringent than Federal levels.

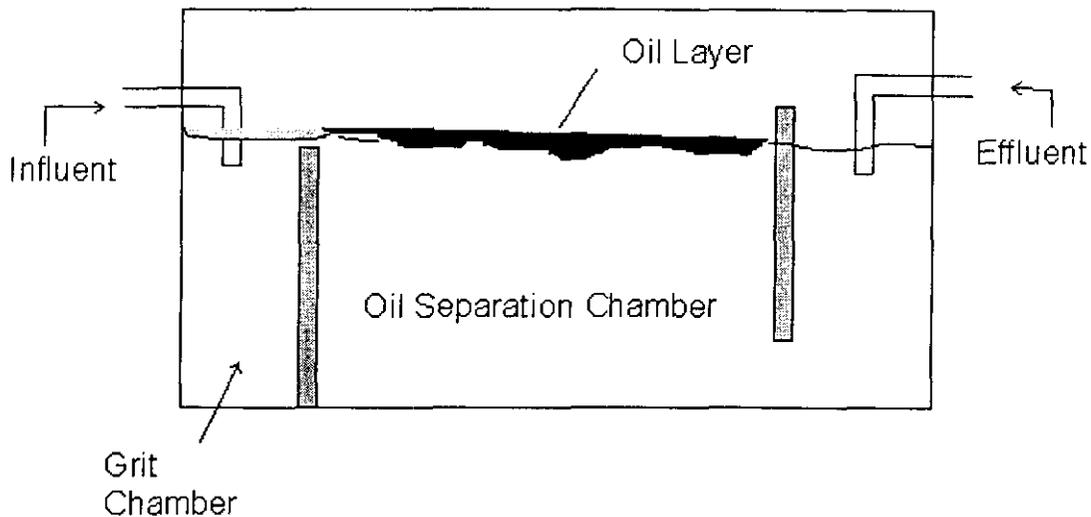

# **3 OVERVIEW OF OIL/WATER SEPARATOR SYSTEMS**

Oil/water separators are devices commonly used as a method to separate oily waste products from wastewater streams. They are typically installed in industrial and maintenance areas to receive and separate oils at low concentrations from wastewater generated during industrial processes such as vehicle maintenance and washing. However, oil/water separators are not

automatic insurance that will guarantee oils will not enter a storm water drainage system or sanitary sewer system. Oil/water separators are not designed to separate high concentrations of oil such as from a spill or pouring waste oil down the drain.

### 3.1 Operation of an Oil/Water Separator

Oil/water separators use several techniques, depending on the type and application or intended use of the separation system. The performance of these systems is based primarily on the relatively low solubility of petroleum products in water and the difference between the specific gravity of water and the specific gravity of petroleum compounds. Gravity oil/water separators are not designed to separate other products such as solvents, detergents, or metals. The illustration below represents a very simple example of the separation phases in a gravity oil/water separator.

**Figure 3-1:** Oily wastewater influent is introduced to the inlet of the separator. The first baffle stabilizes water turbulence and solids are settled and accumulated as sludge in the bottom of the separator. As the wastewater flows to the second chamber located at the center of the separator, oil droplets rise to the top of the water and are prevented from exiting by a second baffle. Thus, as illustrated, solid sludge heavier than water can be collected and oil droplets lighter than water can be accumulated on top of the wastewater and routed to a holding chamber or tank

## **3.2 Factors Affecting Oil/Water Separator Performance**

The basic operation of an oil/water separator is simple; however, many factors will have direct effects on its efficiency. The following elements have a direct impact on the efficiency, use, and management of oil/water separators:

### ***3.2.1 Frequency and Intensity***

The longer the residence time of the waste stream in the oil/water separator, the more efficient it will be at separating oil. Contaminated water enters a receiving chamber of the separator where the flow rate of the wastewater is reduced allowing heavy solids to settle while larger oil droplets float to the top of the compartment. Further separation continues in the separation chamber where smaller droplets of oil separate from the water and join the larger droplets previously separated. The oil layer, which has accumulated on the top of the water spills over an oil skimmer into a holding area and the wastewater then, flows, or is pumped, to the storm water or sanitary sewer system. A longer separation time increases the efficiency of the oil/water separator by allowing a greater amount of oil to rise to the top of the wastewater. Therefore, decreasing the wastewater flow rate through the separator will increase the efficiency of the separator.

### ***3.2.2 Design Capacity***

An oil/water separator has a finite capacity for storage of oils and sludge accumulated during its operation. Quite often the oil/water separator holding compartments can become saturated or full, allowing contamination to flow freely into the wastewater effluent exiting the separator system. Ensuring the separator capacity meets the needs of the process will aid separation efficiency.

### ***3.2.3 Emulsifying Agents***

Detergents and soaps designed to remove oily grime from dirty weapon systems, vehicles, or other components can adversely affect oil/water separator operation. These agents are designed to increase solvency of oily grime in water. Hence, the oil droplets take longer to separate from water reducing separation efficiency. Overzealous use of detergents can degrade efficiency by completely emulsifying oil in the wastewater stream, thus allowing it to pass through the oil/water separator unaffected.

### ***3.2.4 Periodic Maintenance Practices***

Sludge and oils, which are not periodically pumped from separator holding tanks, can render it inoperative. Additionally, leaks from oil/water separators can result in environmental pollution, which can potentially require investigative studies and extensive cleanup. A periodic maintenance plan can prevent contaminated discharges from the oil/water separator system.

### ***3.2.5 Type of Oil/Water Separator System***

An oil/water separator designed and installed for a past mission requirement may not be suitable for present maintenance operations. These units are susceptible to unnoticed abuse by maintenance activities. A wash rack with an oil/water separator designed to capture contaminants from a small vehicle will not handle larger wastewater volumes from a larger vehicle. Additionally, mission changes can result in changes in the effluent characteristics of

the wastewater being discharged to an oil/water separator (i.e., wastewater with solvents or emulsification versus oil). Mission conversions can necessitate modification of storm water/wastewater drainage systems. Oil/water separators not having a storm water diversion system that allows storm water to be diverted from the separation system can also impair efficiency.

### **3.2.6 Contaminants Contained in the Wastewater Stream**

Heavy metals and dirt in the wastewater will settle into the sludge at the bottom of the oil/water separator receiving compartments. The sludge could be regulated as a hazardous waste if levels exceed Resource Conservation and Recovery Act (RCRA) or State hazardous waste levels. Solvents or fuels may also be retained in oil/water separator sludge.

## **4 EXPLANATION OF STATUS REPORTS**

Jones Technologies, Inc. has prepared a "Status Report" for each of the Army Reserve facilities with oil/water separators. Each report details the condition of the oil/water separator, provides recommendations concerning the continued operation of the separator. In addition, at least one photograph of the discharge location (if an outfall to a surface water body) and a computer-generated diagram of each oil/water separator with respect to its location on the facility and the connections to the system. The diagrams were completed utilizing the nomenclature guidelines set forth by the Tri-Services Commission. Building, floor drain, storm drain, sanitary lines, storm water lines, associated pretreatment systems, and discharges were identified in accordance with the United States Army Reserve Command's "Floor Drain/Storm Drain Data Gathering Protocol" dated June 1997.

The following is a brief explanation of the sections in each of the Status Reports located in Attachment C. When appropriate, JTI used the same terminology as the database support software (see Section 5).

### **4.1 Facility**

The name and address of the facility is listed.

### **4.2 Location of Oil/Water Separator**

A brief narrative description is provided including where the oil/water separator is located at the site and how it can be identified at the surface.

### **4.3 Source Drains**

This section is a brief narrative description of the floor and/or storm drains that supply the oily water to the separator. If the drain is located at a vehicle wash facility or inside a maintenance shop, it is also noted in this section.

#### **4.3.1 Potential Contaminants**

This is a narrative description of the types of contaminants that could potentially enter the drain based upon the proximity of the contaminant and the design of the inlet. Typical potential contaminants include: antifreeze; battery acid; degreasing solvents; diesel fuel; fuel oil; gasoline; hazardous waste; petroleum, oil, and lubricants; unknown; and waste oil.

#### **4.4 Discharge**

This section is a narrative description describing the discharge location of the oil/water separator system, which includes the source drain, control valve, and the separator. If a system had a control valve, the discharge of the source drain and oil/water separator is discussed. However, field verification of the discharge was not always possible due to several factors: malfunctioning control valves, excess silt in source drain, and broken buried lines. JTI has noted where these difficulties were encountered.

#### **4.5 Oil/Water Separator Data**

This is information specific about the oil/water separator.

##### **4.5.1 Status**

Based on a database support software picklist. Options include: blocked, currently in use, potentially operational, and removed from service.

##### **4.5.2 Size**

Provides the physical dimensions (in feet) of the oil/water separator, including the depth.

##### **4.5.3 Total Capacity**

Provides the total volume (in gallons) of the oil/water separator.

##### **4.5.4 Oil Storage Capacity**

Provides the volume (in gallons) of oil the oil/water separator or oil holding tank is capable of storing.

##### **4.5.5 Construction Materials**

Based on a database support software picklist. Options include: steel, wood, PVC. A few reports have "concrete" listed since no units are currently assigned to the facility. This description will have to be added to the database support software.

##### **4.5.6 Condition**

Based on a database support software picklist. Options include: good condition, needs maintenance, and fair condition.

##### **4.5.7 Level of Use**

Based on a database support software picklist. Options include: daily, weekly, monthly. A few reports have "never" listed since no units are currently assigned to the facility.

#### **4.5.8 Maintenance Schedule**

Provides information regarding the current level of liquid in the oil/water separator and the date of last cleaning, if known.

#### **4.5.9 Control Valve**

A brief narrative description of the control valve, if present.

#### **4.5.10 Oil Holding Tank**

A brief narrative description of the oil holding tank, if present.

### **4.6 Regulatory Compliance Status**

Based on a database support software picklist. Options include: could not be determined, in compliance, out of compliance, and potentially out of compliance. Regulatory citations are provided in this section if the oil/water separator system is out of compliance and potentially out of compliance.

### **4.7 Recommendations**

Jones Technologies, Inc. has provided a list of actions required to make the oil/water separator system function properly or to bring the system into compliance. Additional discussion of the recommendations is located in Section 1.3 of this report.

### **4.8 Alternatives**

Several alternatives that may be implemented to upgrade the operations of the oil/water separator are described. Additional discussion of the alternatives is located in Section 1.3 of this report.

## **5 DATABASE SUPPORT**

Geographic Army Reserve Information System (GARIS) is an information management tool for the environmental and facilities management of, and master planning for, Army Reserve facilities. GARIS Attribute Data Module (GADMOD) is a data/metadata entry application that provides for direct input of the floor drain/storm drain survey results into database tables for subsequent upload to the host database system.

At the request of the 88<sup>th</sup> Regional Support Command, Ohio Customer Support Team, JTI used GADMOD to capture field data in an electronic format. A large number of data elements (i.e. floor drains, storm drains, associated pretreatment systems, and discharge points) are selected from "picklists" so that a minimal amount of keying in is necessary. Data entry screens for capturing metadata (i.e. data about the data) are also included in GADMOD. To simplify entry, metadata fields are divided into five categories: common, facility specific, source, field survey, and graphic. A copy of the GADMOD User Guide is included Attachment D.

## Oil/Water Separator Evaluation

**Facility:** SSG Roy C. Scoutin USARC (FAC ID: OH037)  
217 Hedges Street  
Mansfield, OH 44903-2697

**Location of Oil/Water Separator (OWS):** The oil/water separator is located in the military equipment parking area on the east side of the maintenance shop. The oil/water separator is identified at the surface by a rectangular manhole cover. An underground storage tank is located just west of the OWS (See Photo 1). The UST is connected to the OWS and collects the excess oil once it has been separated.

**Source Drain(s):** The oil/water separator is connected to a drain located outside at the vehicle wash facility.

*Potential Contaminants:* The potential contaminants would include oil and grease from vehicle washing.

**Discharge:** A two-way control valve determines the discharge flow from the drain at the vehicle wash facility (See Photo 2). When the valve is in the "open" position the drain empties into the oil/water separator prior to discharging to the city sanitary sewer system. The facility connection to the sanitary system is under the entrance road before turning west toward Hedges Street.

When the valve is in the "closed" position the drain empties into the catch basin in the middle of the military equipment parking prior to being discharged to the city storm water sewer system.

At the time of the site visit, the drain only discharged to the city storm water sewer system due to a malfunctioning control valve.

### **Oil/Water Separator Data:**

*Status:* Potentially operational.

*Size:* 2'6" x 2'6" x 5' in depth.

*Total Capacity:* 230 gallons.

*Oil Storage Capacity:* 500 gallons (underground storage tank).

*Construction Materials:* Steel (See Photo 3).

*Condition:* Needs maintenance.

*Level of Use:* Monthly.

*Maintenance Schedule:* Date of last clean out was March 5, 1995. During the site visit Jones Technologies, Inc. determined the underground storage tank is approximately 100% (500 gallons) full of liquid.

*Control Valve:* A control valve allows the discharge from the drain to be directed to either the city storm sewer system or the oil/water separator prior to the city sanitary sewer system. The control valve is currently not operational. Jones Technologies, Inc. performed a field test of the OWS confirmed the malfunctioning valve. Water is discharged to the storm water sewer system when the valve is in the "open" and "closed" positions.

*Oil Holding Tank:* The oil is transferred to a 500-gallon underground storage tank (See Photo 4). Additional information regarding the construction and installation of the underground storage tank was not obtainable during the site visit.

**Regulatory Compliance Status:** Potentially out of compliance. Jones Technologies, Inc. was unable to obtain specific information regarding the underground storage tank.

The following Ohio Underground Storage Tank Regulations need to be met for the underground storage tank to be considered in compliance.

- OAC 1301:7-9-04(B)(1) requires all underground storage tanks containing petroleum or other regulated substances to be registered with the State Fire Marshal annually, no later than the first day of July.
- OAC 1301:7-9-06(C)(1) requires owners and operators of all existing petroleum UST systems shall, on or before December 22, 1998, must replace, upgrade, or close substandard UST systems.
- OAC 1307:7-9(C)(1) requires facilities that have petroleum UST systems must provide release detection meeting specific requirements.

**Recommendations:** The following is a list of actions required to make to oil/water separator system function properly or to bring the system into compliance.

- The control valve should be repaired/replaced for the oil/water system to function as designed (\$4,500).
- The underground storage tank should be registered with the Ohio State Fire Marshal (\$320).

- An underground storage tank release detection program (such as manual tank gauging) including documentation should be initiated (\$2,750).
- The contents (water, oil, and solid debris) of the oil/water separator should be removed. Water should be added to the oil/water separator via the source drains until a normal water level is established in the oil/water separator (\$1,500).

**Alternatives:** The following is a list of alternatives that may be implemented to upgrade the operations.

- Remove the existing oil/water separator, underground storage tank, and control valve and replace with a new grit trap connected to sanitary sewer system (\$10,250).
- Remove the existing oil/water separator and replace it with a new oil/water separator (\$20,500).
- Remove the vehicle wash facility, oil/water separator, underground storage tank, and control valve. Unit vehicle washing could be performed at a local commercial vehicle wash facility (\$7,500).

**Photographs:**

RE: NO FURTHER ACTION STATUS REGARDING CLOSURE REQUIREMENTS

Dear Sir/Madam:

The Bureau of Underground Storage Tank Regulations (BUSTR) has reviewed all information submitted for this incident number. Based on this information, BUSTR requires no further action involving closure under Ohio Administrative Code 1301:7-9-12.

Thank you for your cooperation. If you have any questions, please contact our office at (614) 752-7938.

Sincerely,

A handwritten signature in black ink, appearing to read "Kelly Gill".

Kelly Gill

SSG Roy Clifton Scouten USARC, Mansfield, OH  
Supplemental Information for UST Closure Reports

Dear Mr. Gill:

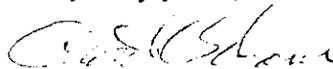

A few months ago, a UST Closure Report was submitted for the above-referenced facility. At that time, manifests for disposal of UST contents and waste oil sludge were not available. However, Mr. Tim Lutz of BUSTR indicated that the report should be submitted at that time and the manifests should be forwarded later. The required manifests and analytical results are enclosed now. Please attach these to the referenced Closure Report and issue a final closure certification for this tank.

Please direct written correspondence to:

Mr. Kurt Zacharias  
Environmental Protection Specialist  
Commander, 88<sup>th</sup> RSC  
506 Roeder Circle  
Fort Snelling, MN 55111-4009

If you have questions about the enclosed information please call me at 312-831-3215.

Very truly yours,

David C. Scharre  
Project Manager

## CLOSURE FORM (PART I)

### CLOSURE CHECKLIST

OWNERSHIP OF TANKS	LOCATION OF TANKS
<p>OWNER NO. 11394            US ARMY RESERVE            506 ROEDER CIRCLE            FORT SNELLING, MN 55111-4009</p>	<p>PERMIT NO. 08175            FACILITY NO. 702643            SSG ROY CLIFTON SCOUTEN USARC            271 HEDGES STREET            MANSFIELD, OH 44903</p>

#### FILING INSTRUCTIONS

1. IN THE COLUMN ON THE LEFT SIDE OF THE FORM, PLACE EITHER THE PAGE NUMBER OR APPENDIX DESIGNATION WHERE EACH ITEM ON THE CHECKLIST CAN BE FOUND IN THE CLOSURE REPORT OR "N/A" (NOT APPLICABLE) FOR ITEMS THAT DO NOT APPLY TO YOUR CLOSURE REPORT.
2. UST OWNER MUST SIGN WHERE INDICATED AT THE END OF THIS FORM AND ATTACH IT TO THE CLOSURE REPORT. DEFICIENT CLOSURE REPORTS SUBMITTED TO OUR OFFICE WILL BE RETURNED TO THE UST OWNER FOR COMPLETION. SEND THE CLOSURE FORM AND THE CLOSURE REPORT TO THE ATTENTION OF THE "CLOSURE REVIEW SECTION".

**NOTE:** UST OWNER/OPERATORS SHALL SUBMIT ONE COPY OF THE WRITTEN CLOSURE REPORT WHICH SHALL BE RECEIVED BY THE STATE FIRE MARSHAL WITHIN 45 DAYS OF RECEIPT BY THE UST OWNER/OPERATOR OF SOIL AND/OR GROUND WATER LABORATORY ANALYSIS BUT NOT LATER THAN 90 DAYS FROM THE DATE OF COLLECTING SOIL AND/OR GROUND WATER SAMPLES.

#### I. UST SYSTEM OWNER, OPERATOR, AND FACILITY DATA

- 2.1 UST OWNER (NAME; ADDRESS; ZIP CODE; COUNTY; PHONE NO.)
- 2.1 UST OPERATOR (NAME; ADDRESS; ZIP CODE; COUNTY; PHONE NO.)
- 2.2 UST FACILITY LOCATION (NAME; ADDRESS; ZIP CODE; COUNTY; PHONE NO.)
- 2.2 UST FACILITY OWNER (NAME; ADDRESS; ZIP CODE; COUNTY; PHONE NO.)

#### II. UST SYSTEM DATA

- 2.9 DATE OF UST REMOVAL OR ABANDONMENT
- N/A UST SYSTEM AGE (YEARS)
- 1.0 UST CAPACITY (GALLONS)
- 1.0 UST SYSTEM CONSTRUCTION (E.G., STEEL, FIBERGLASS, ETC.)
- N/A DATE UST SYSTEM LAST USED
- N/A PERSON WHO LAST USED UST SYSTEM
- 1.0 SUBSTANCE STORED IN UST BOTH PAST AND PRESENT (E.G. GASOLINE, DIESEL FUEL, USED OIL, ETC.)
- 1.0 UST SYSTEM USE (E.G. RETAIL SALES, RESIDENTIAL, FARM, BUSINESS, ETC.)
- 1.0 UST SYSTEM STATUS (PERMANENTLY REMOVED, ABANDONED-IN-PLACE, CHANGE-IN-SERVICE, OR TEMPORARY CLOSURE BEYOND TWELVE MONTHS)

#### III. WASTE DISPOSAL DATA

- 5.3 DISPOSAL OF UST SYSTEM
- 5.2 DISPOSAL AND FINAL LOCATION OF ANY LIQUIDS FROM UST SYSTEM OR UST SYSTEM EXCAVATION

IV. SAMPLING DATA

(GROUND WATER SAMPLING DATA ONLY REQUIRED IF GROUND WATER ENCOUNTERED DURING CLOSURE ACTIVITIES)

- 4.2 SOIL AND/OR GROUND WATER SAMPLE COLLECTION PROCEDURES
- 4.2 TYPE OF SAMPLE CONTAINERS AND SAMPLE PRESERVATION TECHNIQUES USED FOR SOIL AND/OR GROUND WATER SAMPLES
- 4.1 LABELING NUMBER OR DESIGNATION OF SOIL AND/OR GROUND WATER SAMPLE USED
- 4.1 TYPE OF SAMPLING EQUIPMENT USED (E.G. SPLIT SPOON, SHELBY TUBE, ETC.)
- 4.2 PROCEDURES USED FOR DECONTAMINATION OF SAMPLING EQUIPMENT
- 4.1 FIELD SCREENING METHODOLOGY USED FOR EACH SOIL AND/OR GROUND WATER SAMPLES OBTAINED
- 3.6 TYPE OF FIELD SCREENING INSTRUMENT USED
- V LISTING OF FIELD SCREENING READINGS FOR EACH SOIL AND/OR GROUND WATER SAMPLE OBTAINED
- V CALIBRATION DATE OF FIELD SCREENING INSTRUMENT
- 4.1 LOCATIONS AND DEPTHS OF ALL SOIL AND/OR GROUND WATER SAMPLES OBTAINED
- VIII COPY OF CHAIN OF CUSTODY DOCUMENTATION FOR SOIL AND/OR GROUND WATER SAMPLES SUBMITTED TO LABORATORY
- VIII SAMPLE COLLECTOR NAME AND COMPANY AFFILIATION

V. LABORATORY DATA

(GROUND WATER LABORATORY DATA ONLY REQUIRED IF GROUND WATER ENCOUNTERED DURING CLOSURE ACTIVITIES)

- VIII COPIES OF LABORATORY SAMPLE ANALYSIS DATA SHEETS FOR SOIL AND/OR GROUND WATER SAMPLES
- VIII DATE SOIL AND/OR GROUND WATER SAMPLES COLLECTED
- VIII DATE SOIL AND/OR GROUND WATER SAMPLES RECEIVED BY LABORATORY
- VIII DATE SOIL AND/OR GROUND WATER SAMPLES ANALYZED BY LABORATORY AND TYPE OF MATRIX ANALYZED (SOIL OR WATER)
- VIII NAME, ADDRESS, AND PHONE NUMBER OF LABORATORY AND NAME OF SAMPLE ANALYST
- VIII ANALYTICAL TEST METHODS USED FOR SOIL AND/OR GROUND WATER SAMPLES
- VIII DETECTION/QUANTITATION LIMITS USED FOR LABORATORY TEST METHODS
- N/A DATE OF LABORATORY INSTRUMENT CALIBRATION

VI. MISCELLANEOUS DATA

- 3.0 VISUAL SITE EVALUATION
- V1 SITE MAP ACCURATELY DEPICTING DIMENSIONS OF FACILITY PROPERTY BOUNDARIES, ABOVE GROUND STRUCTURES, ADJACENT STREET LOCATIONS, AND UST SYSTEMS (NUMBER OF TANKS AND PRODUCT LINES)
- N/A MAPPED LOCATIONS OF KNOWN PRIVATE WELLS, PUBLIC WATER WELLS, OR MONITORING WELLS ON FACILITY
- V1 MAPPED LOCATIONS OF ANY UTILITIES EXPOSED DURING UST SYSTEM EXCAVATION
- 3.1 DESCRIPTION OF NATIVE SOILS ENCOUNTERED DURING UST SYSTEM EXCAVATION (E.G. SAND, GRAVEL, CLAY, ETC.)
- 4.1 MAPPED DEPTHS AND LOCATIONS OF ALL SOIL AND/OR GROUND WATER SAMPLES TAKEN FROM EXCAVATION
- V1 MAPPED LOCATION OF UST RECENTLY OR HISTORICALLY REMOVED, ABANDONED-IN-PLACE, OR HAS UNDERGONE A CHANGE IN SERVICE, OR TEMPORARY CLOSURE BEYOND TWELVE MONTHS
- N/A MAPPED LOCATIONS OF OTHER UST STILL IN SERVICE
- V1 MAPPED LENGTH OF UST AND PRODUCT LINE
- V1 MAPPED EXCAVATION LIMITS
- 2.6 CERTIFIED FIRE SAFETY INSPECTOR NAME AND CERTIFICATE NUMBER
- N/A LOCAL FIRE DEPARTMENT (NAME; ADDRESS; ZIP CODE; COUNTY; PHONE)
- I COPY OF 30 DAY CLOSURE NOTIFICATION AND CLOSURE PERMIT

## CLOSURE FORM (PART II)

## CLOSURE FORM (PART III)

### SOIL DISPOSAL/TREATMENT REQUIREMENTS

Please provide the page number or appendix designation where the following items may be found in the closure report:

- 45 Calculated stockpile volume in cubic yards
- 5.1 Description of stockpile storage and staging (e.g., bermed, covered, etc.)
- 4.2 Stockpile sampling and field screening procedures, locations, dates, and results
- VIII Stockpile laboratory reports and chain of custody form

In order to comply with the reporting requirements of OAC 1301:7-9-16, please refer to the Soil Disposal/Treatment Notification Form on the following page. The first page of the Soil Disposal/Treatment Notification Form should be completed for each stockpile generated. The second page of the Soil Disposal/Treatment Notification Form should be completed if the PCS is to be treated at a designated facility.

Please consolidate the Soil Disposal/Treatment Notification Form and related PCS information in a separate section of the closure report. The State Fire Marshal is required to track and manage all information derived from PCS generated in compliance with OAC 1301:7-9-16. Consolidating the PCS information in a separate section of the closure report will facilitate a faster review of the site file.

## CLOSURE FORM (PART IV)

### CLOSURE FORM CERTIFICATION STATEMENT

The following certification statement must be completed by the UST owner/operator. The notarized written statement found at the end of the Soil Disposal/Treatment Notification Form must also be completed if the PCS is to be treated.

*I certify that I have personally examined and that I am familiar with the information submitted in this form, and based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the submitted information is true, accurate, and complete.*

# **Closure Assessment Report Waste Oil Underground Storage Tank SSG Roy Clifton Scouten USARC Facility Mansfield, OH**

## **1.0 Introduction**

The Omaha District, US Army Corps of Engineers (USACE) contracted with Harza Environmental Services, Inc. (Harza) to conduct the permanent closure of a number of underground storage tank (UST) systems at various 88th Regional Support Command (RSC) facilities located in five states. The scope of work at SSG Roy Clifton Scouten US Army Reserve Center (USARC) facility (site) included the permanent closure by removal of a 550-gallon (gal) Waste Oil double-wall fiberglass UST located at the site. The Waste Oil UST was registered with the Bureau of Underground Storage Tank Regulations (BUSTR), Division of State Fire Marshall, Ohio Department of Commerce.

The site consists of a Main Building containing office, training and storage facilities, an OMS (Organization Maintenance Shop) Building containing vehicle maintenance bays, offices, and storage, paved outdoor parking areas, and open grassy areas, as presented in the Site Plan figure in Appendix V. The OWS is located east of the OMS Building and the UST was located west of the OWS system. A sewer drains to the OWS from the vehicle maintenance bays inside the OMS Building. A sewer also drains to the OWS from a sand trap in an outside vehicle wash rack located east of the OWS system. The OWS discharges to a sanitary sewer. According to the facility manager, the OWS is used primarily for vehicle and equipment cleanup. The OWS is seldom used at this facility.

The Waste Oil UST was part of an Oil/Water Separator (OWS) system. Waste oil, collected after washing vehicles, drained into an OWS (Baffle type) where the oil and water were separated by gravity and flotation. The oil, floating on top of water, flowed through a sloped steel pipe into a separate UST. This UST held the waste oil collected after each wash. This Waste Oil UST was removed as part of the closure activities. The outlet of the OWS system was plugged and the OWS remained in the ground for future operations.

The permanent removal of the UST and the sample collections were done according to the Ohio Administrative Code (OAC) 1301:7-9-12 Guidelines. Harza followed the OAC 1301:7-9-12 (L) Guidelines for developing the closure report procedures including the permit process and arranging for a Certified UST Inspector to witness the UST removal. A copy of the 30-Day Closure Notification and Permit form is presented in Appendix I. A copy of the Final Inspection Field Report is not included because the Certified UST Inspector kept it for his records. This site assessment report describes the closure of the UST system.

## **2.0 Site Background Information**

### **2.1 UST Owner/Operator**

US Army Reserve – 88th RSC  
506 Roeder Circle

Certified Installer No. 10-91-1786  
BHE Environmental Inc.  
4249 Diplomacy Drive  
Columbus, OH 43228

### **2.9 UST Description**

The 550-gal Waste Oil UST was located east of the Maintenance Building next to the heavy vehicles parking garage, as shown in a site sketch presented in Figure 1 in Appendix V. As described above, the UST system was part of the USARC

OWS system operation. The double-wall fiberglass UST was an extension to the steel baffle-type OWS where the washed waste oil was stored. No information was available on the exact installation date and the age of the UST system. This UST was 4 feet (ft) in diameter and 6 ft long and contained approximately 550 gal of waste oil and water mixture before its removal. The 550-gal double-wall fiberglass UST was manufactured by Owens/Corning and had the Underwriters Laboratory (UL) Serial No. 79866. The piping connecting the two was made of steel. The OWS along with the UST was not in use at the time of removal. No information was available on the date or the person who last used the UST system. There was no alarm system or leak detection gauge visible on the UST before excavation.

The geographic reference of the site indicates that this UST, located in the Richland County, was not in a sensitive area. The UST was removed from the ground on December 2, 1998. Upon removal of the UST from the ground, the tank was in good condition and no holes were observed. A total of approximately 600 gal of waste oil and water mixture, sludge and rinsate was removed from the UST during removal activities. The UST excavation was backfilled with the excavated round pea gravel. A detailed description on the disposal of the waste oil contents with proper manifests is provided in Section 3.4. The tank was removed from the ground, cleaned, rendered useless and disposed on December 2, 1998. Harza was involved as the oversight consultant on behalf of USACE for the UST removal activities that were performed by BHE, the UST removal contractor.

### **3.0 Tank Removal Process**

#### **3.1 UST Removal Procedure**

A day before any digging for the UST removal, utility clearances were obtained at the UST location. The 550-gal Waste Oil UST was under 6 inches (6") thick concrete slab, which was saw cut and removed before any excavations began. After the UST contents were removed, the UST was excavated to expose the side sections of the UST. Excavation for the steel pipe connecting to the OWS system was conducted next so that the steel pipe could be cut and the waste oil mixture drained back into the UST. The UST was installed on a 12" thick concrete pad underneath with one metallic anchor strap on each end to hold it. The metallic anchors were broken to remove the UST. All steel piping were disconnected and removed. The internal atmosphere of the UST was tested frequently to ensure that the lower explosive limit (LEL) reading was below 20% at all times. No defuming of the UST was required as the LEL reading was never above 20%. During UST excavation, perched water from neighboring soils was entering the hole. The certified UST inspector confirmed that it was perched water and not groundwater, because the groundwater at this location was more than 20 ft deep.

The UST was then removed from the excavation hole and placed on the ground for cleanup.

The visual site evaluation of the UST system revealed no evidence of any operational problems. The double-wall fiberglass UST condition was good with the manufacturing label still visible, upon removal from the ground. On the ground, the UST had no signs of any tear, leakage or damage to the double-wall fiberglass tank. There was no indication of any concrete staining, surface soil staining or pipe joint leaks during the removal operation. The tank was placed in a tilted position to drain the remaining waste oil mixture. The concrete pad was left in the excavation bottom.

The backfill material consisted of round pea gravel and was placed on a plastic tarp after excavation. The backfill material had no visual observation of any stain or contamination. The native soil is clayey soil, brown in color. All the excavated backfill was returned into the hole. In addition to the pea gravel backfill, approximately 4 cubic yards of clean backfill material consisting of crushed stone was brought to the site by Four Seasons Environmental to fill the hole. The excavated hole was compacted in 6 to 12 inch lifts using backhoe bucket and graded. The surface restoration of the site will be performed by USACE.

### **3.2 UST Atmosphere Monitoring**

The UST internal atmosphere was monitored by BHE with an explosimeter (combustible gas and oxygen meter) Model 261 manufactured by Mine Safety Appliances (MSA). The UST internal atmosphere and the excavation area were also tested with the LEL-O<sub>2</sub> meter to assure that the LEL reading remained less than 20 % during the removal process.

The instrument was calibrated in the morning using manufacturer recommended calibration gas. Prior to each reading, the instrument was cleared and reset. The internal atmosphere of the empty UST was monitored by lowering the explosimeter probe down the manhole and obtaining readings near the bottom, middle, and upper parts of the UST.

### **3.3 UST Contents Sampling**

Consistent with the OAC 1301:7-9-12 Guidelines, the UST contents were analyzed before proper disposal by BHE. A total of eleven 55-gal drums (approximately 550 gal) were used to store on site, the waste oil and water mixture pumped from the UST. A sample was collected from one of the drums and sent for characterization to a certified laboratory before disposal. A detailed description on the amount and analytical description of the UST contents will be provided at a later date. The analytical results are presented in Appendix III.

### **3.4 Removal of Product and Sludge**

The PVC pipe leading to the OWS system was cut and drained back into the UST. The outlet of the OWS was plugged, after the product in the piping was drained. As reported earlier, total of approximately 600 gal of waste oil and water mixture, sludge and rinsate were removed from the UST on December 2, 1998. A total of twelve (12) 55-gal drums were used to store the contents of the UST. Out of these twelve 55-gal drums, eleven (11) drums contained the waste oil and water mixture and the remaining one drum contained waste oil sludge and rinsate collected after cleaning of UST.

### **3.5 Tank Cleaning**

The inside of the Waste Oil UST was cleaned by BHE. After testing its internal atmosphere, the tank was cut open at one end and decontaminated in place with safety adsorbents. The tank was triple-steam rinsed and the generated sludge and rinsate were collected and contained in one 55-gal drum. This drum of waste oil sludge will be transported and disposed at a later date. A copy of the manifest is presented in Appendix II.

### **3.6 Soil Vapor Monitoring**

During excavation for the UST, the excavated backfill pea gravel surrounding the UST was continuously monitored using a Photo-Ionization Detector (PID) Model MiniRAE. The PID is capable of detecting volatile hydrocarbon vapors in the 1-100 ppm range. Prior to each reading, the instrument was cleared and reset. Excavated backfill material samples were tested by extracting a fresh sample and splitting into two from a depth of 4 to 6 inches below the exposed surface. Each excavated sample was placed into a fresh plastic bag and the headspace was analyzed with the PID. This allowed to alleviate the potential for false readings from volatilization caused by moving air and evaporation. The sample was collected from the highest field reading.

The PID readings were taken at different intervals during the removal of the Waste Oil UST. No PID readings were obtained from the stockpiled excavated backfill materials. A copy of the field readings is presented in Appendix IV.

## **4.0 Site Assessment**

A site assessment for the UST was conducted on December 2, 1998 in accordance with the OAC 1301:7-9-12 (K) 4(c) sampling requirements for permanent UST closure by removal.

## 4.1 Soil Sampling Locations

The soil sample locations for the closure site assessment were taken to check for any contamination. Overall, three samples were collected for this 550-gal Waste Oil UST. Two grab samples were taken from the excavation floor, one at either end of the UST. The grab samples from the bottom of the excavation were collected from the East and West ends of the UST, 2 feet below the surface of the native soil, clayey brown in color. The sample locations were within one foot of either end of the concrete pad.

Since the volume of the excavated backfill material was more than 25 cubic yards, six headspace readings were taken as required by OAC 1301:7-9-12 Guidelines. One grab sample was collected from the backfill material. The sample with the highest field screening reading was selected for laboratory analysis. Since there were no headspace readings observed, one sample was collected from the north side of the excavated pile (Pile #1). No pipeline sample was taken as the piping run was only 4 feet between the UST and the OWS system, less than the required twenty feet.

The sample identification numbers are labeled as OH037-VOC@-1298 and OH037-TPH@-1298, where @ represents the location. The sampling locations, the sample identification numbers, and the layout of the excavation hole are shown in Appendix V.

## 4.2 Soil Sampling Procedure

The soil sampling procedures for the closure samples were followed using the OAC 1301:7-9-12 Guidelines for UST site assessments. All samples were collected in native soil, 2 feet below the surface. A field location map was generated during the site assessment and is presented in Figure 1 in Appendix V. All samples collected for this UST were analyzed for Volatile Organic Aromatics (VOA) and Total Petroleum Hydrocarbons (TPH). As specified in the guidelines, soil samples for VOA and TPH analysis were collected in 4 oz. clear wide mouth container with teflon lined septa caps. No preservatives were used for either analyses. The samples were then placed in a cooler with ice bags to keep them below a temperature of 4°C.

All samples were collected using disposable gloves. The disposable gloves were replaced after every sample collection. Soil samples in the excavation hole were performed using a backhoe. For the excavated backfill sampling, hand was used to collect the sample 1 foot inside the backfill. Decontamination of all equipment was carried with double rinse of Alconox followed by triple rinse of distilled water. After collection of all samples, samples were neatly labeled and packed for shipment to laboratory. For shipping to the laboratory, a Quality Assurance/Quality Control (QA/QC) sample was also sent in addition to the

regular samples. The QA/QC sample was a regular trip blank (Laboratory prepared sample, VOC vial containing 40 ml distilled water).

Samples were collected by Harza. All samples collected and shipped were identified in a Chain of Custody (C.O.C.) sheet. All samples including duplicate copies of the C.O.C. were shipped next day via Federal Express. A copy of the C.O.C. is presented in Appendix VII.

### **4.3 Soil Analytical Results**

The samples were analyzed for VOA analysis using EPA Method 8260 (previously 8240) and for TPH analysis using EPA Method 418.1R (previously 418.1). All analyses for this site were performed by a certified laboratory, Great Lakes Analytical, Buffalo Grove, IL. For VOA analysis, the analytical results indicated that all three samples were non-detect. Also, for TPH analysis analytical results indicated that all three samples were non-detect. The analytical results for the soil samples and a copy of the C.O.C. are presented in Appendix VII.

## **5.0 Disposal of Waste Materials**

### **5.1 Soil Disposal**

During removal of the UST, the size of the excavation hole was 12 ft 1 in x 11ft 4 in x 8ft 11in, a total of about 1221 cubic feet (approximately 45 cubic yards). As described in Section 3.1, the excavation backfill material was stockpiled (Pile # 1) over a liner. No soil was disposed off-site. No readings were obtained from the excavated stockpile, Pile # 1, and there were no visual signs of any stain or any odor. All the 45 cubic yards of excavated backfill soil was returned into the hole for restoration purposes. A copy of the Soil Disposal/Treatment Notification Form is included in Appendix VI.

### **5.2 UST Contents Disposal**

A total of approximately 600 gal of waste oil and waster mixture, sludge and rinsate was removed from the UST during removal activities performed on December 2, 1998. A total of twelve (12) 55-gal drums were used to store the contents of the UST.

Eleven (11) 55-gal drums (approximately 550 gal) of waste oil and water mixture pumped from the UST stored on site will be hauled off site for disposal at a later date. UST contents will be manifested for off-site transportation. A copy of the manifest is presented in Appendix IV.

One 55-gal drum of waste oil contaminated sludge and rinsate produced after cleaning of the tank will be disposed at a later date. A copy of the manifest is presented in Appendix II.

The concrete pad was left in the excavation prior to backfilling the hole with pea gravel.

### **5.3 UST Disposal**

The double-wall fiberglass UST which was removed, cleaned and rendered useless was disposed of at Four Seasons Environmental, Groveport, OH on December 2, 1998. A copy of the disposal receipt is presented in Appendix VIII.

## **6.0 Site Restoration**

The site was restored on December 2, 1998. All the excavated pea gravel backfill was returned into the hole. In addition to the pea gravel backfill, approximately 4 cubic yards of clean backfill material consisting of crushed stone was brought to the site by Four Seasons Environmental to fill the hole. The soil was compacted in accordance with contract specifications with 6-12 inch lifts and compaction using backhoe bucket. Final surface restoration will be performed by USACE.

## **7.0 Conclusions**

Based on the laboratory analytical results for all confirmation closure samples, all VOAs and TPH analyses were found below detection limits. Therefore, a clean closure letter for this 550-gal double-wall fiberglass UST (Facility ID# 702643) located at Mansfield, OH is warranted.

Project: 88th RSC USTs Removal

Enclosed are the results from 3 soil samples and 1 water sample received at Great Lakes Analytical on December 8, 1998. The requested analyses are listed below:

SAMPLE#	SAMPLE DESCRIPTION	DATE OF COLLECTION	TEST METHOD
8120608	Soil, OH037-TPH1-1298	12/2/98	TPH, EPA 418.1 VOC, EPA 8260
8120609	Soil, OH037-TPH2-1398	12/2/98	TPH, EPA 418.1 VOC, EPA 8260
8120610	Soil, OH037-TPHEX- 1298	12/2/98	TPH, EPA 418.1 VOC, EPA 8260
8120611	Water: TR#P Blank	12/2/98	VOC, EPA 8260

This report may not be reproduced, except in full, without the written approval of the laboratory.

Please contact me if you have any questions. In the meantime, thank you for the opportunity to work with you on this project.

Very truly yours,

GREAT LAKES ANALYTICAL

MEMORANDUM FOR Ohio Bureau of Underground Storage Tanks

ATTN: James Johnson, 6606 Tussing Road – P.O. Box 687  
Reynoldsburg, OH 43068-9009

SUBJECT: Registration for Underground Storage Tanks (USTs) in Ohio

1. Attached are five UST registration forms for separate Army Reserve Centers in Ohio. The Reserve Centers are located in Akron, Bellaire, Mansfield, Sharonville, and Warrensville Heights.
2. Please forward the tank registration numbers to me after the registration forms have been processed. If you have any questions about the information that I have provided on the registration forms, please do not hesitate to contact me at 1-800-843-2769 ext. 3821.

Environmental Protection Specialist

REGISTRATION FOR UNDERGROUND STORAGE TANKS	FEE SCHEDULE
BUREAU OF UNDERGROUND STORAGE TANKS 6606 TUSSING ROAD - P O. BOX 687 REYNOLDSBURG, OHIO 43068-9009	1989: \$20.00 PER TANK OTHER YEARS: \$25.00 PER TANK
NEW      AMENDED      CHANGE IN OWNERSHIP      ANNUAL RENEWAL (CIRCLE ONE)	
<u>Conditions Requiring Registration of an UST</u> <ol style="list-style-type: none"> <li>1. Administrative Code Section 1301:7-9-04(D) requires that any person to whom ownership of any UST is transferred shall, within 30 days of the transfer, submit a transfer of UST registration application to the Fire Marshal for each location where an UST subject to the transfer is located. The transfer of ownership fee is \$25.00 per UST.</li> <li>2. Any owner who installs an UST system shall, within thirty days of bringing such UST system into service, submit the registration application to the Fire Marshal along with appropriate fees.</li> <li>3. If an UST system is installed at a location for which there is a current registration, the owner of the UST system must submit an amended registration along with the appropriate fees to the Fire Marshal within thirty days of bringing the system into service.</li> <li>4. If an UST system was taken out of service after January 1, 1974, not in compliance with the Ohio Fire Code, the tank must be registered.</li> </ol>	
<u>Tank Registration Application Fee:</u> Each tank registration application must be accompanied by a fee made payable to: "Treasurer, State of Ohio". <b>NOTE:</b> Federal, State and political subdivisions are exempt from paying the fee but they must comply with all other requirements of the underground tank registration rule, including the completion of this form.	
<u>When Can A Tank Registration Be Denied?</u> The State Fire Marshal shall deny a tank registration for the following reason: <ol style="list-style-type: none"> <li>1. The application does not provide all the information indicated on the prescribed form.</li> <li>2. The owner did not submit the tank registration fee required.</li> </ol>	
<u>Exempt USTs</u> <ol style="list-style-type: none"> <li>1. Farm and residential tanks holding 1,100 gallons or less of motor fuel used for non-commercial purposes.</li> <li>2. Tanks storing heating oil and kerosene for consumptive use on the premises where stored.</li> <li>3. Underground storage tanks holding 110 gallons or less.</li> <li>4. Septic tanks and systems for collecting storm water and wastewater.</li> </ol>	
<u>Penalties</u> Any person who knowingly fails to register or submits false information may be subject to a civil penalty not to exceed \$10,000.00 for each day the registration is late or for which false information is submitted. Any person who knowingly fails to register or submits false information may be subject to conviction of an unclassified felony with a maximum fine of \$25,000.00 and maximum imprisonment of 14 months.

## **1.0 INTRODUCTION**

International Training Institute of South Florida, Inc. (ITI) has performed a site survey for the 88<sup>th</sup> Regional Support Command (RSC) property located at the Scouten USARC located in Mansfield, Ohio (OH-037). ITI's work was based on a scope of work prepared by the 88<sup>th</sup> RSC and administered under Adecco Technical Task Order DAY A000003029.

## **2.0 PURPOSE**

This report provides information concerning the potential types, quantities, locations, and condition of asbestos containing materials, polychlorinated biphenyls (PCBs), lead based paint (LBP) and radon.

The purpose of this document is to assist the 88<sup>th</sup> RSC in complying with federal and state regulations concerning Asbestos, PCBs, LBPs and Radon. ITI's evaluation is based on a site inspection, information obtained from available documentation located at the site and the 88<sup>th</sup> RSC, and interviews with persons knowledgeable about the current and past history of the site.

## **3.0 SITE DESCRIPTION**

### **ADMINISTRATION BUILDING**

This one story building is a block structure with a brick exterior finish. Interior walls are painted block and framed drywall partitions. The roof is a flat built-up asphalt mopped surface.

### **OMS**

This one story building is a block structure with a brick exterior finish. Interior walls are painted block. The roof is a flat built-up asphalt mopped surface.

### **3.1 SCOPE OF WORK**

ITI has conducted one or more of the following tasks at this site: collect radon samples, conduct a lead based paint inspection, identify PCBs, and asbestos inspection.

- Conduct radon testing at all identified 88<sup>th</sup> RSC sites for radon gas concentration levels and review all previous radon test results provided by the government.
- Determine levels of radon gas by installing passive detection equipment (alpha track) in specific buildings of the selected facilities.
- Utilize the laboratory that supplied the alpha track radon detectors for analysis.

- Evaluate each facility by age to determine the potential for existence of lead based paint (LBP) and review any previous LBP surveys conducted by the government
- Where the potential for LBP is determined, ITI will conduct a visual inspection of all (but not limited to) of the following surfaces; doors, door casings and frames, walls, upper and lower, windows sashes, stair stringers, treads, and handrails, ceilings, vents, structural steel, HVAC ducts and window guards at each facility. Samples of suspect surfaces will be conducted by using a portable, on-site measuring instrument that uses X-Ray Fluorescence to determine the existence of LBP.
- Include all information observed as part of the final report to include all existing LBP and its condition, along with all sample locations (CAD drawings and/or field notes).
- Evaluate each facility by age to determine the potential for the existence of PCBs and review any previous PCB surveys conducted by the government.
- Where the potential for PCBs is determined, ITI will conduct a visual inspection of each facility to determine the existence of PCBs and identify all potential equipment. This will require ITI to randomly open one or more like types of equipment to visually confirm the existence of PCB containing material within the equipment.
- Include all information as part of the final report to include all equipment and its condition, potentially containing PCBs.
- Review all previous asbestos surveys conducted by the government.
- ITI will visually inspect each facility and visually verify all information found in previous surveys and note any variances and/or missing data.
- ITI will identify all asbestos containing materials (ACM) and any potential asbestos containing material (PACM), estimate the amount in the entire building and determine and record the condition of the ACM and PACM in the survey. Samples will be collected on friable PACM only. PACM identified in the significantly damaged and damaged conditions will be analyzed. Friable PACM in good condition will only be analyzed with the approval for the COR or his representative. ITI will maintain and store all samples collected until sent for analysis or authorized disposal by the COR or his representative. All samples not analyzed will be disposed of in accordance with all Federal, State and Local regulations. Any friable ACM or PACM in significantly damaged or damaged condition will be brought to the attention of the COR or his representative as soon as possible.
- ITI will include all information as part of the final report to include all existing ACM, any PACM and the condition of both existing asbestos and PACM.
- Installation and retrieval of government owned alpha track radon detectors.
- ITI must document all new data and integrate the 88<sup>th</sup> RSC information into the final report.

## **3.2 EXECUTIVE SUMMARY**

### **ASBESTOS**

Based on ITI's survey of the building, ITI has concluded the following materials contain asbestos:

#### **ADMINISTRATION BUILDING**

##### **CONFIRMED ASBESTOS**

- Floor tile and mastic (RMT Survey, 1992)
  - Approximately 4,500 SF, located throughout
- Water storage tank insulation (RMT Survey, 1992)
  - Approximately 112 SF, located in Mechanical Room
- Thermal insulation on pipes (RMT Survey, 1992)
  - Approximately 1140 LF, located throughout
- Thermal insulation on pipe fittings (RMT Survey, 1992)
  - Approximately 180 fittings, located throughout
- Exhaust flue mud (RMT Survey, 1992)
  - Approximately 10 SF, located in Mechanical Room
- Transite wall partitions (RMT Survey, 1992)
  - Approximately 230 SF, located in Men's Restroom
- Joint tape and compound (RMT Survey, 1992)
  - Located throughout

##### **PRESUMED ASBESTOS**

- Folding curtain room divider
  - Located between Classrooms 1 and 2
- Roofing Material
- Fire Doors
- Electrical Wiring

#### **OMS BUILDING**

##### **CONFIRMED ASBESTOS**

- No suspect materials observed contain asbestos

##### **PRESUMED ASBESTOS**

- Roofing Material
- Fire Doors
- Electrical Wiring

## **PCB'S**

Based on ITI's survey of the building, ITI has concluded that the following types of transformers are located in the building.

### **ADMINISTRATION BUILDING**

- No report

### **OMS BUILDING**

- Light Ballasts – Advance REL-2P32-RH-TP (“No PCB’s” on label)

### **TRANSFORMERS**

- There are three pole-mounted transformers located on the exterior of the buildings. (No marking on transformers or poles, presumed to contain PCBs)

## **LEAD BASED PAINTS**

Based on ITI's survey for LBP, ITI has concluded that the following building products contain LBP:

### **ADMINISTRATION BUILDING**

- Interior door in Boiler Room
  - Metal substrate, grey color
  - Fair condition
- Walls in Men's Bathroom
  - Ceramic substrate, tan color
  - Intact condition

### **OMS BUILDING**

- Interior door components
  - Metal substrate, grey color
  - Intact condition
- Interior overhead door components
  - Metal substrate, white color
  - Intact condition

## **RADON**

Based on the inspection conducted on 2-7-03, ITI has concluded that radon exists above 4 pCi/l for this location (See appendix D for this location).

## **4.0 PREVIOUS INSPECTIONS**

Below are the records for previous inspections conducted at this site.

### **4.1 ASBESTOS**

A previous inspection was performed in 1992 by RMT, Inc. Material found in the previous survey that contains asbestos is listed below:

- Water storage tank insulation
- Pipe insulation and fittings
- Exhaust flue mud
- Floor tile & mastic
- Transite wall partitions
- Joint tape and compound

These materials are still present in the USRAC Building.

### **4.2 PCB'S**

- NO PREVIOUS INSPECTIONS

### **4.3 LEAD BASED PAINT**

- NO PREVIOUS INSPECTIONS.

### **4.4 RADON**

- NO PREVIOUS INSPECTIONS

## **5.0 ASBESTOS CONTAINING MATERIALS**

During this survey conducted on 20 August 2003 and 15 December 2004, ITI accredited building inspectors Narciso Martinez (License Number 34253) and Mr. Brian Gibson (License Number 34494) performed a walk-through of the subject building. This was performed in order to identify and delineate locations of homogeneous materials suspected of containing asbestos. A homogeneous material is defined as material that presents similar distinguishing features such as contents. Once homogeneous materials were identified, ITI inspectors collected bulk samples from these materials in order to confirm the presence or absence of asbestos. Samples were collected in accordance with U.S. Environmental Protection Agency (EPA) and Occupational Safety and Health Administration (OSHA).

### **BULK SAMPLES**

During the Inspection, sampling locations were recorded on floor plans and are identified in Appendix A of this report.

A.E.S.L. Environmental located in Tempe, Arizona is the laboratory ITI used for analysis of bulk samples. This independent laboratory successfully participates in the National Voluntary Laboratory Accreditation Program (NVLAP) for bulk asbestos sample analysis. The samples are analyzed using Polarized Light Microscopy (PLM) analysis methodology coupled with dispersion staining solutions to distinguish the unique optical properties of mineral forms. Employing this method of analysis allows asbestos fiber characteristics to colonize, which enables the microscopist to verify the presence or absence, quantity and type of asbestos in the samples. Any product that contains more than one percent asbestos is considered to be ACM by EPA & OSHA. ITI performed QA/QC sampling for the total collected bulk samples (minimum of 10%). PLM results will be located in Appendix A to this report.

## **5.1 ASSESSMENT METHODOLOGY**

All Asbestos Containing Building Materials (ACBM) were classified into the following three types of suspect materials:

1. Surfacing Materials
2. Thermal System Insulation (TSI)
3. Miscellaneous Materials

ACM identified during the building survey was assessed according to the protocol described in 40 CR 763. The protocol evaluates the risk of exposure to airborne asbestos fibers by assessing the condition of each ACM and potential for that ACM to be disturbed and generate fibers. ACM was assessed according to each of the following factors:

- (1) Damaged or significantly damaged thermal system insulation ACM.
- (2) Damaged friable surfacing ACM.
- (3) Significantly damaged friable surfacing ACM.
- (4) Damaged or significantly damaged friable miscellaneous ACM.
- (5) ACBM with potential for damage.
- (6) ACBM with potential for significant damage.
- (7) Any remaining friable ACBM or friable suspected ACBM.

## ASSESSING CONDITION AND FRIABILITY

NATIONAL EMISSIONS FOR HAZARD AIR POLLUTANTS, 40 CFR Part 61, Subpart M, definitions for asbestos:

- Friable (F): ACM that can be crumbled, crushed, or reduced to powder by hand pressure.
- Nonfriable Category 1(NF1): Asbestos containing packing, gaskets, resilient floor coverings, asphalt roofing products, caulks, and mastics. These bituminous materials are assumed to remain nonfriable if demolition is performed using “normal” methods, but will become friable if severely weathered, sanded, or abraded.
- Nonfriable Category 2 (NF2): ACM excluding Category 1 nonfriable ACM, that, when dry and in its present form, cannot be crumbled, pulverized or reduced to powder by hand pressure; however, these materials may become friable during demolition activities. These products include Transite board and asbestos cement products.

The condition of ACM including severity and extent of damage is classified into one of the following categories:

- Significantly Damaged: ACM that is crumbled, blistered, gouged, marred, delaminated, or otherwise damaged either uniformly or locally over a substantial portion of its surface area.
- Damaged: ACM that is crumbled, blistered, gouged, marred, delaminated, or otherwise damaged either uniformly or locally over a small portion of its surface area.
- Good: ACM with very little or no damage.
- Potential for Disturbance: The potential for disturbance of each ACM was evaluated with respect to the types and frequency of occupancy, whether the ACM was accessible to area occupants, including vibration and air erosion.

## 5.2 ASBESTOS CONTAINING MATERIALS

### ADMINISTRATION BUILDING

#### CONFIRMED ASBESTOS

- Floor tile and mastic (RMT Survey, 1992)
  - Approximately 4,500 SF, located throughout
  - Good condition, non friable, NF1
- Water storage tank insulation (RMT Survey, 1992)
  - Approximately 112 SF, located in Mechanical Room
  - Good condition, friable
- Thermal insulation on pipes (RMT Survey, 1992)
  - Approximately 1140 LF, located throughout
  - Good condition, friable

- Thermal insulation on pipe fittings (RMT Survey, 1992)
  - Approximately 180 fittings, located throughout
  - Good condition, friable
- Exhaust flue mud (RMT Survey, 1992)
  - Approximately 10 SF, located in Mechanical Room
  - Good condition, friable
- Transite wall partitions (RMT Survey, 1992)
  - Approximately 230 SF, located in Men's Restroom
  - Good condition, non friable, NF2
- Joint tape and compound (RMT Survey, 1992)
  - Located throughout
  - Good condition, friable

#### **PRESUMED ASBESTOS**

- Folding curtain room divider
  - Located between Classrooms 1 and 2
- Roofing Material
- Fire Doors
- Electrical Wiring

### **OMS BUILDING**

#### **CONFIRMED ASBESTOS**

- No suspect materials observed contain asbestos

#### **PRESUMED ASBESTOS**

- Roofing Material
- Fire Doors
- Electrical Wiring

### **5.3 NON ASBESTOS CONTAINING MATERIAL**

#### **ADMINISTRATION BUILDING**

- Yellow fiberglass thermal system insulation
  - Located on piping in the Drill Hall
- Plaster Ceilings (PCLG)
  - Located in Bathrooms
- Plaster walls (PL)
  - Located in Bathrooms
- Window Glazing (WG)
  - Located throughout
- Yellow carpet adhesives (CA)
  - Located in Rooms 5, 6, 7, 8
- Expansion joint material (EJ)
  - Located on exterior brick walls

- Gypsum wallboard (PWB)
  - Located throughout

#### **OMS BUILDING**

- Window Glazing (WG)
  - Located throughout
- Fiberglass pipe insulation (TSI)
  - 250 LF, located throughout

### **6.0 POLYCHLORINATED BIPHENYL**

PCBs are mixtures of chlorinated biphenyls that are relatively nonflammable and have useful heat exchange and dielectric properties. PCBs were used in the electric industry as dielectric fluid in capacitors and transformers until 1976, when PCBs were banned from use because of their carcinogenic properties. PCBs were also used in the formulation of lubricating oils, pesticides, adhesives, plastics, inks, paints, and sealants. ITI inventoried electrical transformers and light ballasts as part of its scope.

The primary uses of potential PCB materials are associated with transformers (i.e., pad-, pole-, or wall-mounted) or light ballast. ITI recorded available information, such as the manufacturer, serial and model number, condition, date of manufacture, and location of potential PCB-containing equipment.

The principal requirements for PCB management are detailed in the Toxic Substances Control Act (TSCA) federal regulatory program, Title 40; Subchapter R, Part 761, Code of Federal Regulations (CFR). CFR Title 40 Part 761 establishes regulations for the use, storage, removal, disposal, and testing of PCB-containing equipment.

ITI used these management requirements regarding onsite PCB management as guidelines during the Site investigation.

#### **6.1 PCB INVENTORY**

ITI personnel observed the following: - Refer to drawing in Appendix B for inspection locations.

Based on ITI's survey of the building, ITI has concluded that the following types of transformers are located in the building.

#### **ADMINISTRATION BUILDING**

- No report

#### **OMS BUILDING**

- Light Ballasts – Advance REL-2P32-RH-TP (“No PCB’s” on label)

## **TRANSFORMERS**

- There are three pole-mounted transformers located on the exterior of the buildings. (No marking on transformers or poles, presumed to contain PCBs)

## **7.0 LEAD BASED PAINT**

During this survey, ITI inspector, Mr. Narciso Martinez performed a walk-through of the subject building on 19 March 2003 for LBP. This was performed in order to identify and delineate locations that would be sampled for lead based paint.

During the Inspection, sampling locations were recorded on working drawings and are identified in Appendix C of this report.

Samples were taken using an X-ray Fluorescence (XRF) Analyzer RMD Model LPA-1 (Serial Number 01908) manufactured by RMD, Inc. of Watertown, MA. An XRF analyzer works by exposing a paint surface to radiation emitted from a sealed source inside the instrument. The source of this radiation is cobalt-57 isotope. This radioactive material spontaneously emits energy in the form of X rays and gamma rays. When these rays are released from an XRF analyzer and hit a painted surface, the elements in the paint matrix - which can include lead - are excited and respond by emitting energy in the form of X rays characteristic of each of the elements. This response is known as Fluorescence.

In 1990 the Department of Housing and Urban Development issued the first comprehensive document addressing lead based paint in housing. This document, Lead based paint: Interim Guidelines for Hazard Identification and Abatement in Public and Indian Housing established criteria for conducting lead based paint inspections in public and Indian housing.

This Interim Guidelines described how to conduct a lead based paint inspection. State and Federal regulations use the XRF analyzer or laboratory analysis and specify a reading of 1.0 milligrams per square centimeter (XRF) and 0.5 percent by weight (Paint Chips) as the levels that require abatement.

See Appendix C for XRF report.

## **7.1 LEAD BASED PAINT**

Based on ITI's survey for LBP, ITI has concluded that the following building products contain LBP:

### **ADMINISTRATION BUILDING**

- Interior door in Boiler Room
  - Metal substrate, grey color
  - Fair condition

- Walls in Men's Bathroom
  - Ceramic substrate, tan color
  - Intact condition

## **OMS BUILDING**

- Interior door components
  - Metal substrate, grey color
  - Intact condition
- Interior overhead door components
  - Metal substrate, white color
  - Intact condition

## **7.2 RESPONSIBLE AGENCIES**

Various groups and governmental bodies have responsibilities for conducting, evaluating the quality of, or developing a hazard control strategy based upon lead based paint testing. These groups include, but not limited to the following:

- State, Indian tribe, and local governments;
- The US Department of Housing and Urban Development (HUD);
- The US Environmental Protection Agency (EPA);
- Housing authorities;
- Homeowners and landlords; and
- Lead based paint inspectors, risk assessors, and hazard control contractors.

## **8.0 RADON**

Radon is formed from the radioactive decay of radium, a breakdown product of uranium found in minute quantities in most soils. Because radon is an inert gas, it does not react with soil; soil merely serves as a channel through which the gas moves. Soil composition alone is not a good indicator of potential indoor radon problems because radon levels can vary considerably, by as much as a factor of 20 to 100, in the same geographic area.

The EPA regulates the maximum allowable exposure levels for radon and recommends that action be taken to reduce the levels if radon concentrations in a structure that exceeds 4 picocuries per liter (pCi/l) in air.

The objective of the Army Radon Reduction Program (ARRP) is to identify and modify all building structures owned or leased by the Army that have indoor radon concentrations greater than 4 pCi/l. According to the ARRP, if the radon concentration is 4 pCi/l or less and the measured building is geologically and structurally representative of the installation, no further action is required. ITI has conducted radon surveys at this site in February 2003, which included placement, retrieval, and analysis of alpha track canisters, which detect alpha particles emitted from radon.

Based on the inspection conducted on 2-7-03 ITI has concluded that Radon exists above 4 pCi/l for this location (See appendix D for this location).

## **9.0 ACTION SUMMARY**

### **ASBESTOS**

Based on ITI's survey of the building, ITI has concluded the following materials contain asbestos:

#### **ADMINISTRATION BUILDING**

##### **CONFIRMED ASBESTOS**

- Floor tile and mastic (RMT Survey, 1992)
  - Approximately 4,500 SF, located throughout
- Water storage tank insulation (RMT Survey, 1992)
  - Approximately 112 SF, located in Mechanical Room
- Thermal insulation on pipes (RMT Survey, 1992)
  - Approximately 1140 LF, located throughout
- Thermal insulation on pipe fittings (RMT Survey, 1992)
  - Approximately 180 fittings, located throughout
- Exhaust flue mud (RMT Survey, 1992)
  - Approximately 10 SF, located in Mechanical Room
- Transite wall partitions (RMT Survey, 1992)
  - Approximately 230 SF, located in Men's Restroom
- Joint tape and compound (RMT Survey, 1992)
  - Located throughout

##### **PRESUMED ASBESTOS**

- Folding curtain room divider
  - Located between Classrooms 1 and 2
- Roofing Material
- Fire Doors
- Electrical Wiring

#### **OMS BUILDING**

##### **CONFIRMED ASBESTOS**

- No suspect materials observed contain asbestos

##### **PRESUMED ASBESTOS**

- Roofing Material
- Fire Doors
- Electrical Wiring

**Based on the findings above, ITI recommends the following:**

- Observations for detected asbestos were based on visible and accessible materials; therefore, asbestos containing materials may be present in inaccessible areas such as ceiling plenums, crawl spaces, attics, etc.
- An imminent asbestos hazard was not present at the facility during the site visit.
- Develop and Implement an O & M Plan.

**Based on the asbestos present in the building, ITI recommends the following:**

- Develop and implement an O & M Plan for all known and suspect ACM
- There are three primary objectives of the O & M program: (1) clean up existing contamination (2) minimize further fiber release by controlling access to ACM, and (3) maintain ACM until it is eventually removed. Properly prepared and implemented, this plan will document the building owner's prudence in dealing with asbestos in the building.

**PCB'S**

Based on ITI's survey of the building, ITI has concluded that the following types of transformers are located in the building:

**ADMINISTRATION BUILDING**

- No report

**OMS BUILDING**

- Light Ballasts – Advance REL-2P32-RH-TP (“No PCB's” on label)

**TRANSFORMERS**

- There are three pole-mounted transformers located on the exterior of the buildings. (No marking on transformers or poles, presumed to contain PCBs)

**Based on the findings above, ITI recommends the following:**

- Observations for PCB's were based on visible and accessible materials. Therefore, PCB's may be present in other ballasts not observed.
- No imminent PCB hazard was present at the facility during the site visit.
- Any ballast not labeled “Non PCB's” must be handled according to Federal and State regulations for proper disposal.

**Based on the labels found on the transformers, ITI recommends the following:**

Several light ballasts do not have a label stating the absence of PCBs. Without this statement the ballast is presumed to contain PCBs and must be handled accordingly.

Additional testing may be required before this ballast is disturbed or disposed. At a minimum, requirements of 40 CFR 761 must be followed should sampling be required.

### **LEAD BASED PAINTS**

Based on ITI's survey for LBP, ITI has concluded that the following building products contain LBP:

#### **ADMINISTRATION BUILDING**

- Interior door in Boiler Room
  - Metal substrate, grey color
  - Fair condition
- Walls in Men's Bathroom
  - Ceramic substrate, tan color
  - Intact condition

#### **OMS BUILDING**

- Interior door components
  - Metal substrate, grey color
  - Intact condition
- Interior overhead door components
  - Metal substrate, white color
  - Intact condition

**Based on the findings above, ITI recommends the following:**

- Observations for LBP's were based on visible and accessible materials. Therefore, LBP's may be present in inaccessible areas.
- An imminent LBP hazard was not present at the facility during the site visit.
- Workers need to take appropriate safe guards when working, i.e., cutting, grinding, sanding, welding, etc., on areas identified with LBP.
- Conduct a TCLP for all areas identified with LBP prior to disposal.

### **RADON**

**Based on the inspection conducted on 2-7-03, ITI has concluded that Radon exists above 4 pCi/l for this location (See appendix D for this location).**

**Based on the findings above, ITI recommends the following:**

- **An imminent Radon hazard is present at the facility.**
- **According to the survey data as provided in Appendix D, there were results over 4 pCi/l for this location.**

## 10.0 WARRANTY

The field and laboratory results reported herein (only if samples are collected and/or analyzed) are considered sufficient in detail and scope to determine the presence of accessible and/or exposed suspect asbestos, PCB's, LBPs or radon gas in the facility. ITI warrants that the findings contained herein have been prepared in general accordance with accepted professional practices at the time of its preparation as applied by similar professionals in the community. Changes in the state of the art or in applicable regulations cannot be anticipated and have not been addressed into this report.

The survey and analytical methods have been used to provide the client with information regarding the presence of accessible and/or exposed suspect asbestos, lead, PCB's or radon in the facility at the time of the inspection. Test results are valid only for material tested. There is a distinct possibility that conditions may exist which could not be identified within the scope of the study or which were not apparent during the site visit. This inspection covered only suspect accessible materials with no destructive survey techniques. The study is also limited to the information available from the client at the time it was conducted.

This report is not intended to be an asbestos, lead based paint, PCB or Radon risk assessment, management plan or project design document and should not be used for the purpose of obtaining quotes.

A.E.S.L. LAB SAMPLE ID #	CLIENT SAMPLE ID #	SAMPLE DESCRIPTION & COLOR	TEST RESULTS		OTHER MATERIALS
			Pos. / Neg.	% & Type	
A021-1	OH-037-002-1	WG – White Material	Negative	-----	100% Non-Fibrous
A021-2	OH-037-002-2	TSI – Yellow TSI	Negative	-----	30% Cellulose 70% Fibrous Glass

Method: Polarized Light Microscopy, EPA Method 600/R-93/116

The result quantitations reported are an estimation based on the methods of visual microscopic estimation, which is considered only a semi-quantitative technique. Also, this report is indicative only of the sample material A.E.S.L. Laboratory received. Results do not necessarily reflect the makeup of the entire span of the material from which the samples were derived. Sampling techniques and/or sample handling may affect the integrity of the sample/s before submission to A.E.S.L. Laboratory and hence the outcome of the laboratory results. Samples not destroyed by testing are retained a minimum of thirty days.

A.E.S.L. Laboratory, recommends re-analysis by point count or Transmission Electron Microscopy (TEM) for materials that are found to contain less than ten percent (<10%) asbestos by PLM.

This report cannot be used by the client to claim product endorsement by NVLAP or any agency of the U.S. Government. This report shall not be reproduced except in full, without the written consent of A.E.S.L.

RE: Evaluation Specialist Certification # 34253

Dear Narciso Martinez:

This letter is to inform you that you have been certified by this department as an Asbestos Hazard Evaluation Specialist.

Included with this letter is your identification card. Proof of certification must be available for review at any relevant project.

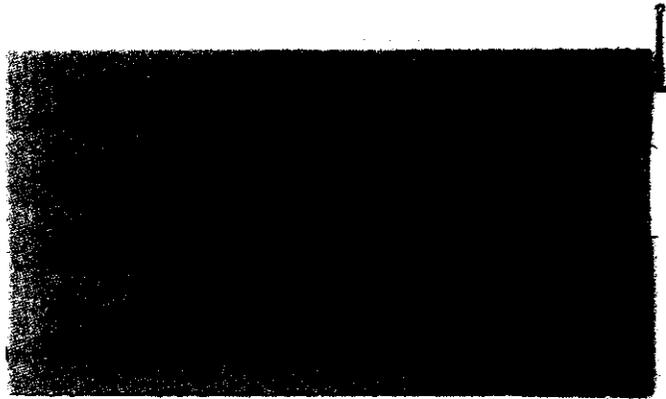

This certification may be revoked by the Director of Health for violation of any of the requirements of 3701-34 of the Ohio Administrative Code.

This certification will expire on JAN-27-2004.

If you have any questions regarding your identification card please call and speak with the asbestos licensing staff at (614) 644-0226.

Sincerely,

Bridgette C. Smith  
Licensure Administrator  
Asbestos Program  
Division of Quality Assurance

**DATABASE SUMMARY**

**BUILDING DRAWING**

**ASBESTOS SURVEY FIELD LOG**

**POLARIZED LIGHT MICROSCOPY ANALYSIS SUMMARY SHEETS**

*Prepared by:*

Activities that may disturb or render these materials friable should be prohibited. RMT recommends ACM be removed prior to major renovation or demolition projects that may potentially disturb these materials. An Interim Control, such as an Operation and Maintenance Program (O&M), should be developed and instituted for these materials. Such a program should include establishment of an information system for building occupants and maintenance personnel, including outside contractors, procedural requirements for handling and maintaining ACM in a non-friable state, and a periodic inspection schedule for reassessment. This program will allow the ACM to be properly managed until abatement is performed.

**COST ESTIMATES FOR SCOUTEN USARC**

**Mansfield, Ohio**  
SSG Roy Clifton Scouten USARC

<p><b>Identification Information:</b></p>	<p>Identification Number: OH037/39895 SSG Roy Clifton Scouten USARC 271 Hedges St., Mansfield, Richland County, Ohio 44903-2697 Telephone Number: (419) 525-1893 Mansfield North Quadrangle, Ohio, USGS 7.5 Minute Series, T21N R18W Section 22 (Figure 364) UTM: Z17, 372641E, 4512148N Present Owner/Occupant: The facility is owned by the United States Government and controlled by the 88th RSC.</p>
<p><b>Setting and Landscape:</b></p>	<p>The SSG Roy Clifton Scouten USARC consists of two buildings located on 3.5 acres of land (MN009) in a commercial and residential district of Mansfield, Ohio (Figure 365).<sup>1</sup> The facility is landscaped with grass, trees, and shrubs.</p>
<p><b>Archaeological Resources:</b></p>	<p>An archaeological records search at the Ohio State Historic Preservation Office determined that there are no known archaeological sites located within a one-mile radius of the SSG Roy Clifton Scouten USARC.</p>
<p><b>Historical Information:</b></p>	<p>The SSG Roy Clifton Scouten USARC was constructed in 1958.<sup>2</sup> There appear to have been no significant additions or alterations to the buildings since their original construction.</p>
<p><b>Security:</b></p>	<p>Security measures at the SSG Roy Clifton Scouten USARC include chain-link fencing topped with barbed wire surrounding a military vehicle parking area, the north, east and west sides of the Organizational Maintenance Shop, and a section of the east wall of the Reserve Center's drill hall. High intensity lighting is also present to illuminate the military and civilian parking areas.</p>

<p><b>Architectural Information:</b></p>	<p>The SSG Roy Clifton Scouten USARC consists of two concrete block buildings with red brick veneers. The buildings do not appear to exhibit historical or architectural character or merit that significantly contributes to the historic context of the period associated with their construction.</p>
<p><b>Building Descriptions:</b></p>	<p><b>Reserve Center (MN001)</b></p> <p>The Reserve Center functions as an administrative and drill facility for the SSG Roy Clifton Scouten USARC. Constructed in 1958<sup>1</sup>, it is a multiple-level irregular shaped building consisting of a one-story administration section and a two-story drill hall connected by a one-story, L-shaped enclosed corridor. The structure rests upon a concrete foundation with concrete block walls and a red brick veneer. A pair of metal pedestrian doors with single light fixed windows and three one-over-one double-hung windows with plain slip sills are recessed into the west side of the building (Figures 366 &amp; 367). Additional entrances include single and paired metal pedestrian doors on the south and east walls. A metal overhead retractable bay door is located on the east wall (Figure 368). Fenestrations include a series of one-over-one light double-hung windows with plain slip sills and two light sliding double-hung windows with plain slip sills around the perimeter of the building (Figure 369). A series of one-over-one light fixed and awning ribbon windows with continuous plain slip concrete sills are located on the east side of the drill hall near the roof eaves. Two metal vents are located within the brick veneer on the southeast corner of the building. A flat roof covers the structure (Figure 370).</p> <p><b>Organizational Maintenance Shop (MN011)</b></p> <p>The Organizational Maintenance Shop functions as a vehicle maintenance facility for the SSG Roy Clifton Scouten USARC. Constructed in 1958<sup>1</sup>, it is a one-story rectangular building that rests upon a concrete foundation with concrete block walls and a brick veneer. Two metal overhead retractable bay doors are located on north side of the building (Figure 371). Additional entrances include metal pedestrian with concrete steps are located on the east and west walls (Figures 372 &amp; 373). Fenestrations include a pair of one-over-one light fixed and awning ribbon windows with continuous plain slip concrete sills along the south wall near the roof eaves (Figure 374). A flat roof covers the structure. A concrete ramp is located northeast of the Organization Maintenance Shop and is used for vehicle maintenance activities undertaken at the facility (Figures 375 &amp; 376).</p>

<p><b>Eligibility:</b></p>	<p>None of the buildings located at the SSG Roy Clifton Scouten USARC meet the criteria for the National Register of Historic Places (NRHP), under Criterion A, B, C, or D, and thus are not recommended for nomination to the NRHP. A historic documentary and architectural investigation conducted at the facility determined there is no direct relationship between the facility and prehistoric or historic events in the Mansfield area (criterion A), there is no association with significant persons involved in prehistoric or historic events (criterion B), buildings on the facility are not architecturally or technologically significant (criterion C), and the facility is unlikely to hold future research potential (criterion D).</p>
<p><b>Recommendations:</b></p>	<p>No additional review under Section 110 is recommended until the existing buildings at the SSG Roy Clifton Scouten USARC reach the 50 year eligibility requirement for the NRHP in 2008, or unless specific undertakings require compliance with Section 106 of the National Historic Preservation Act (36 CFR 800).</p>

<p><b>Notes:</b></p>	<p><sup>1</sup> “Environmental Assessment for Construction of a New Reserve Center at Mansfield, Ohio,” Fort Knox Engineering and Housing Division, Fort Knox, Kentucky, July 1986, p. 2, and “Real Property Detail report Criteria: Total Inventory,” 88<sup>th</sup> RSC DSCEN Real Estate Division, March 1998, p. 24. A construction proposal by members of the Fort Knox Engineering and Housing Division state that 3.55 acres of land are associated with the SSG Roy Clifton Scouten USARC. However, records maintained by the 88<sup>th</sup> RSC DSCEN Real Estate Division state that 3 acres of land are</p>

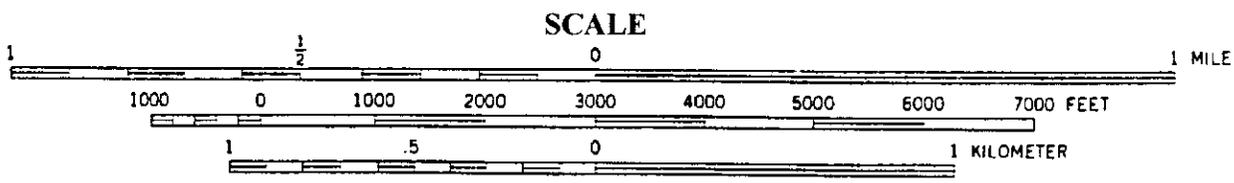

associated with the SSG Roy Clifton Scouten USARC. Fort McCoy Archaeology Laboratory investigators theorize that that size of the parcel of land at the facility is most likely 3.55 acres. Copies of the above reports are on file at the 88<sup>th</sup> RSC DSCEN Real Estate Division, Fort Snelling, Minnesota.

<sup>2</sup>“Dedication Plaque.” SSG Roy Clifton Scouten USARC, 1958. The dedication plaque located in the foyer of the Reserve Center on the SSG Roy Clifton Scouten USARC states the facility was dedicated to the memory of SSG Roy Scouten in 1958. Fort McCoy Archaeology Laboratory investigators theorize that the buildings at the facility were completed the same year as the dedication.

RE: NO FURTHER ACTION STATUS REGARDING CLOSURE REQUIREMENTS

Dear Sir/Madam:

The Bureau of Underground Storage Tank Regulations (BUSTR) has reviewed all information submitted for this incident number. Based on this information, BUSTR requires no further action involving closure under Ohio Administrative Code 1301:7-9-12.

Thank you for your cooperation. If you have any questions, please contact our office at (614) 752-7938.

Sincerely,

A handwritten signature in black ink, appearing to read "Kelly Gill".

Supplemental Information for UST Closure Reports

Dear Mr. Gill:

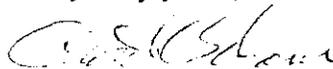

A few months ago, a UST Closure Report was submitted for the above-referenced facility. At that time, manifests for disposal of UST contents and waste oil sludge were not available. However, Mr. Tim Lutz of BUSTR indicated that the report should be submitted at that time and the manifests should be forwarded later. The required manifests and analytical results are enclosed now. Please attach these to the referenced Closure Report and issue a final closure certification for this tank.

Please direct written correspondence to:

Mr. Kurt Zacharias  
Environmental Protection Specialist  
Commander, 88<sup>th</sup> RSC  
506 Roeder Circle  
Fort Snelling, MN 55111-4009

If you have questions about the enclosed information please call me at 312-831-3215.

Very truly yours,

David C. Scharre  
Project Manager

## CLOSURE FORM (PART I)

### CLOSURE CHECKLIST

OWNERSHIP OF TANKS	LOCATION OF TANKS
<p>OWNER NO. 11394                      US ARMY RESERVE                      506 ROEDER CIRCLE                      FORT SNELLING, MN 55111-4009</p>	<p>PERMIT NO. 08175                      FACILITY NO. 702643                      SSG ROY CLIFTON SCOUTEN USARC                      271 HEDGES STREET                      MANSFIELD, OH 44903</p>

**FILING INSTRUCTIONS**

1. IN THE COLUMN ON THE LEFT SIDE OF THE FORM, PLACE EITHER THE PAGE NUMBER OR APPENDIX DESIGNATION WHERE EACH ITEM ON THE CHECKLIST CAN BE FOUND IN THE CLOSURE REPORT OR "N/A" (NOT APPLICABLE) FOR ITEMS THAT DO NOT APPLY TO YOUR CLOSURE REPORT.
2. UST OWNER MUST SIGN WHERE INDICATED AT THE END OF THIS FORM AND ATTACH IT TO THE CLOSURE REPORT. DEFICIENT CLOSURE REPORTS SUBMITTED TO OUR OFFICE WILL BE RETURNED TO THE UST OWNER FOR COMPLETION. SEND THE CLOSURE FORM AND THE CLOSURE REPORT TO THE ATTENTION OF THE "CLOSURE REVIEW SECTION".

**NOTE:** UST OWNER/OPERATORS SHALL SUBMIT ONE COPY OF THE WRITTEN CLOSURE REPORT WHICH SHALL BE RECEIVED BY THE STATE FIRE MARSHAL WITHIN 45 DAYS OF RECEIPT BY THE UST OWNER/OPERATOR OF SOIL AND/OR GROUND WATER LABORATORY ANALYSIS BUT NOT LATER THAN 90 DAYS FROM THE DATE OF COLLECTING SOIL AND/OR GROUND WATER SAMPLES.

**I. UST SYSTEM OWNER, OPERATOR, AND FACILITY DATA**

- 2.1 UST OWNER (NAME; ADDRESS; ZIP CODE; COUNTY; PHONE NO.)
- 2.1 UST OPERATOR (NAME; ADDRESS; ZIP CODE; COUNTY; PHONE NO.)
- 2.2 UST FACILITY LOCATION (NAME; ADDRESS; ZIP CODE; COUNTY; PHONE NO.)
- 2.2 UST FACILITY OWNER (NAME; ADDRESS; ZIP CODE; COUNTY; PHONE NO.)

**II. UST SYSTEM DATA**

- 2.9 DATE OF UST REMOVAL OR ABANDONMENT
- N/A UST SYSTEM AGE (YEARS)
- 1.0 UST CAPACITY (GALLONS)
- 1.0 UST SYSTEM CONSTRUCTION (E.G., STEEL, FIBERGLASS, ETC.)
- N/A DATE UST SYSTEM LAST USED
- N/A PERSON WHO LAST USED UST SYSTEM
- 1.0 SUBSTANCE STORED IN UST BOTH PAST AND PRESENT (E.G. GASOLINE, DIESEL FUEL, USED OIL, ETC.)
- 1.0 UST SYSTEM USE (E.G. RETAIL SALES, RESIDENTIAL, FARM, BUSINESS, ETC.)
- 1.0 UST SYSTEM STATUS (PERMANENTLY REMOVED, ABANDONED-IN-PLACE, CHANGE-IN-SERVICE, OR TEMPORARY CLOSURE BEYOND TWELVE MONTHS)

**III. WASTE DISPOSAL DATA**

- 5.3 DISPOSAL OF UST SYSTEM
- 5.2 DISPOSAL AND FINAL LOCATION OF ANY LIQUIDS FROM UST SYSTEM OR UST SYSTEM EXCAVATION

IV. SAMPLING DATA

(GROUND WATER SAMPLING DATA ONLY REQUIRED IF GROUND WATER ENCOUNTERED DURING CLOSURE ACTIVITIES)

- 4.2 SOIL AND/OR GROUND WATER SAMPLE COLLECTION PROCEDURES
- 4.2 TYPE OF SAMPLE CONTAINERS AND SAMPLE PRESERVATION TECHNIQUES USED FOR SOIL AND/OR GROUND WATER SAMPLES
- 4.1 LABELING NUMBER OR DESIGNATION OF SOIL AND/OR GROUND WATER SAMPLE USED
- 4.1 TYPE OF SAMPLING EQUIPMENT USED (E.G. SPLIT SPOON, SHELBY TUBE, ETC.)
- 4.2 PROCEDURES USED FOR DECONTAMINATION OF SAMPLING EQUIPMENT
- 4.1 FIELD SCREENING METHODOLOGY USED FOR EACH SOIL AND/OR GROUND WATER SAMPLES OBTAINED
- 3.6 TYPE OF FIELD SCREENING INSTRUMENT USED
- V LISTING OF FIELD SCREENING READINGS FOR EACH SOIL AND/OR GROUND WATER SAMPLE OBTAINED
- V CALIBRATION DATE OF FIELD SCREENING INSTRUMENT
- 4.1 LOCATIONS AND DEPTHS OF ALL SOIL AND/OR GROUND WATER SAMPLES OBTAINED
- VIII COPY OF CHAIN OF CUSTODY DOCUMENTATION FOR SOIL AND/OR GROUND WATER SAMPLES SUBMITTED TO LABORATORY
- VIII SAMPLE COLLECTOR NAME AND COMPANY AFFILIATION

V. LABORATORY DATA

(GROUND WATER LABORATORY DATA ONLY REQUIRED IF GROUND WATER ENCOUNTERED DURING CLOSURE ACTIVITIES)

- VIII COPIES OF LABORATORY SAMPLE ANALYSIS DATA SHEETS FOR SOIL AND/OR GROUND WATER SAMPLES
- VIII DATE SOIL AND/OR GROUND WATER SAMPLES COLLECTED
- VIII DATE SOIL AND/OR GROUND WATER SAMPLES RECEIVED BY LABORATORY
- VIII DATE SOIL AND/OR GROUND WATER SAMPLES ANALYZED BY LABORATORY AND TYPE OF MATRIX ANALYZED (SOIL OR WATER)
- VIII NAME, ADDRESS, AND PHONE NUMBER OF LABORATORY AND NAME OF SAMPLE ANALYST
- VIII ANALYTICAL TEST METHODS USED FOR SOIL AND/OR GROUND WATER SAMPLES
- VIII DETECTION/QUANTITATION LIMITS USED FOR LABORATORY TEST METHODS
- N/A DATE OF LABORATORY INSTRUMENT CALIBRATION

VI. MISCELLANEOUS DATA

- 3.0 VISUAL SITE EVALUATION
- V1 SITE MAP ACCURATELY DEPICTING DIMENSIONS OF FACILITY PROPERTY BOUNDARIES, ABOVE GROUND STRUCTURES, ADJACENT STREET LOCATIONS, AND UST SYSTEMS (NUMBER OF TANKS AND PRODUCT LINES)
- N/A MAPPED LOCATIONS OF KNOWN PRIVATE WELLS, PUBLIC WATER WELLS, OR MONITORING WELLS ON FACILITY
- V1 MAPPED LOCATIONS OF ANY UTILITIES EXPOSED DURING UST SYSTEM EXCAVATION
- 3.1 DESCRIPTION OF NATIVE SOILS ENCOUNTERED DURING UST SYSTEM EXCAVATION (E.G. SAND, GRAVEL, CLAY, ETC.)
- 4.1 MAPPED DEPTHS AND LOCATIONS OF ALL SOIL AND/OR GROUND WATER SAMPLES TAKEN FROM EXCAVATION
- V1 MAPPED LOCATION OF UST RECENTLY OR HISTORICALLY REMOVED, ABANDONED-IN-PLACE, OR HAS UNDERGONE A CHANGE IN SERVICE, OR TEMPORARY CLOSURE BEYOND TWELVE MONTHS
- N/A MAPPED LOCATIONS OF OTHER UST STILL IN SERVICE
- V1 MAPPED LENGTH OF UST AND PRODUCT LINE
- V1 MAPPED EXCAVATION LIMITS
- 2.6 CERTIFIED FIRE SAFETY INSPECTOR NAME AND CERTIFICATE NUMBER
- N/A LOCAL FIRE DEPARTMENT (NAME; ADDRESS; ZIP CODE; COUNTY; PHONE)
- I COPY OF 30 DAY CLOSURE NOTIFICATION AND CLOSURE PERMIT

## CLOSURE FORM (PART II)

## CLOSURE FORM (PART III)

### SOIL DISPOSAL/TREATMENT REQUIREMENTS

Please provide the page number or appendix designation where the following items may be found in the closure report:

- 45 Calculated stockpile volume in cubic yards
- 5.1 Description of stockpile storage and staging (e.g., bermed, covered, etc.)
- 4.2 Stockpile sampling and field screening procedures, locations, dates, and results
- VIII Stockpile laboratory reports and chain of custody form

In order to comply with the reporting requirements of OAC 1301:7-9-16, please refer to the Soil Disposal/Treatment Notification Form on the following page. The first page of the Soil Disposal/Treatment Notification Form should be completed for each stockpile generated. The second page of the Soil Disposal/Treatment Notification Form should be completed if the PCS is to be treated at a designated facility.

Please consolidate the Soil Disposal/Treatment Notification Form and related PCS information in a separate section of the closure report. The State Fire Marshal is required to track and manage all information derived from PCS generated in compliance with OAC 1301:7-9-16. Consolidating the PCS information in a separate section of the closure report will facilitate a faster review of the site file.

## CLOSURE FORM (PART IV)

### CLOSURE FORM CERTIFICATION STATEMENT

The following certification statement must be completed by the UST owner/operator. The notarized written statement found at the end of the Soil Disposal/Treatment Notification Form must also be completed if the PCS is to be treated.

*I certify that I have personally examined and that I am familiar with the information submitted in this form, and based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the submitted information is true, accurate, and complete.*

# **Closure Assessment Report Waste Oil Underground Storage Tank SSG Roy Clifton Scouten USARC Facility Mansfield, OH**

## **1.0 Introduction**

The Omaha District, US Army Corps of Engineers (USACE) contracted with Harza Environmental Services, Inc. (Harza) to conduct the permanent closure of a number of underground storage tank (UST) systems at various 88th Regional Support Command (RSC) facilities located in five states. The scope of work at SSG Roy Clifton Scouten US Army Reserve Center (USARC) facility (site) included the permanent closure by removal of a 550-gallon (gal) Waste Oil double-wall fiberglass UST located at the site. The Waste Oil UST was registered with the Bureau of Underground Storage Tank Regulations (BUSTR), Division of State Fire Marshall, Ohio Department of Commerce.

The site consists of a Main Building containing office, training and storage facilities, an OMS (Organization Maintenance Shop) Building containing vehicle maintenance bays, offices, and storage, paved outdoor parking areas, and open grassy areas, as presented in the Site Plan figure in Appendix V. The OWS is located east of the OMS Building and the UST was located west of the OWS system. A sewer drains to the OWS from the vehicle maintenance bays inside the OMS Building. A sewer also drains to the OWS from a sand trap in an outside vehicle wash rack located east of the OWS system. The OWS discharges to a sanitary sewer. According to the facility manager, the OWS is used primarily for vehicle and equipment cleanup. The OWS is seldom used at this facility.

The Waste Oil UST was part of an Oil/Water Separator (OWS) system. Waste oil, collected after washing vehicles, drained into an OWS (Baffle type) where the oil and water were separated by gravity and flotation. The oil, floating on top of water, flowed through a sloped steel pipe into a separate UST. This UST held the waste oil collected after each wash. This Waste Oil UST was removed as part of the closure activities. The outlet of the OWS system was plugged and the OWS remained in the ground for future operations.

The permanent removal of the UST and the sample collections were done according to the Ohio Administrative Code (OAC) 1301:7-9-12 Guidelines. Harza followed the OAC 1301:7-9-12 (L) Guidelines for developing the closure report procedures including the permit process and arranging for a Certified UST Inspector to witness the UST removal. A copy of the 30-Day Closure Notification and Permit form is presented in Appendix I. A copy of the Final Inspection Field Report is not included because the Certified UST Inspector kept it for his records. This site assessment report describes the closure of the UST system.

## **2.0 Site Background Information**

### **2.1 UST Owner/Operator**

US Army Reserve – 88th RSC  
506 Roeder Circle  
Fort Snelling, MN 55111-4009

### **2.2 UST Facility Owner/Location**

Certified Installer No. 10-91-1786  
BHE Environmental Inc.  
4249 Diplomacy Drive  
Columbus, OH 43228

### **2.9 UST Description**

The 550-gal Waste Oil UST was located east of the Maintenance Building next to the heavy vehicles parking garage, as shown in a site sketch presented in Figure 1 in Appendix V. As described above, the UST system was part of the USARC

OWS system operation. The double-wall fiberglass UST was an extension to the steel baffle-type OWS where the washed waste oil was stored. No information was available on the exact installation date and the age of the UST system. This UST was 4 feet (ft) in diameter and 6 ft long and contained approximately 550 gal of waste oil and water mixture before its removal. The 550-gal double-wall fiberglass UST was manufactured by Owens/Corning and had the Underwriters Laboratory (UL) Serial No. 79866. The piping connecting the two was made of steel. The OWS along with the UST was not in use at the time of removal. No information was available on the date or the person who last used the UST system. There was no alarm system or leak detection gauge visible on the UST before excavation.

The geographic reference of the site indicates that this UST, located in the Richland County, was not in a sensitive area. The UST was removed from the ground on December 2, 1998. Upon removal of the UST from the ground, the tank was in good condition and no holes were observed. A total of approximately 600 gal of waste oil and water mixture, sludge and rinsate was removed from the UST during removal activities. The UST excavation was backfilled with the excavated round pea gravel. A detailed description on the disposal of the waste oil contents with proper manifests is provided in Section 3.4. The tank was removed from the ground, cleaned, rendered useless and disposed on December 2, 1998. Harza was involved as the oversight consultant on behalf of USACE for the UST removal activities that were performed by BHE, the UST removal contractor.

### **3.0 Tank Removal Process**

#### **3.1 UST Removal Procedure**

A day before any digging for the UST removal, utility clearances were obtained at the UST location. The 550-gal Waste Oil UST was under 6 inches (6") thick concrete slab, which was saw cut and removed before any excavations began. After the UST contents were removed, the UST was excavated to expose the side sections of the UST. Excavation for the steel pipe connecting to the OWS system was conducted next so that the steel pipe could be cut and the waste oil mixture drained back into the UST. The UST was installed on a 12" thick concrete pad underneath with one metallic anchor strap on each end to hold it. The metallic anchors were broken to remove the UST. All steel piping were disconnected and removed. The internal atmosphere of the UST was tested frequently to ensure that the lower explosive limit (LEL) reading was below 20% at all times. No defuming of the UST was required as the LEL reading was never above 20%. During UST excavation, perched water from neighboring soils was entering the hole. The certified UST inspector confirmed that it was perched water and not groundwater, because the groundwater at this location was more than 20 ft deep.

The UST was then removed from the excavation hole and placed on the ground for cleanup.

The visual site evaluation of the UST system revealed no evidence of any operational problems. The double-wall fiberglass UST condition was good with the manufacturing label still visible, upon removal from the ground. On the ground, the UST had no signs of any tear, leakage or damage to the double-wall fiberglass tank. There was no indication of any concrete staining, surface soil staining or pipe joint leaks during the removal operation. The tank was placed in a tilted position to drain the remaining waste oil mixture. The concrete pad was left in the excavation bottom.

The backfill material consisted of round pea gravel and was placed on a plastic tarp after excavation. The backfill material had no visual observation of any stain or contamination. The native soil is clayey soil, brown in color. All the excavated backfill was returned into the hole. In addition to the pea gravel backfill, approximately 4 cubic yards of clean backfill material consisting of crushed stone was brought to the site by Four Seasons Environmental to fill the hole. The excavated hole was compacted in 6 to 12 inch lifts using backhoe bucket and graded. The surface restoration of the site will be performed by USACE.

### **3.2 UST Atmosphere Monitoring**

The UST internal atmosphere was monitored by BHE with an explosimeter (combustible gas and oxygen meter) Model 261 manufactured by Mine Safety Appliances (MSA). The UST internal atmosphere and the excavation area were also tested with the LEL-O<sub>2</sub> meter to assure that the LEL reading remained less than 20 % during the removal process.

The instrument was calibrated in the morning using manufacturer recommended calibration gas. Prior to each reading, the instrument was cleared and reset. The internal atmosphere of the empty UST was monitored by lowering the explosimeter probe down the manhole and obtaining readings near the bottom, middle, and upper parts of the UST.

### **3.3 UST Contents Sampling**

Consistent with the OAC 1301:7-9-12 Guidelines, the UST contents were analyzed before proper disposal by BHE. A total of eleven 55-gal drums (approximately 550 gal) were used to store on site, the waste oil and water mixture pumped from the UST. A sample was collected from one of the drums and sent for characterization to a certified laboratory before disposal. A detailed description on the amount and analytical description of the UST contents will be provided at a later date. The analytical results are presented in Appendix III.

### **3.4 Removal of Product and Sludge**

The PVC pipe leading to the OWS system was cut and drained back into the UST. The outlet of the OWS was plugged, after the product in the piping was drained. As reported earlier, total of approximately 600 gal of waste oil and water mixture, sludge and rinsate were removed from the UST on December 2, 1998. A total of twelve (12) 55-gal drums were used to store the contents of the UST. Out of these twelve 55-gal drums, eleven (11) drums contained the waste oil and water mixture and the remaining one drum contained waste oil sludge and rinsate collected after cleaning of UST.

### **3.5 Tank Cleaning**

The inside of the Waste Oil UST was cleaned by BHE. After testing its internal atmosphere, the tank was cut open at one end and decontaminated in place with safety adsorbents. The tank was triple-steam rinsed and the generated sludge and rinsate were collected and contained in one 55-gal drum. This drum of waste oil sludge will be transported and disposed at a later date. A copy of the manifest is presented in Appendix II.

### **3.6 Soil Vapor Monitoring**

During excavation for the UST, the excavated backfill pea gravel surrounding the UST was continuously monitored using a Photo-Ionization Detector (PID) Model MiniRAE. The PID is capable of detecting volatile hydrocarbon vapors in the 1-100 ppm range. Prior to each reading, the instrument was cleared and reset. Excavated backfill material samples were tested by extracting a fresh sample and splitting into two from a depth of 4 to 6 inches below the exposed surface. Each excavated sample was placed into a fresh plastic bag and the headspace was analyzed with the PID. This allowed to alleviate the potential for false readings from volatilization caused by moving air and evaporation. The sample was collected from the highest field reading.

The PID readings were taken at different intervals during the removal of the Waste Oil UST. No PID readings were obtained from the stockpiled excavated backfill materials. A copy of the field readings is presented in Appendix IV.

## **4.0 Site Assessment**

A site assessment for the UST was conducted on December 2, 1998 in accordance with the OAC 1301:7-9-12 (K) 4(c) sampling requirements for permanent UST closure by removal.

#### 4.1 Soil Sampling Locations

The soil sample locations for the closure site assessment were taken to check for any contamination. Overall, three samples were collected for this 550-gal Waste Oil UST. Two grab samples were taken from the excavation floor, one at either end of the UST. The grab samples from the bottom of the excavation were collected from the East and West ends of the UST, 2 feet below the surface of the native soil, clayey brown in color. The sample locations were within one foot of either end of the concrete pad.

Since the volume of the excavated backfill material was more than 25 cubic yards, six headspace readings were taken as required by OAC 1301:7-9-12 Guidelines. One grab sample was collected from the backfill material. The sample with the highest field screening reading was selected for laboratory analysis. Since there were no headspace readings observed, one sample was collected from the north side of the excavated pile (Pile #1). No pipeline sample was taken as the piping run was only 4 feet between the UST and the OWS system, less than the required twenty feet.

The sample identification numbers are labeled as OH037-VOC@-1298 and OH037-TPH@-1298, where @ represents the location. The sampling locations, the sample identification numbers, and the layout of the excavation hole are shown in Appendix V.

#### 4.2 Soil Sampling Procedure

The soil sampling procedures for the closure samples were followed using the OAC 1301:7-9-12 Guidelines for UST site assessments. All samples were collected in native soil, 2 feet below the surface. A field location map was generated during the site assessment and is presented in Figure 1 in Appendix V. All samples collected for this UST were analyzed for Volatile Organic Aromatics (VOA) and Total Petroleum Hydrocarbons (TPH). As specified in the guidelines, soil samples for VOA and TPH analysis were collected in 4 oz. clear wide mouth container with teflon lined septa caps. No preservatives were used for either analyses. The samples were then placed in a cooler with ice bags to keep them below a temperature of 4°C.

All samples were collected using disposable gloves. The disposable gloves were replaced after every sample collection. Soil samples in the excavation hole were performed using a backhoe. For the excavated backfill sampling, hand was used to collect the sample 1 foot inside the backfill. Decontamination of all equipment was carried with double rinse of Alconox followed by triple rinse of distilled water. After collection of all samples, samples were neatly labeled and packed for shipment to laboratory. For shipping to the laboratory, a Quality Assurance/Quality Control (QA/QC) sample was also sent in addition to the

regular samples. The QA/QC sample was a regular trip blank (Laboratory prepared sample, VOC vial containing 40 ml distilled water).

Samples were collected by Harza. All samples collected and shipped were identified in a Chain of Custody (C.O.C.) sheet. All samples including duplicate copies of the C.O.C. were shipped next day via Federal Express. A copy of the C.O.C. is presented in Appendix VII.

### **4.3 Soil Analytical Results**

The samples were analyzed for VOA analysis using EPA Method 8260 (previously 8240) and for TPH analysis using EPA Method 418.1R (previously 418.1). All analyses for this site were performed by a certified laboratory, Great Lakes Analytical, Buffalo Grove, IL. For VOA analysis, the analytical results indicated that all three samples were non-detect. Also, for TPH analysis analytical results indicated that all three samples were non-detect. The analytical results for the soil samples and a copy of the C.O.C. are presented in Appendix VII.

## **5.0 Disposal of Waste Materials**

### **5.1 Soil Disposal**

During removal of the UST, the size of the excavation hole was 12 ft 1 in x 11ft 4 in x 8ft 11in, a total of about 1221 cubic feet (approximately 45 cubic yards). As described in Section 3.1, the excavation backfill material was stockpiled (Pile # 1) over a liner. No soil was disposed off-site. No readings were obtained from the excavated stockpile, Pile # 1, and there were no visual signs of any stain or any odor. All the 45 cubic yards of excavated backfill soil was returned into the hole for restoration purposes. A copy of the Soil Disposal/Treatment Notification Form is included in Appendix VI.

### **5.2 UST Contents Disposal**

A total of approximately 600 gal of waste oil and waster mixture, sludge and rinsate was removed from the UST during removal activities performed on December 2, 1998. A total of twelve (12) 55-gal drums were used to store the contents of the UST.

Eleven (11) 55-gal drums (approximately 550 gal) of waste oil and water mixture pumped from the UST stored on site will be hauled off site for disposal at a later date. UST contents will be manifested for off-site transportation. A copy of the manifest is presented in Appendix IV.

One 55-gal drum of waste oil contaminated sludge and rinsate produced after cleaning of the tank will be disposed at a later date. A copy of the manifest is presented in Appendix II.

The concrete pad was left in the excavation prior to backfilling the hole with pea gravel.

### **5.3 UST Disposal**

The double-wall fiberglass UST which was removed, cleaned and rendered useless was disposed of at Four Seasons Environmental, Groveport, OH on December 2, 1998. A copy of the disposal receipt is presented in Appendix VIII.

## **6.0 Site Restoration**

The site was restored on December 2, 1998. All the excavated pea gravel backfill was returned into the hole. In addition to the pea gravel backfill, approximately 4 cubic yards of clean backfill material consisting of crushed stone was brought to the site by Four Seasons Environmental to fill the hole. The soil was compacted in accordance with contract specifications with 6-12 inch lifts and compaction using backhoe bucket. Final surface restoration will be performed by USACE.

## **7.0 Conclusions**

Based on the laboratory analytical results for all confirmation closure samples, all VOAs and TPH analyses were found below detection limits. Therefore, a clean closure letter for this 550-gal double-wall fiberglass UST (Facility ID# 702643) located at Mansfield, OH is warranted.

MEMORANDUM FOR Ohio Bureau of Underground Storage Tanks

ATTN: James Johnson, 6606 Tussing Road – P.O. Box 687  
Reynoldsburg, OH 43068-9009

SUBJECT: Registration for Underground Storage Tanks (USTs) in Ohio

1. Attached are five UST registration forms for separate Army Reserve Centers in Ohio. The Reserve Centers are located in Akron, Bellaire, Mansfield, Sharonville, and Warrensville Heights.
2. Please forward the tank registration numbers to me after the registration forms have been processed. If you have any questions about the information that I have provided on the registration forms, please do not hesitate to contact me at 1-800-843-2769 ext. 3821.

Environmental Protection Specialist

REGISTRATION FOR UNDERGROUND STORAGE TANKS	FEE SCHEDULE
BUREAU OF UNDERGROUND STORAGE TANKS 6606 TUSSING ROAD - P O. BOX 687 REYNOLDSBURG, OHIO 43068-9009	1989: \$20.00 PER TANK OTHER YEARS: \$25.00 PER TANK
NEW      AMENDED      CHANGE IN OWNERSHIP      ANNUAL RENEWAL (CIRCLE ONE)	
<u>Conditions Requiring Registration of an UST</u> <ol style="list-style-type: none"> <li>1. Administrative Code Section 1301:7-9-04(D) requires that any person to whom ownership of any UST is transferred shall, within 30 days of the transfer, submit a transfer of UST registration application to the Fire Marshal for each location where an UST subject to the transfer is located. The transfer of ownership fee is \$25.00 per UST.</li> <li>2. Any owner who installs an UST system shall, within thirty days of bringing such UST system into service, submit the registration application to the Fire Marshal along with appropriate fees.</li> <li>3. If an UST system is installed at a location for which there is a current registration, the owner of the UST system must submit an amended registration along with the appropriate fees to the Fire Marshal within thirty days of bringing the system into service.</li> <li>4. If an UST system was taken out of service after January 1, 1974, not in compliance with the Ohio Fire Code, the tank must be registered.</li> </ol>	
<u>Tank Registration Application Fee:</u> Each tank registration application must be accompanied by a fee made payable to: "Treasurer, State of Ohio". <b>NOTE:</b> Federal, State and political subdivisions are exempt from paying the fee but they must comply with all other requirements of the underground tank registration rule, including the completion of this form.	
<u>When Can A Tank Registration Be Denied?</u> The State Fire Marshal shall deny a tank registration for the following reason: <ol style="list-style-type: none"> <li>1. The application does not provide all the information indicated on the prescribed form.</li> <li>2. The owner did not submit the tank registration fee required.</li> </ol>	
<u>Exempt USTs</u> <ol style="list-style-type: none"> <li>1. Farm and residential tanks holding 1,100 gallons or less of motor fuel used for non-commercial purposes.</li> <li>2. Tanks storing heating oil and kerosene for consumptive use on the premises where stored.</li> <li>3. Underground storage tanks holding 110 gallons or less.</li> <li>4. Septic tanks and systems for collecting storm water and wastewater.</li> </ol>	
<u>Penalties</u> Any person who knowingly fails to register or submits false information may be subject to a civil penalty not to exceed \$10,000.00 for each day the registration is late or for which false information is submitted. Any person who knowingly fails to register or submits false information may be subject to conviction of an unclassified felony with a maximum fine of \$25,000.00 and maximum imprisonment of 14 months.

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

### FEDERAL RECORDS

**CORRACTS:** CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/15/2006 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

### STATE AND LOCAL RECORDS

**DERR:** The DERR database is an index of sites for which Ohio EPA maintains files. It includes sites with known or suspected contamination, but a site's inclusion in the database does not mean that it is now or has ever been contaminated.

A review of the DERR list, as provided by EDR, and dated 03/14/2006 has revealed that there are 3

## EXECUTIVE SUMMARY

DERR sites within approximately 1 mile of the target property.

### EDR PROPRIETARY RECORDS

**EDR Manufactured Gas Plants:** The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the Manufactured Gas Plants list, as provided by EDR, has revealed that there is 1 Manufactured Gas Plants site within approximately 1 mile of the target property.

Other Pertinent Environmental Activity Identified at Site:  
 The OH-CORE (Ohio - Core) database contains information commonly shared among the Ohio EPA environmental programs. The information is facility-based, general in nature, and used to support specific programmatic systems while simultaneously maintaining an inventory of common facility-related data. Specific programmatic details are maintained in programmatic databases.  
  
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Other Pertinent Environmental Activity Identified at Site:

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

The OH-CORE (Ohio - Core) database contains information commonly shared among the Ohio EPA environmental programs. The information is facility-based, general in nature, and used to support specific programmatic systems while simultaneously maintaining an inventory of common facility-related data. Specific programmatic details are maintained in programmatic databases.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

## EPA Waste Codes Addendum

Code	Description
D002	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
D007	CHROMIUM
D008	LEAD
F006	WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## **FEDERAL RECORDS**

### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 04/19/2006	Source: EPA
Date Data Arrived at EDR: 05/05/2006	Telephone: N/A
Date Made Active in Reports: 05/22/2006	Last EDR Contact: 05/05/2006
Number of Days to Update: 17	Next Scheduled EDR Contact: 07/31/2006
	Data Release Frequency: Quarterly

### **NPL Site Boundaries**

### **Proposed NPL: Proposed National Priority List Sites**

Date of Government Version: 04/19/2006	Source: EPA
Date Data Arrived at EDR: 05/05/2006	Telephone: N/A
Date Made Active in Reports: 05/22/2006	Last EDR Contact: 05/05/2006
Number of Days to Update: 17	Next Scheduled EDR Contact: 07/31/2006
	Data Release Frequency: Quarterly

### **DELISTED NPL: National Priority List Deletions**

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/19/2006	Source: EPA
Date Data Arrived at EDR: 05/05/2006	Telephone: N/A
Date Made Active in Reports: 05/22/2006	Last EDR Contact: 05/05/2006
Number of Days to Update: 17	Next Scheduled EDR Contact: 07/31/2006
	Data Release Frequency: Quarterly

### **NPL RECOVERY: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267
Date Made Active in Reports: 03/30/1994	Last EDR Contact: 05/23/2006
Number of Days to Update: 56	Next Scheduled EDR Contact: 08/21/2006
	Data Release Frequency: No Update Planned

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## **CERCLIS:** Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/01/2006	Source: EPA
Date Data Arrived at EDR: 03/21/2006	Telephone: 703-413-0223
Date Made Active in Reports: 04/13/2006	Last EDR Contact: 06/22/2006
Number of Days to Update: 23	Next Scheduled EDR Contact: 09/18/2006
	Data Release Frequency: Quarterly

## **CERCLIS-NFRAP:** CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 02/01/2006	Source: EPA
Date Data Arrived at EDR: 03/21/2006	Telephone: 703-413-0223
Date Made Active in Reports: 04/13/2006	Last EDR Contact: 06/23/2006
Number of Days to Update: 23	Next Scheduled EDR Contact: 09/18/2006
	Data Release Frequency: Quarterly

## **CORRACTS:** Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 03/15/2006	Source: EPA
Date Data Arrived at EDR: 03/17/2006	Telephone: 800-424-9346
Date Made Active in Reports: 04/13/2006	Last EDR Contact: 05/21/2006
Number of Days to Update: 27	Next Scheduled EDR Contact: 09/04/2006
	Data Release Frequency: Quarterly

## **RCRA:** Resource Conservation and Recovery Act Information

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/09/2006	Source: EPA
Date Data Arrived at EDR: 04/27/2006	Telephone: 800-424-9346
Date Made Active in Reports: 05/30/2006	Last EDR Contact: 06/28/2006
Number of Days to Update: 33	Next Scheduled EDR Contact: 08/21/2006
	Data Release Frequency: Quarterly

## **ERNS:** Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 12/31/2005	Source: National Response Center, United States Coast Guard
Date Data Arrived at EDR: 01/12/2006	Telephone: 202-260-2342
Date Made Active in Reports: 02/21/2006	Last EDR Contact: 04/26/2006
Number of Days to Update: 40	Next Scheduled EDR Contact: 07/24/2006
	Data Release Frequency: Annually

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## **HMIRS:** Hazardous Materials Information Reporting System

Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT.

Date of Government Version: 12/31/2005	Source: U.S. Department of Transportation
Date Data Arrived at EDR: 04/14/2006	Telephone: 202-366-4555
Date Made Active in Reports: 05/30/2006	Last EDR Contact: 04/14/2006
Number of Days to Update: 46	Next Scheduled EDR Contact: 07/17/2006
	Data Release Frequency: Annually

## **US ENG CONTROLS:** Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 03/21/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/27/2006	Telephone: 703-603-8905
Date Made Active in Reports: 05/22/2006	Last EDR Contact: 07/03/2006
Number of Days to Update: 56	Next Scheduled EDR Contact: 10/02/2006
	Data Release Frequency: Varies

## **US INST CONTROL:** Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 03/21/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/27/2006	Telephone: 703-603-8905
Date Made Active in Reports: 05/22/2006	Last EDR Contact: 07/03/2006
Number of Days to Update: 56	Next Scheduled EDR Contact: 10/02/2006
	Data Release Frequency: Varies

## **DOD:** Department of Defense Sites

This data set consists of federally owned or administered lands, administered by the Department of Defense, that have any area equal to or greater than 640 acres of the United States, Puerto Rico, and the U.S. Virgin Islands.

Date of Government Version: 12/31/2004	Source: USGS
Date Data Arrived at EDR: 02/08/2005	Telephone: 703-692-8801
Date Made Active in Reports: 08/04/2005	Last EDR Contact: 05/12/2006
Number of Days to Update: 177	Next Scheduled EDR Contact: 08/07/2006
	Data Release Frequency: Semi-Annually

## **FUDS:** Formerly Used Defense Sites

The listing includes locations of Formerly Used Defense Sites properties where the US Army Corps of Engineers is actively working or will take necessary cleanup actions.

Date of Government Version: 12/05/2005	Source: U.S. Army Corps of Engineers
Date Data Arrived at EDR: 01/19/2006	Telephone: 202-528-4285
Date Made Active in Reports: 02/21/2006	Last EDR Contact: 07/03/2006
Number of Days to Update: 33	Next Scheduled EDR Contact: 10/02/2006
	Data Release Frequency: Varies

## **US BROWNFIELDS:** A Listing of Brownfields Sites

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Date of Government Version: 04/26/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 04/27/2006	Telephone: 202-566-2777
Date Made Active in Reports: 05/30/2006	Last EDR Contact: 06/12/2006
Number of Days to Update: 33	Next Scheduled EDR Contact: 09/11/2006
	Data Release Frequency: Semi-Annually

### **CONSENT:** Superfund (CERCLA) Consent Decrees

Major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites. Released periodically by United States District Courts after settlement by parties to litigation matters.

Date of Government Version: 12/14/2004	Source: Department of Justice, Consent Decree Library
Date Data Arrived at EDR: 02/15/2005	Telephone: Varies
Date Made Active in Reports: 04/25/2005	Last EDR Contact: 03/13/2006
Number of Days to Update: 69	Next Scheduled EDR Contact: 07/24/2006
	Data Release Frequency: Varies

### **ROD:** Records Of Decision

Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 04/13/2006	Source: EPA
Date Data Arrived at EDR: 04/28/2006	Telephone: 703-416-0223
Date Made Active in Reports: 05/30/2006	Last EDR Contact: 07/06/2006
Number of Days to Update: 32	Next Scheduled EDR Contact: 10/02/2006
	Data Release Frequency: Annually

### **UMTRA:** Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

Date of Government Version: 11/04/2005	Source: Department of Energy
Date Data Arrived at EDR: 11/28/2005	Telephone: 505-845-0011
Date Made Active in Reports: 01/30/2006	Last EDR Contact: 06/21/2006
Number of Days to Update: 63	Next Scheduled EDR Contact: 09/18/2006
	Data Release Frequency: Varies

### **ODI:** Open Dump Inventory

An open dump is defined as a disposal facility that does not comply with one or more of the Part 257 or Part 258 Subtitle D Criteria.

Date of Government Version: 06/30/1985	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/09/2004	Telephone: 800-424-9346
Date Made Active in Reports: 09/17/2004	Last EDR Contact: 06/09/2004
Number of Days to Update: 39	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

**TRIS:** Toxic Chemical Release Inventory System

Toxic Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.

Date of Government Version: 12/31/2003	Source: EPA
Date Data Arrived at EDR: 07/13/2005	Telephone: 202-566-0250
Date Made Active in Reports: 08/17/2005	Last EDR Contact: 06/22/2006
Number of Days to Update: 35	Next Scheduled EDR Contact: 09/18/2006
	Data Release Frequency: Annually

**TSCA:** Toxic Substances Control Act

Toxic Substances Control Act. TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site.

Date of Government Version: 12/31/2002	Source: EPA
Date Data Arrived at EDR: 04/14/2006	Telephone: 202-260-5521
Date Made Active in Reports: 05/30/2006	Last EDR Contact: 04/12/2006
Number of Days to Update: 46	Next Scheduled EDR Contact: 07/17/2006
	Data Release Frequency: Every 4 Years

**FTTS:** FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)

FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act). To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 03/29/2006	Source: EPA/Office of Prevention, Pesticides and Toxic Substances
Date Data Arrived at EDR: 04/26/2006	Telephone: 202-566-1667
Date Made Active in Reports: 05/30/2006	Last EDR Contact: 06/19/2006
Number of Days to Update: 34	Next Scheduled EDR Contact: 09/18/2006
	Data Release Frequency: Quarterly

**FTTS INSP:** FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)

Date of Government Version: 03/31/2006	Source: EPA
Date Data Arrived at EDR: 04/26/2006	Telephone: 202-566-1667
Date Made Active in Reports: 05/30/2006	Last EDR Contact: 06/19/2006
Number of Days to Update: 34	Next Scheduled EDR Contact: 09/18/2006
	Data Release Frequency: Quarterly

**SSTS:** Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 12/31/2004	Source: EPA
Date Data Arrived at EDR: 05/11/2006	Telephone: 202-564-4203
Date Made Active in Reports: 05/22/2006	Last EDR Contact: 03/06/2006
Number of Days to Update: 11	Next Scheduled EDR Contact: 07/17/2006
	Data Release Frequency: Annually

**ICIS:** Integrated Compliance Information System

The Integrated Compliance Information System (ICIS) supports the information needs of the national enforcement and compliance program as well as the unique needs of the National Pollutant Discharge Elimination System (NPDES) program.

Date of Government Version: 02/13/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 04/21/2006	Telephone: 202-564-5088
Date Made Active in Reports: 05/11/2006	Last EDR Contact: 04/11/2006
Number of Days to Update: 20	Next Scheduled EDR Contact: 07/17/2006
	Data Release Frequency: Quarterly

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## **PADS:** PCB Activity Database System

PCB Activity Database. PADS Identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

Date of Government Version: 12/27/2005	Source: EPA
Date Data Arrived at EDR: 02/08/2006	Telephone: 202-566-0500
Date Made Active in Reports: 02/27/2006	Last EDR Contact: 06/28/2006
Number of Days to Update: 19	Next Scheduled EDR Contact: 08/07/2006
	Data Release Frequency: Annually

## **MLTS:** Material Licensing Tracking System

MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 04/12/2006	Source: Nuclear Regulatory Commission
Date Data Arrived at EDR: 04/26/2006	Telephone: 301-415-7169
Date Made Active in Reports: 05/30/2006	Last EDR Contact: 07/03/2006
Number of Days to Update: 34	Next Scheduled EDR Contact: 10/02/2006
	Data Release Frequency: Quarterly

## **MINES:** Mines Master Index File

Contains all mine identification numbers issued for mines active or opened since 1971. The data also includes violation information.

Date of Government Version: 02/09/2006	Source: Department of Labor, Mine Safety and Health Administration
Date Data Arrived at EDR: 03/29/2006	Telephone: 303-231-5959
Date Made Active in Reports: 05/30/2006	Last EDR Contact: 06/28/2006
Number of Days to Update: 62	Next Scheduled EDR Contact: 09/25/2006
	Data Release Frequency: Semi-Annually

## **FINDS:** Facility Index System/Facility Registry System

Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 04/27/2006	Source: EPA
Date Data Arrived at EDR: 05/02/2006	Telephone: N/A
Date Made Active in Reports: 05/30/2006	Last EDR Contact: 04/03/2006
Number of Days to Update: 28	Next Scheduled EDR Contact: 07/03/2006
	Data Release Frequency: Quarterly

## **RAATS:** RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995	Source: EPA
Date Data Arrived at EDR: 07/03/1995	Telephone: 202-564-4104
Date Made Active in Reports: 08/07/1995	Last EDR Contact: 06/05/2006
Number of Days to Update: 35	Next Scheduled EDR Contact: 09/04/2006
	Data Release Frequency: No Update Planned

## **BRS:** Biennial Reporting System

The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

## STATE AND LOCAL RECORDS

**SHWS:** This state does not maintain a SHWS list. See the Federal CERCLIS list and Federal NPL list.  
State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

**DERR:** Division of Emergency & Remedial Response's Database

The DERR listings contains sites from all of Ohio that are in the Division of Emergency and Remedial Response (DERR) database, which is an index of sites for which our district offices maintain files. The database is NOT a record of contaminated sites or sites suspected of contamination. Not all sites in the database are contaminated, and a site's absence from the database does not imply that it is uncontaminated.

Date of Government Version: 03/14/2006

**SWF/LF:** Licensed Solid Waste Facilities

Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Data Release Frequency: Quarterly

## **SPILLS:** Emergency Response Database

Incidents reported to the Emergency Response Unit. The focus of the ER program is to minimize the impact on the environment from accidental releases, spills, and unauthorized discharges from any fixed or mobile sources. Incidents involving petroleum products, hazardous materials, hazardous waste, abandoned drums, or other materials which may pose as a pollution threat to the state's water, land, or air should be reported immediately. Not all incidents included in the database are actual SPILLS, they can simply be reported incidents.

## **NPDES:** NPDES General Permit List

General information regarding NPDES (National Pollutant Discharge Elimination System) permits.

Date of Government Version: 05/02/2006	Source: Ohio EPA
Date Data Arrived at EDR: 06/02/2006	Telephone: 614-644-2031
Date Made Active in Reports: 06/28/2006	Last EDR Contact: 06/02/2006
Number of Days to Update: 26	Next Scheduled EDR Contact: 09/04/2006
	Data Release Frequency: Semi-Annually

## **USD:** Urban Setting Designation Sites

A USD may be requested for properties participating in the VAP when there is no current or future use of the ground water by local residents for drinking, showering, bathing or cooking. In these areas, an approved USD would lower the cost of cleanup and promote economic redevelopment while still protecting public health and safety. If these USDs were to be approved, the ground water cleanup or response requirements for the areas could be lessened. The Ohio EPA director may approve a USD request based on a demonstration that the USD requirements are met and an evaluation of existing and future uses of ground water in the area. The Ohio EPA director's decision on approval or denial of the request is needed before cleanup requirements for the site can be determined.

Date of Government Version: 03/15/2006	Source: Ohio EPA
Date Data Arrived at EDR: 04/25/2006	Telephone: 614-644-3749
Date Made Active in Reports: 05/11/2006	Last EDR Contact: 06/07/2006
Number of Days to Update: 16	Next Scheduled EDR Contact: 09/04/2006
	Data Release Frequency: Varies

## **HIST INST CONTROLS:** Institutional Controls Database

"Institutional control" is a restriction that is recorded in the same manner as a deed which limits access to or use of the property such that exposure to hazardous substances or petroleum are effectively and reliably eliminated or mitigated. Examples of institutional controls include land and water use restrictions. This database is no longer updated or maintained by the state agency.

Date of Government Version: 05/10/2005	Source: Ohio EPA
Date Data Arrived at EDR: 04/06/2006	Telephone: 614-644-3749
Date Made Active in Reports: 05/04/2006	Last EDR Contact: 06/05/2006
Number of Days to Update: 28	Next Scheduled EDR Contact: 09/04/2006
	Data Release Frequency: No Update Planned

## **HIST ENG CONTROLS:** Operation & Maintenance Agreements Database

Volunteers that complete a voluntary action that relies on the ongoing operation and maintenance (O&M) of an engineered control to make the site protective (e.g. cap systems and ground water treatment systems) must enter into a legally binding agreement with the Ohio EPA before the director issues a covenant not to sue. This O&M Agreement must describe how the remedy is constructed and how it will be monitored, maintained and repaired. It also lays out inspection opportunities for the agency. Companies must document that they have the financial capability to operate any remedy relied on, before the agency will agree to enter into the O&M Agreement. The statute requires that the agency be notified of any change in ownership. This database is no longer updated or maintained by the state agency.

Date of Government Version: 05/10/2005	Source: Ohio EPA
Date Data Arrived at EDR: 04/04/2006	Telephone: 614-644-3749

## EDR PROPRIETARY RECORDS

### **Manufactured Gas Plants:** EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

### **CT MANIFEST:** Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 12/31/2004	Source: Department of Environmental Protection
Date Data Arrived at EDR: 02/17/2006	Telephone: 860-424-3375
Date Made Active in Reports: 04/07/2006	Last EDR Contact: 06/14/2006

**Oil/Gas Pipelines:** This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

## **Electric Power Transmission Line Data**

Source: PennWell Corporation  
Telephone: (800) 823-6277

This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

## **AHA Hospitals:**

Source: American Hospital Association, Inc.  
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

## **Medical Centers: Provider of Services Listing**

Source: Centers for Medicare & Medicaid Services  
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

## **Nursing Homes**

Source: National Institutes of Health  
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

## **Public Schools**

Source: National Center for Education Statistics  
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

## **Private Schools**

Source: National Center for Education Statistics  
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

## **Daycare Centers: Licensed Child Day Care Facilities**

Source: Department of Job & Family Services  
Telephone: 614-466-6282

**Flood Zone Data:** This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

## **State Wetlands Data: Wetlands Inventory**

Source: Department of Natural Resources  
Telephone: 614-265-1044

## **Scanned Digital USGS 7.5' Topographic Map (DRG)**

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

UTM X (Meters): 372532.8  
UTM Y (Meters): 4512001.5  
Elevation: 1286 ft. above sea level

### USGS TOPOGRAPHIC MAP

Target Property Map: 40082-G5 MANSFIELD NORTH, OH  
Most Recent Revision: 1982

East Map: 40082-G4 PAVONIA, OH  
Most Recent Revision: 1982

Southeast Map: 40082-F4 LUCAS, OH  
Most Recent Revision: 1982

South Map: 40082-F5 MANSFIELD SOUTH, OH  
Most Recent Revision: 1982

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

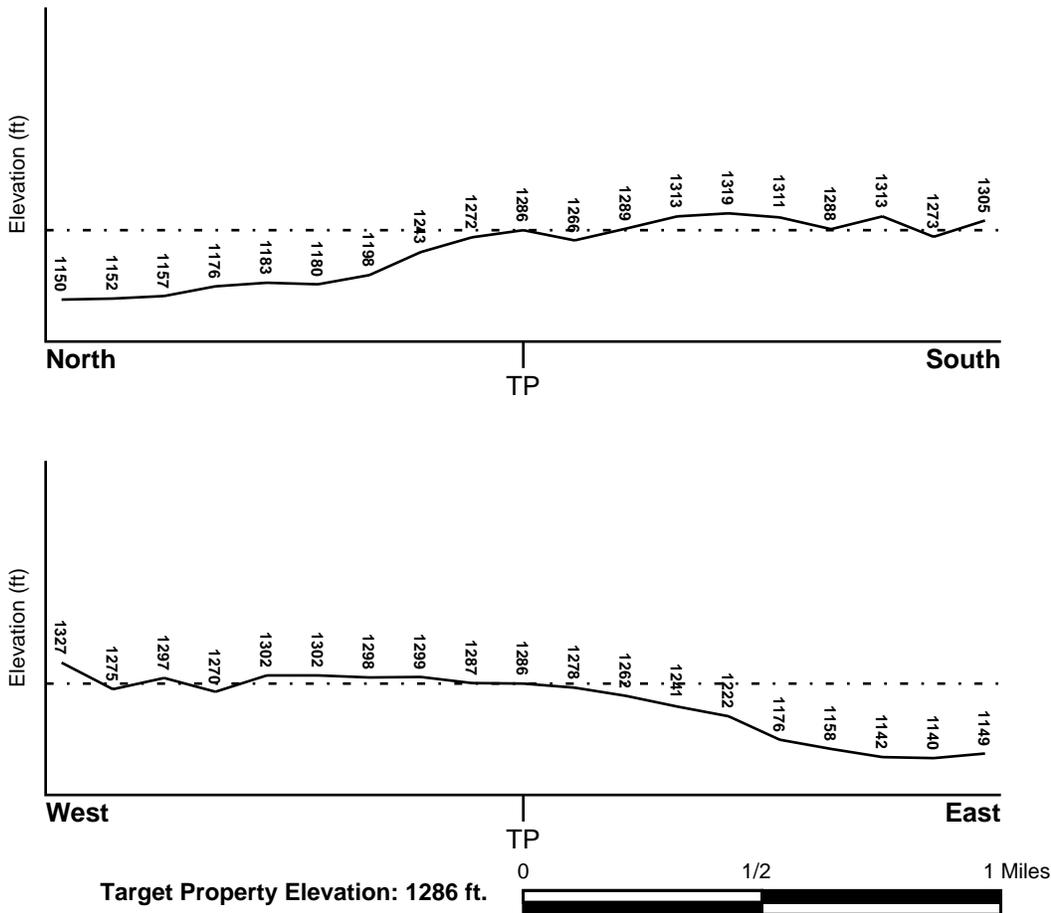

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NE

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## **HYDROLOGIC INFORMATION**

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## **FEMA FLOOD ZONE**

<u>Target Property County</u>	<u>FEMA Flood Electronic Data</u>
RICHLAND, OH	Not Available

Flood Plain Panel at Target Property: Not Reported

Additional Panels in search area: Not Reported

## **NATIONAL WETLAND INVENTORY**

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
MANSFIELD NORTH	Not Available

## **HYDROGEOLOGIC INFORMATION**

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## **AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

## GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

### ROCK STRATIGRAPHIC UNIT

Era: Paleozoic  
System: Mississippian  
Series: Mississippian  
Code: M (decoded above as Era, System & Series)

### GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

## DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: CANFIELD  
Soil Surface Texture: gravelly - silt loam  
Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.  
Soil Drainage Class: Moderately well drained. Soils have a layer of low hydraulic conductivity, wet state high in the profile. Depth to water table is 3 to 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: MODERATE

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	10 inches	gravelly - silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 2.00 Min: 0.60	Max: 7.30 Min: 4.50
2	10 inches	26 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 2.00 Min: 0.60	Max: 5.50 Min: 4.50
3	26 inches	55 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 0.20 Min: 0.06	Max: 7.30 Min: 4.50
4	55 inches	72 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 0.20 Min: 0.06	Max: 7.80 Min: 5.10

### OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam

Surficial Soil Types: silt loam

Shallow Soil Types: silt loam

Deeper Soil Types: stratified  
unweathered bedrock

### LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

## TOPOGRAPHIC INFORMATION

### **USGS 7.5' Digital Elevation Model (DEM)**

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### **Scanned Digital USGS 7.5' Topographic Map (DRG)**

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

## HYDROLOGIC INFORMATION

**Flood Zone Data:** This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

### **State Wetlands Data: Wetlands Inventory**

Source: Department of Natural Resources

Telephone: 614-265-1044

## HYDROGEOLOGIC INFORMATION

### **AQUIFLOW<sup>R</sup> Information System**

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### **Geologic Age and Rock Stratigraphic Unit**

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### **STATSGO: State Soil Geographic Database**

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### **SSURGO: Soil Survey Geographic Database**

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### **PWS:** Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### **PWS ENF:** Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### **USGS Water Wells:** USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

### STATE RECORDS

#### **Public Water System Data**

Source: Ohio Environmental Protection Agency

Telephone: 614-644-3677

The database includes community, transient noncommunity and nontransient noncommunity water wells; and source treatment unit locations.

#### **Water Well Database**

Source: Department of Natural Resources

Telephone: 614-265-6747

## OTHER STATE DATABASE INFORMATION

### RADON

#### **State Database: OH Radon**

Source: Department of Health

Telephone: 614-644-2727

Radon Statistics for Zip Code Areas

#### **Area Radon Information**

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

#### **EPA Radon Zones**

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

### OTHER

#### **Airport Landing Facilities:** Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

#### **Epicenters:** World earthquake epicenters, Richter 5 or greater

## EDR PUR-IQ<sup>®</sup> Report

*"the intelligent way to conduct historical research"*

for  
SSG Roy Clifton Scouten USARC  
271 HEDGES STREET  
MANSFIELD, OH 44902  
Lat./Long. 40.75100 / 82.50990  
EDR Inquiry # 01714247.98r

The EDR PUR-IQ report facilitates historical research planning required to complete the Phase I ESA process. The report identifies the *likelihood* of prior use coverage by searching proprietary EDR-Prior Use Reports<sup>®</sup> comprising nationwide information on: city directories, fire insurance maps, aerial photographs, historical topographic maps, flood maps and National Wetland Inventory maps.

**Potential for EDR Historical (Prior Use) Coverage** - Coverage in the following historical information sources may be used as a guide to develop your historical research strategy:

- 1. City Directory:** Coverage exists for portions of MANSFIELD, OH for 1909, 1959, 1961, 1963, 1965, 1967, 1969, 1973, 1975, 1976, 1978, 1980, 1986-1990, 1992-1997
- 2. Fire Insurance Map:** When you order online any EDR Package or the EDR Radius Map with EDR Sanborn Map Search/Print, you receive site specific Sanborn Map coverage information at no charge.
- 3. Aerial Photograph:** Aerial photography coverage may exist for portions of Richland County. Please contact your EDR Account Executive for information about USGS photos available through EDR.
- 4. Topographic Map:** The USGS 7.5 min. quad topo sheet(s) associated with this site:

Historical: Coverage exists for Richland County

Current: Target Property: TP | 1982 | 40082-G5 Mansfield North, OH

Additional required for 1 Mile radius: E | 1982 | 40082-G4 Pavonia, OH  
SE | 1982 | 40082-F4 Lucas, OH  
S | 1982 | 40082-F5 Mansfield South, OH

EDR's network of professional researchers, located throughout the United States, accesses the most extensive national collections of city directory, fire insurance maps, aerial photographs and historical topographic map resources available for MANSFIELD, OH. These collections may be located in multiple libraries throughout the country. To ensure maximum coverage, EDR will often assign researchers at these multiple locations on your behalf. Please call or fax your EDR representative to authorize a search.

# EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDRs professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

This document reports that EDR searched its own collection or select outside repository collections of aerial photography, and based on client-supplied target property information, aerial photography, including the target property was not deemed reasonably ascertainable by Environmental Data Resources, Inc. (EDR). This no coverage determination reflects a search only of aerial photography repository collections that EDR accessed. It can not be concluded from this search that no coverage for the target property exists anywhere, in any collection.

## NO COVERAGE

***Thank you for your business.***  
Please contact EDR at 1-800-352-0050  
with any questions or comments.

## USER'S GUIDE

This User's Guide provides guidelines for accessing Sanborn Map® images and for transferring them to your Word Processor.

### Reading Sanborn Maps

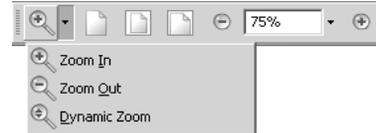

- Sanborn Maps document historical property use by displaying property information through words, abbreviations, and map symbols. The Sanborn Map Key provides information to help interpret the symbols and abbreviations used on Sanborn Maps. The Key is available from EDR's Web Site at: <http://www.edrnet.com/reports/samples/key.pdf>

### Organization of Electronic Sanborn Image File

- Sanborn Map Report, listing years of coverage
- User's Guide
- Oldest Sanborn Map Image
- Most recent Sanborn Map Image

### Navigating the Electronic Sanborn Image File

1. Open file on screen.
2. Identify TP (Target Property) on the most recent map.
3. Find TP on older printed images.
4. Using Acrobat® Reader®, zoom to 250% in order to view more clearly. (200-250% is the approximate equivalent scale of hardcopy Sanborn Maps.)
  - A. On the menu bar, click "View" and then "Zoom to..."
  - B. Or, use the magnifying tool and drag a box around the TP

### Printing a Sanborn Map From the Electronic File

- EDR recommends printing images at 300 dpi (300 dpi prints faster than 600 dpi)
- To print only the TP area, cut and paste from Acrobat to your word processor application.

#### Acrobat Versions 6 and 7

1. Go to the menu bar
2. Click the "Select Tool"
3. Draw a box around the area selected
4. "Right click" on your mouse
5. Select "Copy Image to Clipboard"
6. Go to Word Processor such as Microsoft Word, paste and print.

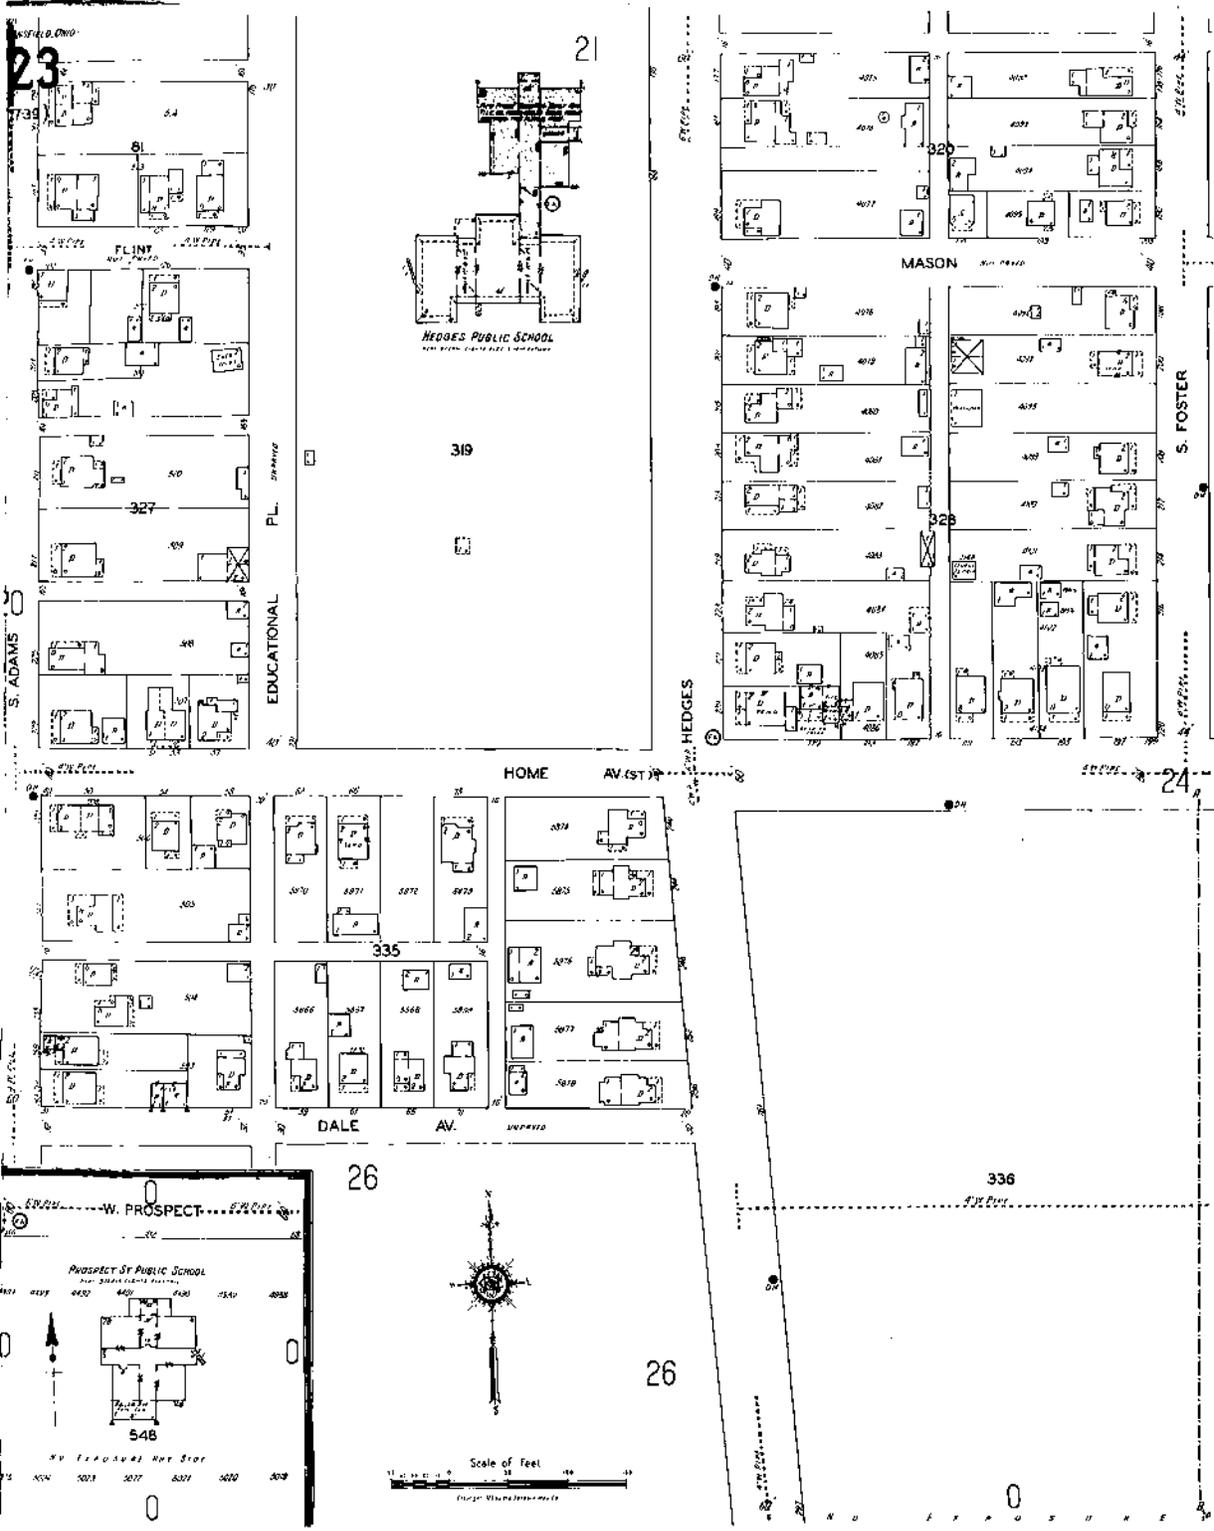

#### Acrobat Version 5

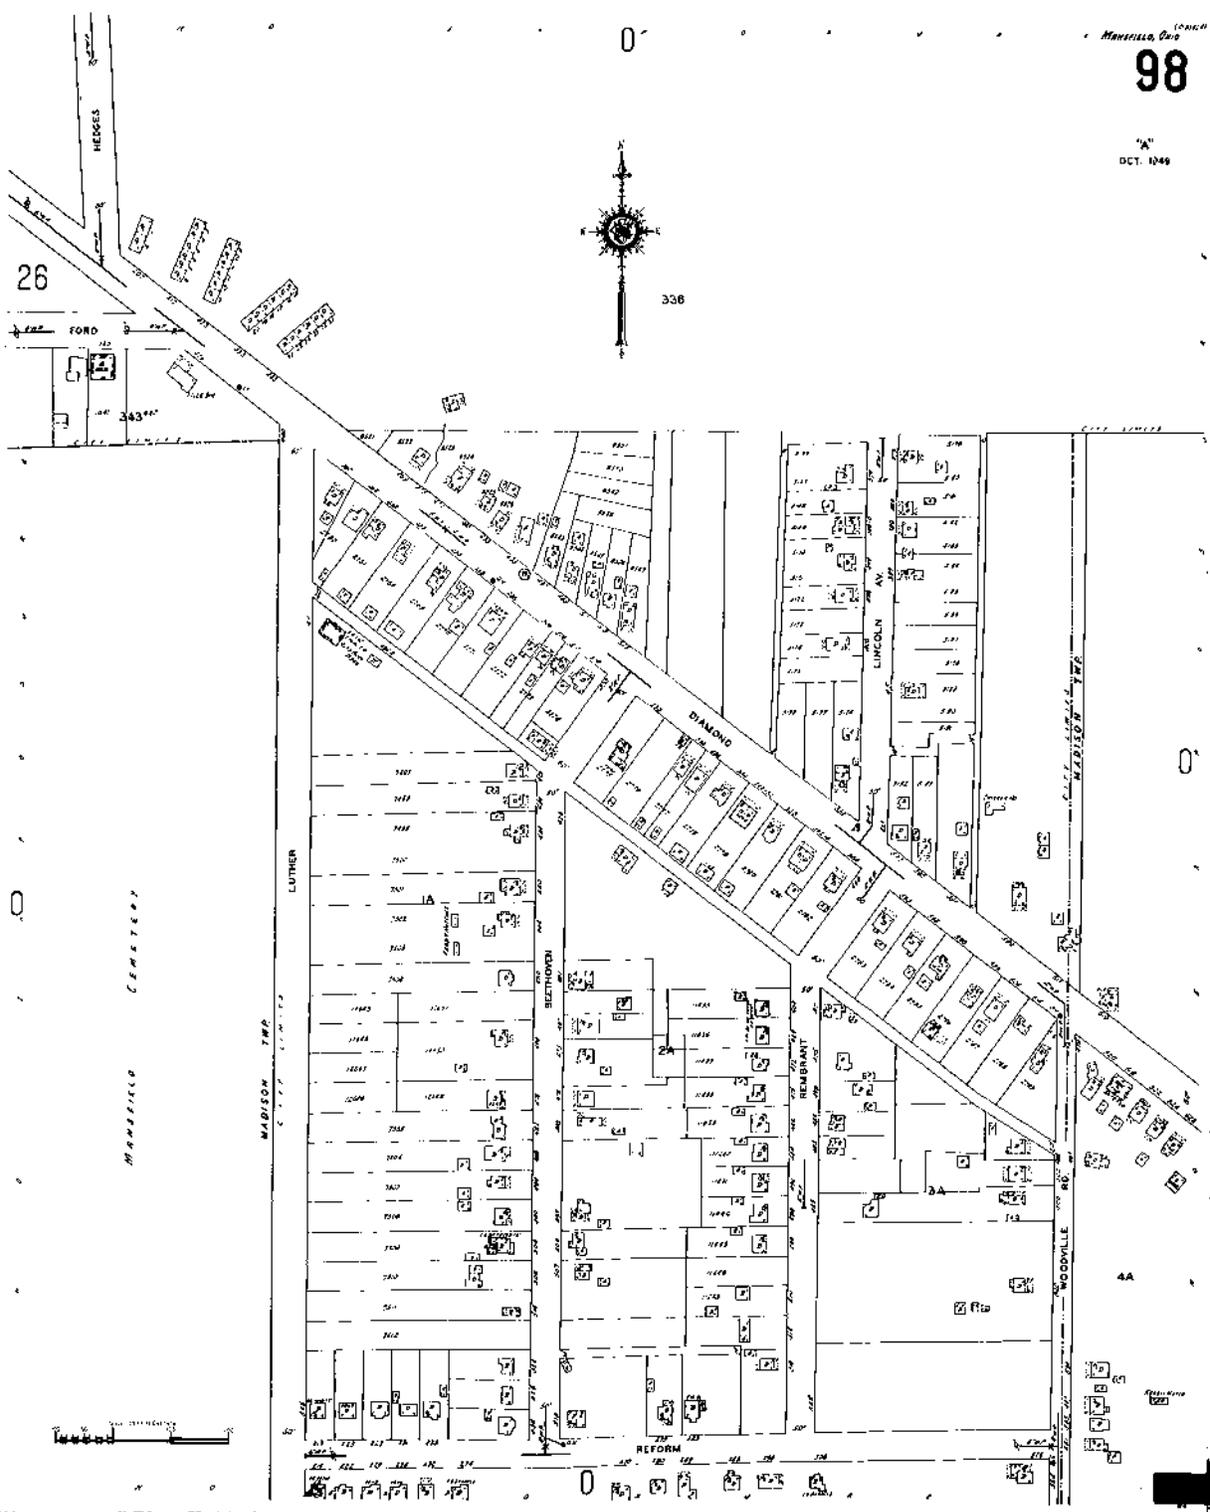

1. Go to the menu bar
2. Click the "Graphics Select Tool"
3. Draw a box around the area selected
4. Go to "Menu"
5. Highlight "Edit"
6. Highlight "Copy"
7. Go to Word Processor such as Microsoft Word, paste and print.

### Important Information about Email Delivery of Electronic Sanborn Map Images

- Images are grouped into one file, up to 2MB.
- In cases where in excess of 6-7 map years are available, the file size typically exceeds 2MB. In these cases, you will receive multiple files, labeled as "1 of 3", "2 of 3", etc. including all available map years.
- Due to file size limitations, certain ISPs, including AOL, may occasionally delay or decline to deliver files. Please contact your ISP to identify their specific file size limitations.

# EDR City Directory Abstract

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening report designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

***Thank you for your business.***
